workflow packet
acceptance checklist
evidence bundle template
non-claim review template
public-entrypoint review template
estimate-impact review template
completion checkpoint
```

Blocked without separate request:

```
launch_console=0
run_host_inventory=0
capture_transcripts=0
change_public_product_readiness=0
```

Tier 2: Runtime and Nucleus effect-boundary planning

Priority:

```
second planning priority
```

Purpose:

```
define how future real task execution would be requested, previewed,
guarded, logged, denied, and reviewed before any mutation-capable behavior exists
```

Current state:

```
Nucleus_real_task_execution=12_percent
Runtime_operating_system_universe_direction=25_percent
effect_authority_granted=0
```

Recommended planning package:

```
Nucleus effect-contract and runtime-denial gate planning package
```

This should remain contract-level until explicit implementation work is requested.

Tier 3: Seal evidence and authority boundaries

Priority:

```
third planning priority
```

Purpose:

```
clarify the line between local evidence records, trust receipts, signing
authority, publication authority, and future verification behavior
```

Current state:

```
Seal_local_evidence_layer=39_percent
cryptographic_authority_claimed=0
receipt_publication_claimed=0
```

Recommended planning package:

```
Seal evidence-authority promotion gate map
```

This should not imply cryptographic enforcement, public audit readiness, or signing authority.

Tier 4: Nadia offline AI readiness boundaries

Priority:

```
fourth planning priority
```

Purpose:

```
keep offline AI foundation progress separate from model loading, prompt
evaluation, token generation, tool execution, and survivor-support claims
```

Current state:

```
Nadia_offline_AI_foundation=74_percent
inference_claimed=0
tool_execution_claimed=0
survivor_QA_claimed=0
```

Recommended planning package:

```
Nadia prompt-evaluation non-claim and evidence gate map
```

This should preserve the distinction between foundation contracts and actual inference behavior.

Tier 5: Language and representation stability

Priority:

```
fifth planning priority
```

Purpose:

```
stabilize the relationship between L-UI, Lat, LIR, constrained C++, and
future runtime authority without implying executable completeness
```

Current state:

```
L_UI_parser_AST_string_foundation=87_percent
```

```
Lat_language=27_percent
LIR=24_percent
C_CPP_foundation_direction=22_percent
Constrained_CPP_authority_layer=5_percent
```

Recommended planning package:

```
Lat/LIR representation-to-effect boundary map
```

This should focus on representation contracts, fixture expectations, and denial behavior.

Tier 6: Security-hardening evidence gates

Priority:

```
sixth planning priority
```

Purpose:

```
prevent security language from outrunning implemented controls, test evidence,
threat modeling, rollback behavior, and recovery behavior
```

Current state:

```
Security_hardening_implementation=9_percent
malware_prevention_claimed=0
ransomware_prevention_claimed=0
sandboxing_claimed=0
production_security_boundary_claimed=0
```

Recommended planning package:

```
security-hardening non-claim and evidence-gate planning package
```

This should stay defensive, evidence-bound, and non-promotional.

Recommended next move

Recommended next move:

```
create the Latticra Console read-only host inventory and evaluator workflow
planning package
```

Reason:

```
it is the nearest neighbor to the completed Panel-guided planning package,
supports public evaluator clarity, and does not require runtime effects,
security enforcement, AI inference, mutation, or product-readiness promotion
```

Do not start yet

Do not start the following from this map:

```
evidence_capture
command_execution
local_app_launch
host_inventory_run
guard_implementation
test_execution
estimate_update
public_entrypoint_update
product_readiness_promotion
runtime_authority
security_hardening_claim
AI_inference_claim
```

Those require separate explicit requests and evidence-producing work.

Non-claims

This map does not capture evidence, run commands, launch Panel, launch Console, inspect a host, run inventory, implement guards, run tests, validate workflows, update public entry points, change estimates, provide product readiness, provide runtime authority, provide task execution, grant mutation authority, provide cryptographic authority, provide signing authority, publish receipts, execute models, evaluate prompts, generate tokens, execute tools, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records strategy priority only.

docs/strategy/2026-05-26-1707-cdt-console-read-only-host-inventory-workflow-packet.md

Source title: Latticra Console Read-Only Host Inventory Workflow Packet

Lines: 241 | Words: 702 | SHA-256: 10e2c2e011d8553df07a61f3520091f6acc8436cdd9b40669390f085a30294cc

Latticra Console Read-Only Host Inventory Workflow Packet

Status: planning workflow packet Created: 2026-05-26 17:07 CDT Decision: select a contract-only Console host-inventory evaluator workflow Promotion decision: no Console, host-inventory, host-adapter, product-readiness, runtime, security, or OS-base promotion recommended Scope: planning packet for a future evaluator workflow around Latticra Console read-only host inventory.

Purpose

This packet opens the next planning lane recommended by the overall strategy priority map.

It defines how a future evaluator should review Latticra Console host-inventory posture while the project remains inside metadata-only, read-only, no-effect boundaries.

Source records

This packet follows:

```
docs/strategy/2026-05-26-1702-cdt-overall-strategy-priority-map.md
docs/LATTICRA_CONSOLE_FOUNDATION.md
docs/status/LATTICRA_CONSOLE_FOUNDATION_STATUS.md
STATUS.md
docs/status/CURRENT_STATUS.md
README.md
```

Current Console posture

Current source posture:

```
console_name=Latticra Console
short_name=LC
component_key=latticra_console
standalone_installable=1
standalone_requires_panel=0
standalone_command_wrapper=latticra-lc
host_inventory_contract_profile=lc-host-inventory-v0
host_adapter_contract_profile=lc-host-adapter-v0
runtime_boundary_bound=1
seal_capability_labels_bound=1
command_registry_no_effect=1
```

Current host-inventory posture:

```
contract_profile=lc-host-inventory-v0
contract_status=metadata-only
required_before_host_embedding=1
host_adapter_present=0
inventory_schema_status=planned
inventory_performed=0
```

```
inventory_artifact_present=0
inventory_receipt_required=1
operator_consent_required=1
runtime_boundary_required=1
seal_capability_labels_required=1
promotion_gate=host_inventory_contract_receipt_before_host_adapter
```

Current authority floor:

```
host_probe_allowed=0
host_process_launch_allowed=0
host_file_read_allowed=0
host_file_write_allowed=0
host_mutation_allowed=0
network_allowed=0
runtime_enforcement_allowed=0
boot_allowed=0
```

Workflow selection

Selected workflow:

```
contract_only_console_host_inventory_evaluator_workflow
```

Rejected workflow:

```
live_host_inventory_capture
```

Reason:

```
the current Console host-inventory lane is intentionally metadata-only;
the useful evaluator workflow is to verify the contract, denial posture,
future-gate language, and non-claims before any host observation is allowed
```

Intended evaluator question

The workflow should answer:

```
Can an evaluator understand that Latticra Console has a planned host-inventory
contract surface while also understanding that no host inventory, host probing,
host process launch, file reading, file writing, host mutation, network use,
runtime enforcement, boot behavior, or product readiness is currently claimed?
```

Planned evaluator path

The future workflow should be organized as:

1. Start at the current public Latticra status and estimate posture.
2. Find the Console foundation and Console status records.
3. Confirm lc host-inventory is described as an inspectable contract command.
4. Confirm the planned future inventory scope is narrow and reviewable.
5. Confirm excluded scope blocks secrets, private files, network scanning, process launch, kernel change, and system mutation.
6. Confirm current host-inventory fields report inventory_performed=0.
7. Confirm host probing, host process launch, file read, file write, host mutation, network, runtime enforcement, and boot authority remain denied.
8. Confirm host-adapter promotion remains blocked by contract receipt and inventory gates.
9. Confirm receipt paths remain metadata-only and unsigned.
10. Stop before evidence capture, command execution, implementation, estimate updates, or public-entrypoint changes.

Future evidence surfaces

If a separate evidence-capture request is made later, the likely surfaces are:

```
docs/LATTICRA_CONSOLE_FOUNDATION.md
docs/status/LATTICRA_CONSOLE_FOUNDATION_STATUS.md
latticra_console_report host-inventory
latticra-lc host-inventory
latticra_console_report host-adapter
latticra-lc host-adapter
latticra_console_report receipt-request
latticra-lc receipt-request
```

This packet does not run or validate those commands.

Review gates

Before any future host-inventory posture can move beyond this workflow, require:

```
acceptance_checklist=required
evidence_bundle_template=required
non_claim_review=required
public_entrypoint_review=required
estimate_impact_review=required
completion_checkpoint=required
```

Before any future live inventory is allowed, additionally require:

```
operator_consent_model=required
inventory_schema=required
field_allowlist=required
field_denial_tests=required
fixture_host_profiles=required
receipt_materialization_review=required
host_adapter_denial_review=required
runtime_boundary_review=required
security_non_claim_review=required
```

Package plan

The planning package should add, in order:

```
workflow packet
acceptance checklist
evidence bundle template
non-claim review template
public-entrypoint review template
estimate-impact review template
review package index
completion checkpoint
```

Current package status:

```
workflow_packet_created=1
acceptance_checklist_created=1
evidence_bundle_template_created=1
non_claim_review_template_created=1
public_entrypoint_review_template_created=1
estimate_impact_review_template_created=1
review_package_index_created=1
completion_checkpoint_created=1
```

Recommended next planning move

Recommended next planning move:

```
begin the Tier 2 Nucleus effect-contract and runtime-denial gate planning package
```

Reason:

```
the workflow, acceptance criteria, evidence bundle shape, non-claim review
shape, public-entrypoint review shape, estimate-impact review shape, and review
package index are now selected and closed by the completion checkpoint; the
overall priority map names runtime and Nucleus effect-boundary planning as the
next planning priority while preserving contract-level, no-effect boundaries
```

Do not start yet

Do not start the following from this packet:

```
launch_console
run_latticra_lc
run_latticra_console_report
```

```
run_host_inventory
probe_host
read_host_files
write_host_files
scan_network
launch_host_process
create_inventory_artifact
write_receipt
request_signature
enable_host_adapter
change_estimates
update_public_entrypoints
promote_product_readiness
```

Non-claims

This packet does not run Console, launch Panel, launch a shell, launch a host process, inspect a host, probe a host, read host files, write host files, scan a network, mutate a host, create an inventory artifact, create a receipt, request a signature, sign a receipt, enable a host adapter, enforce runtime policy, boot hardware, validate product readiness, update estimates, update public entry points, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records workflow planning only.

docs/strategy/2026-05-26-1732-cdt-console-read-only-host-inventory-acceptance-checklist.md

Source title: Latticra Console Read-Only Host Inventory Acceptance Checklist

Lines: 349 | Words: 775 | SHA-256: 03ee3ec2471792a906d41dbf648e91a0e86f6ac059c41248b8fbe5de0e49a683

Latticra Console Read-Only Host Inventory Acceptance Checklist

Status: draft acceptance checklist Created: 2026-05-26 17:32 CDT Decision: checklist only Promotion decision: no Console, host-inventory, host-adapter, product-readiness, runtime, security, or OS-base promotion recommended Scope: acceptance criteria for future Console read-only host-inventory evaluator workflow evidence.

Purpose

This checklist defines the conditions that must be satisfied before the Console read-only host-inventory evaluator workflow can be treated as reviewable.

It does not claim the evidence exists yet. It defines how future evidence should be reviewed.

Source workflow

This checklist follows:

```
docs/strategy/2026-05-26-1707-cdt-console-read-only-host-inventory-workflow-packet.md
```

The selected workflow is:

```
contract_only_console_host_inventory_evaluator_workflow
```

The rejected workflow is:

```
live_host_inventory_capture
```

Review result labels

Use one result label when applying this checklist:

```
not_started
blocked
partial_evidence
```

```
evidence_ready_for_review
accepted_for_non_claim_review
accepted_for_public_entrypoint_review
accepted_for_estimate_review
rejected
```

This checklist alone cannot produce accepted_for_estimate_review; that result requires actual workflow evidence plus non-claim, public-entrypoint, and estimate-impact review.

Required evaluator boundary

Acceptance requires:

```
target_evaluator_named=1
technical_evaluator_scope=1
local_operator_scope=1
nontechnical_user_scope=0
production_operator_scope=0
daily_driver_scope=0
security_reliance_scope=0
```

Required reviewer question:

```
Can the intended evaluator understand that this is a contract-only Console
host-inventory review, not a live host scan or production product workflow?
```

Required source entry

Acceptance requires visible entry into:

```
current_project_status
current_estimate_posture
Console_foundation_record
Console_status_record
Console_host_inventory_contract
Console_host_adapter_contract
Console_receipt_request_contract
runtime_boundary_binding
Seal_capability_label_binding
```

Required evidence fields:

```
status_surface_reference:
foundation_record_reference:
status_record_reference:
workflow_packet_reference:
reviewer_note:
```

Required contract identity

Acceptance requires evidence that the host-inventory surface is contract-only:

```
contract_profile=lc-host-inventory-v0
contract_status=metadata-only
required_before_host_embedding=1
host_adapter_present=0
inventory_schema_status=planned
inventory_performed=0
inventory_artifact_present=0
inventory_receipt_required=1
operator_consent_required=1
runtime_boundary_required=1
seal_capability_labels_required=1
promotion_gate=host_inventory_contract_receipt_before_host_adapter
```

Required reviewer question:

```
Can the evaluator identify the difference between an inventory contract and an
inventory artifact?
```

Required command-surface clarity

Acceptance requires the future evidence bundle to identify intended command surfaces without running them as part of this checklist:

```
latticra_console_report host-inventory
latticra-lc host-inventory
latticra_console_report host-adapter
```

```
latticra-lc host-adapter
latticra_console_report receipt-request
latticra-lc receipt-request
```

Required evidence fields:

```
command_surface_listed=1
commands_run_by_this_checklist=0
command_output_attached=0|1
command_output_source:
```

If command output is attached later, it must be produced by a separate explicit evidence-capture request.

Required allowed-scope visibility

Acceptance requires the planned future inventory scope to be visible and narrow:

```
allowed_future_scope=os_family,kernel_version,cpu_arch,memory_class,filesystem_roots,user_scope,
prefix_scope
```

Required reviewer question:

```
Can the evaluator tell that the planned inventory is limited to host posture
metadata rather than file contents, secrets, network state, or process behavior?
```

Required excluded-scope visibility

Acceptance requires excluded scope to be visible:

```
excluded_future_scope=secrets,private_files,network_scan,process_launch,kernel_change,system_mut
ation
```

Required denial labels:

```
secrets_allowed=0
private_file_read_allowed=0
network_scan_allowed=0
process_launch_allowed=0
kernel_change_allowed=0
system_mutation_allowed=0
```

Required no-effect authority floor

Acceptance requires all current authority-denial fields to remain visible:

```
host_probe_allowed=0
host_process_launch_allowed=0
host_file_read_allowed=0
host_file_write_allowed=0
host_mutation_allowed=0
network_allowed=0
runtime_enforcement_allowed=0
boot_allowed=0
seal_capability_grants_authority=0
```

Failure to show any denial field should produce:

```
blocked_missing_authority_floor
```

Required receipt boundary

Acceptance requires the receipt path to stay metadata-only:

```
receipt_request_contract_status=metadata-only-contract
receipt_request_contract_present=1
receipt_payload_schema_present=1
receipt_payload_artifact_draft_present=1
receipt_payload_artifact_review_present=1
receipt_payload_materialization_plan_present=1
draft_review_receipt_present=0
materialization_preconditions_met=0
materialization_allowed=0
payload_artifact_present=0
payload_materialized=0
seal_signature_request_ready=0
seal_signature_request_present=0
seal_signing_authority_present=0
receipt_written=0
```

```
receipt_signed=0
```

Required reviewer question:

```
Can the evaluator see that receipt planning exists while signed receipt
authority and payload materialization remain unavailable?
```

Required host-adapter gate

Acceptance requires host-adapter progression to remain blocked:

```
host_adapter_contract_status=metadata-only-contract
host_adapter_contract_present=1
host_adapter_enabled=0
host_adapter_present=0
host_adapter_loaded=0
host_embedding_contract_required=1
read_only_host_inventory_contract_required=1
host_embedding_contract_receipt_required=1
host_inventory_contract_receipt_required=1
receipt_required_before_host_adapter=1
promotion_gate=host_adapter_contract_receipts_and_inventory
```

The checklist must reject any evidence that treats a host-inventory contract as permission to enable the host adapter.

Required failure-state coverage

Acceptance requires declared handling for:

```
source_record_missing
host_inventory_contract_missing
host_inventory_contract_ambiguous
denial_field_missing
excluded_scope_missing
receipt_boundary_missing
host_adapter_gate_missing
command_output_missing
command_output_implies_live_scan
public_text_overclaims_inventory
estimate_change_requested_without_evidence
manual_review_required
```

Required non-claim visibility

Acceptance requires the evidence package to preserve these non-claims:

```
live_host_inventory_claim=0
host_probe_claim=0
host_file_read_claim=0
host_file_write_claim=0
host_mutation_claim=0
network_scan_claim=0
host_adapter_claim=0
runtime_enforcement_claim=0
boot_claim=0
security_hardening_claim=0
product_readiness_claim=0
production_support_claim=0
```

Acceptance decision

The checklist may return evidence_ready_for_review only if:

```
source_entry_visible=1
contract_identity_visible=1
command_surface_clarity=1
allowed_scope_visible=1
excluded_scope_visible=1
authority_floor_visible=1
receipt_boundary_visible=1
host_adapter_gate_visible=1
failure_states_declared=1
non_claims_visible=1
commands_run_by_this_checklist=0
live_host_inventory_performed=0
estimate_change_recommended=0
product_readiness_promotion_recommended=0
```

The checklist must return rejected if:

```
host_probe_performed=1
host_file_read_performed=1
host_file_write_performed=1
host_mutation_performed=1
network_scan_performed=1
host_adapter_enabled=1
receipt_signed=1
public_claim_overstates_inventory=1
```

Recommended next planning move

Recommended next planning move:

```
begin the Tier 2 Nucleus effect-contract and runtime-denial gate planning package
```

Reason:

```
the acceptance criteria, evidence bundle shape, non-claim review shape, and
public-entrypoint review shape, estimate-impact review shape, and review
package index now define what must be reviewed and the completion checkpoint
closes the package; the next useful planning lane is the Tier 2 Nucleus
effect-boundary package
```

Non-claims

This checklist does not run Console, run latticra-lc, run latticra_console_report, inspect a host, probe a host, read host files, write host files, scan a network, launch a host process, mutate a host, create an inventory artifact, create a receipt, request a signature, sign a receipt, enable a host adapter, enforce runtime policy, boot hardware, validate product readiness, update estimates, update public entry points, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records acceptance criteria only.

docs/strategy/2026-05-26-1736-cdt-console-read-only-host-inventory-evidence-bundle-template.md

Source title: Latticra Console Read-Only Host Inventory Evidence Bundle Template

Lines: 394 | Words: 720 | SHA-256: 819a5be9a13c57c162875ca4dd80893b22c5ffc66f6422a7028db0bde582739f

Latticra Console Read-Only Host Inventory Evidence Bundle Template

Status: draft evidence-bundle template Created: 2026-05-26 17:36 CDT Decision: template only Promotion decision: no Console, host-inventory, host-adapter, product-readiness, runtime, security, or OS-base promotion recommended Scope: evidence bundle structure for future Console read-only host-inventory evaluator workflow review.

Purpose

This template defines the evidence bundle that would be required before the Console read-only host-inventory evaluator workflow can be reviewed.

It does not claim any evidence has been captured. It defines the future bundle shape only.

Source checklist

This template follows:

```
docs/strategy/2026-05-26-1732-cdt-console-read-only-host-inventory-acceptance-checklist.md
```

The source workflow remains:

```
contract_only_console_host_inventory_evaluator_workflow
```

The rejected workflow remains:

```
live_host_inventory_capture
```

Bundle header

```
bundle name:
created:
review status: not_started|blocked|partial_evidence|evidence_ready_for_review|accepted_for_non_c
laim_review|accepted_for_public_entrypoint_review|accepted_for_estimate_review|rejected
target evaluator:
evaluated platform:
repository commit:
workflow packet:
acceptance checklist:
evidence bundle template:
review owner:
```

accepted_for_estimate_review must not be used until a reviewer confirms that all required evidence exists and the non-claim, public-entrypoint, and estimate-impact reviews are present.

Evidence manifest

Required manifest fields:

```
status_entry_record:
console_foundation_record:
console_status_record:
host_inventory_contract_record:
host_adapter_contract_record:
receipt_boundary_record:
command_surface_record:
allowed_scope_record:
excluded_scope_record:
authority_floor_record:
host_adapter_gate_record:
failure_state_record:
known_limitations_record:
support_boundary_record:
non_claim_review_record:
public_entrypoint_review_record:
estimate_impact_review_record:
```

Each record should be a path, transcript id, status document, or explicit missing label.

Status and source-entry record

Required fields:

```
status_surface_reference:
estimate_surface_reference:
Console_foundation_record_reference:
Console_status_record_reference:
workflow_packet_reference:
acceptance_checklist_reference:
contract_only_workflow_visible=0|1
live_inventory_rejected_visible=0|1
product_readiness_limitation_visible=0|1
security_hardening_limitation_visible=0|1
evaluator_review_note:
record_status: missing|partial|complete
```

Contract identity record

Required fields:

```
contract_profile=lc-host-inventory-v0
contract_status=metadata-only
required_before_host_embedding=1
host_adapter_present=0
inventory_schema_status=planned
inventory_performed=0
inventory_artifact_present=0
inventory_receipt_required=1
operator_consent_required=1
runtime_boundary_required=1
```

```
seal_capability_labels_required=1
promotion_gate=host_inventory_contract_receipt_before_host_adapter
contract_review_note:
record_status: missing|partial|complete
```

The record must distinguish the inventory contract from any future inventory artifact.

Command surface record

Required fields:

```
command_surface_listed=0|1
latticra_console_report_host_inventory_listed=0|1
latticra_lc_host_inventory_listed=0|1
latticra_console_report_host_adapter_listed=0|1
latticra_lc_host_adapter_listed=0|1
latticra_console_report_receipt_request_listed=0|1
latticra_lc_receipt_request_listed=0|1
commands_run_by_this_bundle=0
command_output_attached=0|1
command_output_source:
command_surface_review_note:
record_status: missing|partial|complete
```

If command output is attached later, it must come from a separate explicit evidence-capture request.

Allowed-scope record

Required fields:

```
allowed_future_scope_visible=0|1
os_family_scope_visible=0|1
kernel_version_scope_visible=0|1
cpu_arch_scope_visible=0|1
memory_class_scope_visible=0|1
filesystem_roots_scope_visible=0|1
user_scope_visible=0|1
prefix_scope_visible=0|1
host_posture_metadata_only=0|1
allowed_scope_review_note:
record_status: missing|partial|complete
```

Excluded-scope record

Required fields:

```
excluded_future_scope_visible=0|1
secrets_allowed=0
private_file_read_allowed=0
network_scan_allowed=0
process_launch_allowed=0
kernel_change_allowed=0
system_mutation_allowed=0
excluded_scope_review_note:
record_status: missing|partial|complete
```

Authority-floor record

Required fields:

```
host_probe_allowed=0
host_process_launch_allowed=0
host_file_read_allowed=0
host_file_write_allowed=0
host_mutation_allowed=0
network_allowed=0
runtime_enforcement_allowed=0
boot_allowed=0
seal_capability_grants_authority=0
authority_floor_review_note:
record_status: missing|partial|complete
```

Any missing denial field should block the bundle with:

```
blocked_missing_authority_floor
```

Receipt boundary record

Required fields:

```
receipt_request_contract_status=metadata-only-contract
receipt_request_contract_present=1
receipt_payload_schema_present=1
receipt_payload_artifact_draft_present=1
receipt_payload_artifact_review_present=1
receipt_payload_materialization_plan_present=1
draft_review_receipt_present=0
materialization_preconditions_met=0
materialization_allowed=0
payload_artifact_present=0
payload_materialized=0
seal_signature_request_ready=0
seal_signature_request_present=0
seal_signing_authority_present=0
receipt_written=0
receipt_signed=0
receipt_boundary_review_note:
record_status: missing|partial|complete
```

Host-adapter gate record

Required fields:

```
host_adapter_contract_status=metadata-only-contract
host_adapter_contract_present=1
host_adapter_enabled=0
host_adapter_present=0
host_adapter_loaded=0
host_embedding_contract_required=1
read_only_host_inventory_contract_required=1
host_embedding_contract_receipt_required=1
host_inventory_contract_receipt_required=1
receipt_required_before_host_adapter=1
promotion_gate=host_adapter_contract_receipts_and_inventory
host_adapter_gate_review_note:
record_status: missing|partial|complete
```

The bundle must reject evidence that treats the host-inventory contract as permission to enable the host adapter.

Failure-state record

Required failure labels:

```
source_record_missing:
host_inventory_contract_missing:
host_inventory_contract_ambiguous:
denial_field_missing:
excluded_scope_missing:
receipt_boundary_missing:
host_adapter_gate_missing:
command_output_missing:
command_output_implies_live_scan:
public_text_overclaims_inventory:
estimate_change_requested_without_evidence:
manual_review_required:
```

For every failure label, record:

```
host_probe_performed=0
host_file_read_performed=0
host_file_write_performed=0
host_mutation_performed=0
network_scan_performed=0
host_adapter_enabled=0
receipt_signed=0
remediation_or_manual_review_note:
```

Known limitations record

Required visible limitations:

```
not_live_host_inventory=1
not_host_probe=1
```

```
not_file_reader=1
not_network_scanner=1
not_host_adapter=1
not_runtime_enforcement=1
not_boot_behavior=1
not_a_production_product=1
not_a_security_boundary=1
not_security_hardening=1
not_malware_prevention=1
not_ransomware_prevention=1
record_status: missing|partial|complete
```

Support boundary record

Required fields:

```
supported_evaluator:
supported_platforms_for_this_evidence:
unsupported_platforms:
known_setup_limits:
known_runtime_limits:
documentation_issue_path:
security_issue_path:
record_status: missing|partial|complete
```

Review gate records

Non-claim review:

```
non_claim_review_present=0|1
non_claim_review_path:
claim_expansion_detected=0|1
```

Public-entrypoint review:

```
public_entrypoint_review_present=0|1
README_update_required=0|1
STATUS_update_required=0|1
CURRENT_STATUS_update_required=0|1
project_notes_update_required=0|1
announcement_review_required=0|1
```

Estimate-impact review:

```
estimate_impact_review_present=0|1
estimate_change_recommended=0|1
reason:
```

Bundle completeness rule

The bundle is complete only if:

```
all_required_records_present=1
all_required_records_complete=1
non_claim_review_present=1
public_entrypoint_review_present=1
estimate_impact_review_present=1
claim_expansion_detected=0
commands_run_by_this_bundle=0
live_host_inventory_performed=0
host_probe_performed=0
host_file_read_performed=0
host_file_write_performed=0
host_mutation_performed=0
network_scan_performed=0
host_adapter_enabled=0
receipt_signed=0
```

This template result:

```
bundle_complete=0
estimate_change_recommended=0
public_entrypoint_change_recommended=0
reason=this file defines the future bundle shape only
```

Recommended next planning move

Recommended next planning move:

```
begin the Tier 2 Nucleus effect-contract and runtime-denial gate planning package
```

Reason:

```
the evidence bundle, non-claim review, and public-entrypoint review shapes are
now joined by the estimate-impact review shape and review package index; the
completion checkpoint closes this package, and the next useful planning lane is
the Tier 2 Nucleus effect-boundary package
```

Non-claims

This template does not provide workflow evidence, run Console, run latticra-lc, run latticra_console_report, inspect a host, probe a host, read host files, write host files, scan a network, launch a host process, mutate a host, create an inventory artifact, create a receipt, request a signature, sign a receipt, enable a host adapter, enforce runtime policy, boot hardware, validate product readiness, update estimates, update public entry points, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records an evidence-bundle structure only.

docs/strategy/2026-05-26-1757-cdt-console-read-only-host-inventory-non-claim-review-template.md

Source title: Latticra Console Read-Only Host Inventory Non-Claim Review Template

Lines: 385 | Words: 978 | SHA-256: 17e3a81c6ecd029f5fd75b45e751ca64ab48abac9e4fd125edda1c8cf34eee13

Latticra Console Read-Only Host Inventory Non-Claim Review Template

Status: draft non-claim review template Created: 2026-05-26 17:57 CDT Decision: review template only Promotion decision: no Console, host-inventory, host-adapter, product-readiness, runtime, security, or OS-base promotion recommended Scope: non-claim review for future Console read-only host-inventory evaluator workflow evidence.

Purpose

This template defines the non-claim review required before any Console read-only host-inventory workflow evidence can be used in public-entrypoint, estimate-impact, or product-readiness discussions.

It does not perform the review. It defines the review shape only.

Source bundle

This template follows:

```
docs/strategy/2026-05-26-1736-cdt-console-read-only-host-inventory-evidence-bundle-template.md
```

The source checklist remains:

```
docs/strategy/2026-05-26-1732-cdt-console-read-only-host-inventory-acceptance-checklist.md
```

The target workflow remains:

```
contract_only_console_host_inventory_evaluator_workflow
```

The rejected workflow remains:

```
live_host_inventory_capture
```

Review header

```
review name:
created:
reviewer:
review status: not_started|blocked|partial|complete|rejected
workflow evidence bundle:
acceptance checklist:
evidence bundle template:
evaluated platform:
repository commit:
```

Required review outcome

Use one outcome:

```
claim_safe_for_current_scope
claim_safe_with_required_edits
claim_unsafe_blocked
insufficient_evidence
```

This template result:

```
review_performed=0
claim_expansion_detected=0
product_readiness_promotion_recommended=0
estimate_change_recommended=0
public_entrypoint_change_recommended=0
reason=this file defines the future review shape only
```

Required source checks

The reviewer must inspect:

```
README.md
STATUS.md
docs/status/CURRENT_STATUS.md
docs/project_notes/CURRENT_DIRECTION.md
docs/project_notes/UPCOMING_WORK.md
docs/strategy/README.md
docs/strategy/2026-05-26-1702-cdt-overall-strategy-priority-map.md
docs/strategy/2026-05-26-1707-cdt-console-read-only-host-inventory-workflow-packet.md
docs/strategy/2026-05-26-1732-cdt-console-read-only-host-inventory-acceptance-checklist.md
docs/strategy/2026-05-26-1736-cdt-console-read-only-host-inventory-evidence-bundle-template.md
docs/LATTICRA_CONSOLE_FOUNDATION.md
docs/status/LATTICRA_CONSOLE_FOUNDATION_STATUS.md
```

If any source is missing, mark the review blocked or insufficient_evidence.

Claims that must remain false

The review must confirm the workflow does not claim:

```
live_host_inventory_claim=0
host_probe_claim=0
host_process_launch_claim=0
host_file_read_claim=0
host_file_write_claim=0
host_mutation_claim=0
network_scan_claim=0
kernel_change_claim=0
system_mutation_claim=0
host_adapter_claim=0
host_adapter_enabled_claim=0
runtime_enforcement_claim=0
boot_claim=0
receipt_materialization_claim=0
signed_receipt_claim=0
signing_authority_claim=0
cryptographic_authority_claim=0
product_readiness_claim=0
production_support_claim=0
security_hardening_claim=0
security_boundary_claim=0
malware_prevention_claim=0
ransomware_prevention_claim=0
estimate_change_claim=0
public_entrypoint_change_claim=0
```

Any true value in this section blocks the review unless a separate contract, implementation plan, guard, evidence record, public-entrypoint review, estimate-impact review, and non-claim update exist.

Console host-inventory wording check

Allowed wording:

```
Console read-only host-inventory contract
contract-only evaluator workflow
metadata-only host-inventory posture
future inventory evidence
inventory contract
inventory schema planned
inventory artifact absent
inventory_performed=0
```

Blocked wording:

```
host inventory captured
host scanned
host probed
host inspected
machine audited
files inventoried
system enumerated
live inventory complete
```

If blocked wording appears, the review outcome must be claim_safe_with_required_edits or claim_unsafe_blocked.

Authority wording check

Allowed wording:

```
authority denied
no-effect authority floor
metadata-only contract
read-only planning
host_adapter_present=0
host_probe_allowed=0
host_file_read_allowed=0
host_file_write_allowed=0
host_mutation_allowed=0
network_allowed=0
runtime_enforcement_allowed=0
boot_allowed=0
```

Blocked wording:

```
host access granted
host adapter enabled
runtime enforcement active
system access available
file access available
network discovery available
process launch available
boot integration available
```

Any authority-bearing wording must be rejected unless it belongs to a separate contracted and evidenced lane.

Receipt and signing wording check

Allowed wording:

```
receipt planning
metadata-only receipt request contract
receipt payload schema planned
payload materialization unavailable
signature request unavailable
signing authority absent
receipt_written=0
receipt_signed=0
```

Blocked wording:

```
receipt materialized
receipt signed
trusted receipt
signed host inventory
cryptographic proof
verification authority
publication authority
```

Receipt or signing claims require separate evidence and review before they can be considered.

Product-readiness wording check

Allowed wording:

```
technical evaluator workflow
planning evidence
future evidence capture
non-claim review
no product-readiness promotion recommended
public evaluator clarity
```

Blocked wording:

```
ready for users
production ready
daily driver
operator-ready product
supported release
secure product
approved workflow
```

If blocked wording appears, the review outcome must be claim_safe_with_required_edits or claim_unsafe_blocked.

Security wording check

Allowed wording:

```
security-conscious planning
defensive planning
non-claim review
no security boundary claimed
no security-hardening promotion recommended
```

Blocked wording:

```
prevents malware
prevents ransomware
secure sandbox
hardened runtime
security boundary
verified protection
host protection
production cryptographic trust
```

Any security-protection wording requires separate enforcement evidence before it can be considered.

Evidence wording check

Allowed wording:

```
template
planning packet
checklist
future evidence
missing evidence
partial evidence
evidence ready for review
```

Blocked wording:

```
evidence complete
workflow accepted
host inventory accepted
product readiness improved
estimate increase justified
```

```
public posture changed
```

Blocked evidence wording may become allowed only after the evidence bundle is complete and separately reviewed.

Required reviewer answers

```
Does the workflow preserve no live host inventory? yes|no
Does the workflow preserve no host probing? yes|no
Does the workflow preserve no host file reading? yes|no
Does the workflow preserve no host file writing? yes|no
Does the workflow preserve no host mutation? yes|no
Does the workflow preserve no network scanning? yes|no
Does the workflow preserve no process launch? yes|no
Does the workflow preserve no host-adapter enablement? yes|no
Does the workflow preserve no runtime enforcement? yes|no
Does the workflow preserve no receipt materialization? yes|no
Does the workflow preserve no signed receipt? yes|no
Does the workflow preserve no signing or cryptographic authority? yes|no
Does the workflow preserve no product-readiness promotion? yes|no
Does the workflow preserve no security claim? yes|no
Does the workflow preserve no estimate change? yes|no
Does the workflow preserve no public-entrypoint change? yes|no
```

All answers must be yes for claim_safe_for_current_scope.

Required edit log

If edits are required, record:

```
source file:
claim text:
claim risk:
required replacement:
reviewer note:
```

Review gate output

```
non_claim_review_present=0|1
claim_expansion_detected=0|1
required_edits_present=0|1
blocking_claims_present=0|1
public_entrypoint_review_required=0|1
estimate_impact_review_required=0|1
review_outcome:
```

This template output:

```
non_claim_review_present=0
claim_expansion_detected=0
required_edits_present=0
blocking_claims_present=0
public_entrypoint_review_required=0
estimate_impact_review_required=0
review_outcome=not_performed
```

Recommended next planning move

Recommended next planning move:

```
begin the Tier 2 Nucleus effect-contract and runtime-denial gate planning package
```

Reason:

```
the non-claim, public-entrypoint, and estimate-impact review shapes are now
defined and indexed, and the completion checkpoint closes this package; the
next useful planning lane is the Tier 2 Nucleus effect-boundary package
```

Non-claims

This template does not perform a non-claim review, validate workflow evidence, run Console, run latticra-lc, run latticra_console_report, inspect a host, probe a host, read host files, write host files, scan a network, launch a host process, mutate a host, create an inventory artifact, create a receipt, request a signature, sign a receipt, enable a host adapter, enforce runtime policy, boot hardware, validate product readiness, update estimates, update public entry points, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records a non-claim review form only.

docs/strategy/2026-05-26-1919-cdt-console-read-only-host-inventory-public-entrypoint-review-template.md

Source title: Latticra Console Read-Only Host Inventory Public-Entrypoint Review Template

Lines: 338 | Words: 1058 | SHA-256: 038c086f308681799b65cd184a74a0f7fba81439b54313d01940528a49121294

Latticra Console Read-Only Host Inventory Public-Entrypoint Review Template

Status: draft public-entrypoint review template Created: 2026-05-26 19:19 CDT Decision: review template only Promotion decision: no Console, host-inventory, host-adapter, product-readiness, runtime, security, or OS-base promotion recommended Scope: public-entrypoint review for future Console read-only host-inventory evaluator workflow evidence.

Purpose

This template defines when future Console read-only host-inventory evidence may justify updates to public reader-facing entry points.

It does not perform the review, update public entry points, or change project posture.

Source review

This template follows:

```
docs/strategy/2026-05-26-1757-cdt-console-read-only-host-inventory-non-claim-review-template.md
```

The source evidence bundle template remains:

```
docs/strategy/2026-05-26-1736-cdt-console-read-only-host-inventory-evidence-bundle-template.md
```

The target workflow remains:

```
contract_only_console_host_inventory_evaluator_workflow
```

The rejected workflow remains:

```
live_host_inventory_capture
```

Review header

```
review name:
created:
reviewer:
review status: not_started|blocked|partial|complete|rejected
workflow evidence bundle:
acceptance checklist:
non-claim review:
estimate-impact review:
repository commit:
```

Required review outcome

Use one outcome:

```
no_public_entrypoint_change
public_entrypoint_change_allowed_with_edits
public_entrypoint_change_blocked
insufficient_evidence
```

This template result:

```
review_performed=0
public_entrypoint_change_recommended=0
README_update_required=0
STATUS_update_required=0
CURRENT_STATUS_update_required=0
project_notes_update_required=0
strategy_index_update_required=0
announcement_review_required=0
reason=this file defines the future review shape only
```

Review prerequisites

Public-entrypoint review is blocked unless:

```
workflow_evidence_bundle_present=1
acceptance_checklist_result_present=1
non_claim_review_present=1
claim_expansion_detected=0
blocked_claim_detected=0
```

Estimate-related public-entrypoint changes are additionally blocked unless:

```
estimate_impact_review_present=1
estimate_change_recommended=0|1
```

If any prerequisite is missing, use:

```
review_outcome=insufficient_evidence
public_entrypoint_change_recommended=0
```

Entry points under review

Review only these public surfaces for this workflow:

```
README.md
STATUS.md
docs/status/CURRENT_STATUS.md
docs/project_notes/CURRENT_DIRECTION.md
docs/project_notes/UPCOMING_WORK.md
docs/strategy/README.md
```

Do not update foundation docs, installer docs, host-adapter docs, OS-base docs, security docs, announcement logs, package docs, or platform docs from this review unless a separate review explicitly names them.

Allowed public-entrypoint changes

Allowed only after prerequisites pass:

```
add pointer to completed Console host-inventory evidence bundle
add pointer to non-claim review
add pointer to estimate-impact review
clarify that contract-only Console host-inventory workflow evidence exists
clarify that the workflow is for technical evaluators
clarify that no live host inventory was performed
clarify that no host adapter was enabled
clarify that no product-readiness promotion follows from this evidence alone
```

Allowed wording:

```
Console read-only host-inventory evidence bundle
contract-only host-inventory evaluator workflow evidence
metadata-only host-inventory posture
inventory contract evidence
no live host inventory performed
no host-adapter enablement
no product-readiness promotion from this evidence alone
```

Blocked public-entrypoint changes

Blocked unless a separate capability promotion has been accepted:

```
claim live host inventory was captured
claim host scan completed
claim host probing occurred
claim host files were read
claim host files were written
claim host mutation occurred
claim network scan occurred
claim host adapter was enabled
claim runtime enforcement
claim boot behavior
claim signed receipt
claim cryptographic proof
claim signing authority
increase public product-readiness estimate
claim production readiness
claim daily-driver readiness
claim operator-ready product
claim security protection
claim malware prevention
claim ransomware prevention
claim sandboxing
claim operating-system replacement
```

If any blocked change is requested, the review outcome must be:

```
public_entrypoint_change_blocked
```

README review questions

```
Does README need a new link? yes|no
Does README wording stay bounded to contract-only Console host-inventory evidence? yes|no
Does README avoid implying a live host scan? yes|no
Does README avoid implying host-adapter enablement? yes|no
Does README avoid product-readiness promotion? yes|no
Does README avoid security, sandboxing, OS-base, or installer claims? yes|no
Does README preserve current estimate wording unless estimate-impact review changes it? yes|no
```

README update is allowed only if every preservation answer is yes.

STATUS.md review questions

```
Does STATUS.md need a new latest-note line? yes|no
Does STATUS.md need estimate table changes? yes|no
Does STATUS.md preserve planning-estimate caveats? yes|no
Does STATUS.md avoid capability posture promotion? yes|no
Does STATUS.md identify the evidence as contract-only? yes|no
Does STATUS.md preserve live_host_inventory_claim=0? yes|no
Does STATUS.md preserve host_adapter_claim=0? yes|no
```

Estimate table changes require a separate estimate-impact review with estimate_change_recommended=1.

CURRENT_STATUS review questions

```
Does CURRENT_STATUS need a detailed evidence note? yes|no
Does CURRENT_STATUS preserve inventory_performed=0 unless actual evidence changes it? yes|no
Does CURRENT_STATUS preserve host_probe_allowed=0? yes|no
Does CURRENT_STATUS preserve host_file_read_allowed=0? yes|no
Does CURRENT_STATUS preserve host_file_write_allowed=0? yes|no
Does CURRENT_STATUS preserve host_mutation_allowed=0? yes|no
Does CURRENT_STATUS preserve network_allowed=0? yes|no
Does CURRENT_STATUS preserve runtime_enforcement_allowed=0? yes|no
Does CURRENT_STATUS preserve boot_allowed=0? yes|no
Does CURRENT_STATUS preserve no security-hardening promotion? yes|no
Does CURRENT_STATUS preserve no product-readiness promotion unless separately reviewed? yes|no
```

Project-notes review questions

```
Does CURRENT_DIRECTION need narrative alignment? yes|no
Does UPCOMING_WORK need queue alignment? yes|no
Does the current next-step rule remain unchanged? yes|no
Does the workflow evidence change near-term strategy? yes|no
Does the workflow evidence require a new evidence-capture lane? yes|no
```

If the current next-step rule changes, a strategy posture review is required.

Strategy index review questions

```
Does docs/strategy/README.md need only a link update? yes|no
Does the new entry remain dated and reviewable? yes|no
Does the index avoid implying capability promotion? yes|no
Does the index preserve this record as a template rather than completed review? yes|no
```

Strategy index link updates are allowed when a dated review record exists, even if no capability posture changes.

Announcement review trigger

Announcement review is required only if:

```
public capability posture changed=1
product_readiness_estimate_changed=1
security_hardening_posture_changed=1
runtime_authority_changed=1
host_inventory_evidence_accepted_for_public_posture=1
host_adapter_posture_changed=1
```

This template result:

```
announcement_review_required=0
reason=no evidence or posture change in this template
```

Required edit log

If public-entrypoint edits are allowed, record:

```
entrypoint:
edit type:
source evidence:
non-claim review:
estimate-impact review:
old wording:
new wording:
claim risk:
reviewer note:
```

Review gate output

```
public_entrypoint_review_present=0|1
public_entrypoint_change_recommended=0|1
README_update_required=0|1
STATUS_update_required=0|1
CURRENT_STATUS_update_required=0|1
project_notes_update_required=0|1
strategy_index_update_required=0|1
announcement_review_required=0|1
blocked_claim_detected=0|1
estimate_impact_review_required=0|1
review_outcome:
```

This template output:

```
public_entrypoint_review_present=0
public_entrypoint_change_recommended=0
README_update_required=0
STATUS_update_required=0
CURRENT_STATUS_update_required=0
project_notes_update_required=0
strategy_index_update_required=0
announcement_review_required=0
blocked_claim_detected=0
estimate_impact_review_required=0
review_outcome=not_performed
```

Recommended next planning move

Recommended next planning move:

```
begin the Tier 2 Nucleus effect-contract and runtime-denial gate planning package
```

Reason:

```
the public-entrypoint and estimate-impact review shapes are now defined and
indexed, and the completion checkpoint closes this package; the next useful
planning lane is the Tier 2 Nucleus effect-boundary package
```

Non-claims

This template does not perform a public-entrypoint review, update README, update status files, update project notes, create an announcement, validate workflow evidence, run Console, run latticra-lc, run latticra_console_report, inspect a host, probe a host, read host files, write host files, scan a network, launch a host process, mutate a host, create an inventory artifact, create a receipt, request a signature, sign a receipt, enable a host adapter, enforce runtime policy, boot hardware, validate product readiness, update estimates, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records a public-entrypoint review form only.

docs/strategy/2026-05-26-1956-cdt-console-read-only-host-inventory-estimate-impact-review-template.md

Source title: Latticra Console Read-Only Host Inventory Estimate-Impact Review Template

Lines: 369 | Words: 990 | SHA-256: 7e22f0e0255653a3811310e251d251f44ec4f40ca0c4167027fd35a026688ef3

Latticra Console Read-Only Host Inventory Estimate-Impact Review Template

Status: draft estimate-impact review template Created: 2026-05-26 19:56 CDT Decision: review template only Promotion decision: no Console, host-inventory, host-adapter, product-readiness, runtime, security, or OS-base promotion recommended Scope: estimate-impact review for future Console read-only host-inventory evaluator workflow evidence.

Purpose

This template defines how future Console read-only host-inventory evidence should be reviewed before any completion estimate changes are considered.

It does not perform the review, change estimates, or change public product-readiness posture.

Source review

This template follows:

```
docs/strategy/2026-05-26-1919-cdt-console-read-only-host-inventory-public-entrypoint-review-temp
late.md
```

The source non-claim review template remains:

```
docs/strategy/2026-05-26-1757-cdt-console-read-only-host-inventory-non-claim-review-template.md
```

The target workflow remains:

```
contract_only_console_host_inventory_evaluator_workflow
```

The rejected workflow remains:

```
live_host_inventory_capture
```

Review header

```
review name:
created:
reviewer:
review status: not_started|blocked|partial|complete|rejected
workflow evidence bundle:
acceptance checklist result:
non-claim review:
public-entrypoint review:
repository commit:
```

Required review outcome

Use one outcome:

```
no_estimate_change
estimate_change_allowed_with_public_entrypoint_review
estimate_change_blocked
insufficient_evidence
```

This template result:

```
review_performed=0
estimate_change_recommended=0
overall_latticra_system_estimate_change_recommended=0
panel_local_control_surface_estimate_change_recommended=0
public_product_readiness_estimate_change_recommended=0
public_documentation_estimate_change_recommended=0
strategy_status_funding_estimate_change_recommended=0
runtime_os_direction_estimate_change_recommended=0
security_hardening_estimate_change_recommended=0
reason=this file defines the future review shape only
```

Review prerequisites

Estimate-impact review is blocked unless:

```
workflow_evidence_bundle_present=1
acceptance_checklist_result_present=1
acceptance_checklist_result=evidence_ready_for_review
non_claim_review_present=1
claim_expansion_detected=0
public_entrypoint_review_present=1
blocked_public_entrypoint_claim_detected=0
```

If any prerequisite is missing, use:

```
review_outcome=insufficient_evidence
estimate_change_recommended=0
```

If any estimate movement is proposed, additionally require:

```
current_public_estimate_table_read=1
source_files_aligned=1
evidence_bundle_complete=1
no_claim_expansion=1
public_entrypoint_change_allowed=0|1
```

Baseline estimate record

Record current estimates at review time:

```
baseline_record_date:
baseline_source_files:
overall_latticra_system:
latticra_panel_local_control_surface:
public_product_readiness:
public_documentation_posture:
strategy_status_funding_framework:
latticra_seal_local_evidence_layer:
runtime_operating_system_universe_direction:
security_hardening_implementation:
```

Do not rely on estimates copied into older strategy templates. The reviewer must read the current public estimate table at review time.

Capability-posture questions

Answer before any estimate movement:

```
Does the evidence add a completed user-facing workflow? yes|no
Does the evidence show a target evaluator completed the workflow? yes|no
Does the evidence remain contract-only? yes|no
Does the evidence preserve live_host_inventory_performed=0? yes|no
Does the evidence preserve host_probe_allowed=0? yes|no
Does the evidence preserve host_file_read_allowed=0? yes|no
Does the evidence preserve host_file_write_allowed=0? yes|no
Does the evidence preserve host_mutation_allowed=0? yes|no
Does the evidence preserve network_allowed=0? yes|no
Does the evidence preserve host_adapter_enabled=0? yes|no
Does the evidence preserve runtime_enforcement_allowed=0? yes|no
Does the evidence preserve boot_allowed=0? yes|no
Does the evidence preserve receipt_signed=0? yes|no
Does the evidence preserve no product-readiness overclaim? yes|no
Does the evidence preserve no security-hardening overclaim? yes|no
```

All answers must support the proposed estimate decision.

Estimate lanes under review

Potentially reviewable lanes for this workflow:

```
Latticra Panel / local control surface
Public product readiness
Public documentation posture
Strategy/status/funding framework
```

Default decision for this contract-only workflow:

```
estimate_change_recommended=0
```

Reason:

```
contract-only host-inventory evidence may improve review clarity, but it does
not by itself prove live host inventory, host-adapter behavior, runtime
authority, security hardening, product readiness, or production support
```

Blocked lanes for this workflow unless a separate evidence packet exists:

```
Runtime / operating-system-universe direction
Security-hardening implementation
Nucleus real task execution
Latticra Seal / local evidence layer
Nadia offline AI foundation
Lat / Latticra Programming Language
LIR / Intermediate Representation
C/C++ foundation direction
Constrained C++ authority layer
```

Product-readiness estimate rule

Product-readiness estimate movement is blocked unless:

```
target_evaluator_completed_workflow=1
evidence_bundle_complete=1
non_claim_review_claim_safe=1
public_entrypoint_review_complete=1
support_boundary_present=1
known_limitations_present=1
live_host_inventory_claim=0
host_adapter_claim=0
runtime_authority_claim=0
security_hardening_claim=0
```

Even when all requirements pass, product-readiness movement must remain conservative and must not imply production readiness, security protection, host-adapter readiness, or OS-base behavior.

Panel/local-control estimate rule

Panel or local-control-surface estimate movement may be considered only if:

```
Console_host_inventory_contract_visible=1
Console_command_surface_visible=1
```

```
authority_floor_visible=1
receipt_boundary_visible=1
host_adapter_gate_visible=1
failure_state_coverage_visible=1
public_entrypoint_review_complete=1
```

Any movement must be limited to reviewability of the local control surface. It must not imply live host inventory, host access, file access, network access, runtime enforcement, or host-adapter availability.

Public documentation estimate rule

Public documentation posture movement may be considered only if:

```
workflow_docs_complete=1
non_claims_visible=1
public_entrypoints_aligned=1
support_boundary_visible=1
known_limitations_visible=1
blocked_wording_removed=1
```

Documentation estimate movement must not be used as a substitute for product-readiness evidence.

Strategy/status/funding estimate rule

Strategy/status/funding framework movement may be considered only if:

```
strategy_chain_complete=1
status_surfaces_aligned=1
public_entrypoint_review_complete=1
estimate_impact_review_complete=1
no_announcement_mismatch_exists=1
```

This lane must not move simply because a template was added.

Blocked estimate changes

Block estimate changes when:

```
evidence_bundle_incomplete=1
non_claim_review_missing=1
claim_expansion_detected=1
public_entrypoint_review_missing=1
workflow_not_completed_by_target_evaluator=1
live_host_inventory_claim_introduced=1
host_probe_claim_introduced=1
host_file_read_claim_introduced=1
host_file_write_claim_introduced=1
host_mutation_claim_introduced=1
network_scan_claim_introduced=1
host_adapter_claim_introduced=1
runtime_authority_claim_introduced=1
security_hardening_claim_introduced=1
product_readiness_wording_overclaims=1
```

Estimate-change proposal fields

If any estimate movement is proposed, record:

```
lane:
baseline estimate:
proposed estimate:
delta:
evidence basis:
non-claim review:
public-entrypoint review:
residual risk:
reviewer note:
```

Every proposed change must have a separate lane entry.

Required reviewer answers

```
Does this evidence change capability posture? yes|no
Does this evidence justify any estimate change? yes|no
Does this evidence require public-entrypoint updates? yes|no
Does this evidence require announcement review? yes|no
Does this evidence preserve all non-claims? yes|no
Does this evidence preserve current host-inventory posture? yes|no
Does this evidence preserve current host-adapter posture? yes|no
Does this evidence preserve current runtime authority posture? yes|no
Does this evidence preserve current security-hardening posture? yes|no
```

If any answer is ambiguous, use insufficient_evidence.

Review gate output

```
estimate_impact_review_present=0|1
estimate_change_recommended=0|1
overall_latticra_system_estimate_change_recommended=0|1
panel_local_control_surface_estimate_change_recommended=0|1
public_product_readiness_estimate_change_recommended=0|1
public_documentation_estimate_change_recommended=0|1
strategy_status_funding_estimate_change_recommended=0|1
runtime_os_direction_estimate_change_recommended=0|1
security_hardening_estimate_change_recommended=0|1
announcement_review_required=0|1
public_entrypoint_update_required=0|1
review_outcome:
```

This template output:

```
estimate_impact_review_present=0
estimate_change_recommended=0
overall_latticra_system_estimate_change_recommended=0
panel_local_control_surface_estimate_change_recommended=0
public_product_readiness_estimate_change_recommended=0
public_documentation_estimate_change_recommended=0
strategy_status_funding_estimate_change_recommended=0
runtime_os_direction_estimate_change_recommended=0
security_hardening_estimate_change_recommended=0
announcement_review_required=0
public_entrypoint_update_required=0
review_outcome=not_performed
```

Recommended next planning move

Recommended next planning move:

```
begin the Tier 2 Nucleus effect-contract and runtime-denial gate planning package
```

Reason:

```
the workflow, checklist, bundle, non-claim review, public-entrypoint review,
estimate-impact review, and review package index now exist; the next useful
planning lane is the Tier 2 Nucleus effect-boundary package after the
completion checkpoint closes this package
```

Non-claims

This template does not perform an estimate-impact review, change estimates, update public entry points, validate workflow evidence, run Console, run latticra-lc, run latticra_console_report, inspect a host, probe a host, read host files, write host files, scan a network, launch a host process, mutate a host, create an inventory artifact, create a receipt, request a signature, sign a receipt, enable a host adapter, enforce runtime policy, boot hardware, validate product readiness, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records an estimate-impact review form only.

docs/strategy/2026-05-26-2019-cdt-console-read-only-host-inventory-planning-completion-checkpoint.md

Source title: Latticra Console Read-Only Host Inventory Planning Completion Checkpoint

Lines: 168 | Words: 537 | SHA-256: 8729afe5fb06e1db973f3b857ae28acd431f20d803fbd33c98497e78ced5099c

Latticra Console Read-Only Host Inventory Planning Completion Checkpoint

Status: planning completion checkpoint Created: 2026-05-26 20:19 CDT Decision: stop at planning package completion Promotion decision: no Console, host-inventory, host-adapter, product-readiness, runtime, security, or OS-base promotion recommended Scope: completion checkpoint for the Console read-only host-inventory strategy package.

Purpose

This checkpoint closes the current planning pass for Console read-only host inventory.

It records that the planning package is organized enough for future evidence work, but that no evidence capture, command execution, host inspection, review performance, public-entrypoint update, estimate change, or product-readiness promotion should begin without a separate explicit request.

Source package

This checkpoint follows:

```
docs/strategy/2026-05-26-1959-cdt-console-read-only-host-inventory-review-package-index.md
```

Latest estimate-impact review template available at this checkpoint:

```
docs/strategy/2026-05-26-1956-cdt-console-read-only-host-inventory-estimate-impact-review-templa
te.md
```

Decision

Current decision:

```
stop_at_planning_package_completion=1
begin_evidence_capture=0
run_commands=0
run_console=0
run_latticra_lc=0
run_latticra_console_report=0
run_host_inventory=0
inspect_host=0
probe_host=0
read_host_files=0
write_host_files=0
scan_network=0
enable_host_adapter=0
create_receipt=0
request_signature=0
perform_non_claim_review=0
perform_public_entrypoint_review=0
perform_estimate_impact_review=0
change_public_posture=0
change_estimates=0
```

Completed planning records

The current package has records for:

```
overall strategy priority selection
Console host-inventory workflow selection
acceptance criteria
evidence bundle shape
non-claim review
public-entrypoint review
estimate-impact review
```

```
package index
```

Current package status

```
planning_package_complete_for_current_scope=1
workflow_selected=1
acceptance_criteria_defined=1
evidence_bundle_shape_defined=1
review_gates_defined=1
package_index_defined=1
workflow_evidence_captured=0
live_host_inventory_performed=0
host_probe_performed=0
host_file_read_performed=0
host_file_write_performed=0
host_mutation_performed=0
network_scan_performed=0
host_adapter_enabled=0
receipt_materialized=0
receipt_signed=0
review_performed=0
estimate_change_recommended=0
public_entrypoint_change_recommended=0
product_readiness_promotion_recommended=0
```

Boundary for future evidence capture

Evidence capture must be a separate explicit request because it may require:

```
running local commands
running Console command surfaces
collecting transcripts
attaching command output
reviewing contract-only evidence
performing non-claim review
performing public-entrypoint review
performing estimate-impact review
```

Those activities are outside this planning-only checkpoint.

Allowed next strategic moves

Allowed planning-only next moves:

```
choose a different promotion gate
create a new planning package for another lane
review overall strategy priorities
refresh strategy index organization
build a roadmap lane map
build a public messaging boundary record
begin the Tier 2 Nucleus effect-contract and runtime-denial gate planning package
```

Blocked without separate request:

```
run Console
run latticra-lc
run latticra_console_report
run host inventory
inspect a host
probe a host
read host files
write host files
scan a network
enable a host adapter
create or sign a receipt
capture evidence transcripts
update README or status as evidence-backed public posture
change completion estimates
announce product-readiness movement
```

Recommended next planning lane

Recommended next planning lane:

```
Nucleus effect-contract and runtime-denial gate planning package
```

Reason:

```
the Console read-only host-inventory path is now organized; the overall priority
```

```
map names runtime and Nucleus effect-boundary planning as the next planning
priority after public evaluator workflow clarity, while still preserving
contract-level, no-effect boundaries
```

Non-claims

This checkpoint does not capture evidence, run commands, run Console, run latticra-lc, run latticra_console_report, inspect a host, probe a host, read host files, write host files, scan a network, launch a host process, mutate a host, create an inventory artifact, create a receipt, request a signature, sign a receipt, enable a host adapter, enforce runtime policy, boot hardware, validate workflow evidence, perform a review, update public entry points, change estimates, provide product readiness, provide Console readiness, provide host-inventory readiness, provide host-adapter readiness, grant runtime authority, execute effects, enforce capabilities, provide cryptographic authority, provide signing authority, harden security, prevent malware, prevent ransomware, provide sandboxing, provide operating-system behavior, or provide production support.

It records planning package completion only.

Latticra Strategy Index

Status: active strategy index Last updated: 2026-05-26 20:19 CDT Scope: dated strategy records, mission alignment, review cadence, and quality expectations.

Purpose

This folder records Latticra strategy in dated, reviewable documents.

Strategy may change as evidence, implementation quality, threat modeling, funding, target users, and architectural constraints change. Dated records make those changes visible instead of hidden.

Naming rule

Use this filename pattern for strategy records:

```
YYYY-MM-DD-HHMM-zone-topic.md
```

Example:

```
2026-05-15-2249-cdt-national-security-open-system-strategy.md
```

Current active strategy

Current strategy record:

```
2026-05-15-2249-cdt-national-security-open-system-strategy.md
```

Latest strategy estimate review:

```
2026-05-19-1845-cdt-strategy-estimate-review.md
```

Latest strategy posture refresh:

```
2026-05-25-1951-cdt-strategy-posture-refresh.md
```

Latest capability promotion gate map:

```
2026-05-25-2017-cdt-capability-promotion-gate-map.md
```

Latest capability promotion packet template:

```
2026-05-25-2025-cdt-capability-promotion-packet-template.md
```

Latest public product-readiness promotion packet:

2026-05-25-2114-cdt-public-product-readiness-promotion-packet.md

Latest Panel-guided local evaluation workflow packet:

2026-05-25-2137-cdt-panel-guided-local-evaluation-workflow-packet.md

Latest Panel-guided local evaluation acceptance checklist:

2026-05-25-2157-cdt-panel-guided-local-evaluation-acceptance-checklist.md

Latest Panel-guided local evaluation evidence bundle template:

2026-05-25-2226-cdt-panel-guided-local-evaluation-evidence-bundle-template.md

Latest Panel-guided local evaluation evidence capture plan:

2026-05-25-2246-cdt-panel-guided-local-evaluation-evidence-capture-plan.md

Latest Panel-guided local evaluation non-claim review template:

2026-05-26-0019-cdt-panel-guided-local-evaluation-non-claim-review-template.md

Latest Panel-guided local evaluation public-entrypoint review template:

2026-05-26-0034-cdt-panel-guided-local-evaluation-public-entrypoint-review-template.md

Latest Panel-guided local evaluation estimate-impact review template:

2026-05-26-0119-cdt-panel-guided-local-evaluation-estimate-impact-review-template.md

Latest Panel-guided local evaluation guard/test reference template:

2026-05-26-0949-cdt-panel-guided-local-evaluation-guard-test-reference-template.md

Latest Panel-guided local evaluation review package index:

2026-05-26-0410-cdt-panel-guided-local-evaluation-review-package-index.md

Latest Panel-guided local evaluation planning completion checkpoint:

2026-05-26-1356-cdt-panel-guided-local-evaluation-planning-completion-checkpoint.md

Latest overall strategy priority map:

2026-05-26-1702-cdt-overall-strategy-priority-map.md

Latest Console read-only host inventory workflow packet:

2026-05-26-1707-cdt-console-read-only-host-inventory-workflow-packet.md

Latest Console read-only host inventory acceptance checklist:

2026-05-26-1732-cdt-console-read-only-host-inventory-acceptance-checklist.md

Latest Console read-only host inventory evidence bundle template:

2026-05-26-1736-cdt-console-read-only-host-inventory-evidence-bundle-template.md

Latest Console read-only host inventory non-claim review template:

2026-05-26-1757-cdt-console-read-only-host-inventory-non-claim-review-template.md

Latest Console read-only host inventory public-entrypoint review template:

2026-05-26-1919-cdt-console-read-only-host-inventory-public-entrypoint-review-template.md

Latest Console read-only host inventory estimate-impact review template:

2026-05-26-1956-cdt-console-read-only-host-inventory-estimate-impact-review-template.md

Latest Console read-only host inventory review package index:

2026-05-26-1959-cdt-console-read-only-host-inventory-review-package-index.md

Latest Console read-only host inventory planning completion checkpoint:

2026-05-26-2019-cdt-console-read-only-host-inventory-planning-completion-checkpoint.md

Current operating rule:

Continue small guarded report/status alignment only when drift appears.

Strategic planning rules

1. State mission clearly.
2. Separate current capability from long-term ambition.
3. Keep security claims evidence-bound.
4. Treat anti-malware and anti-ransomware goals as design targets until validated.
5. Prefer auditable open systems over hidden behavior.
6. Keep public docs professional and self-contained.
7. Update estimates when implementation evidence changes.
8. Add tests before or beside implementation when possible.
9. Use no-effect previews before mutation.
10. Keep target users and deployment assumptions explicit.

Review cadence

Update strategy when any of these change:

- project mission;
- supported target users;
- threat model;
- implementation milestone;
- completion estimate;
- funding model;
- public positioning;
- security non-claims;
- product quality bar;
- roadmap direction.

At minimum, review this folder at major milestone boundaries.

Quality bar

Latticra strategy should be:

```
clear
professional
defensive
evidence-bound
versioned
dated
reviewable
actionable
non-hype
```

Non-claims

This folder does not implement security controls, operating-system behavior, malware prevention, ransomware prevention, sandboxing, update safety, recovery safety, or production readiness.

It records strategy and planning only.

docs/status/AUTHORITY_STATUS_ANNOUNCEMENT_REVIEW.md

Source title: Authority Status Announcement Review

Lines: 33 | Words: 120 | SHA-256: 8bb0f874869b31b60e4e8268ea27c688f3ef0dcab971052121261d055d48f2ec

Authority Status Announcement Review

Status: no-new-announcement review

This record reviews whether the constrained C++ authority review sequence needs a separate public announcement after the authority implementation review, authority status/docs alignment, authority foundation index alignment, status announcement review, public entry-point consistency scan, and project-notes follow-up alignment.

Reviewed files:

```
STATUS.md
docs/status/ANNOUNCEMENTS.md
docs/status/CURRENT_STATUS.md
docs/status/CPP_AUTHORITY_IMPLEMENTATION_REVIEW_STATUS.md
docs/CPP_AUTHORITY_IMPLEMENTATION_REVIEW.md
docs/FOUNDATION_INDEX.md
README.md
```

Finding:

```
No new authority behavior or public messaging change exists beyond the already-recorded
no-effect authority review and documentation alignment sequence.
```

Decision:

```
Do not add a new public announcement for this slice.
Keep the authority messaging evidence-bound, no-effect, metadata-only, fixed-capacity, and
denied-by-default.
Advance the queue to the next implementation/documentation refinement lane.
```

Boundary: status review only. No implementation behavior is changed.

docs/status/BACKUP_RECOVERY_RESILIENCE_BASELINE_STATUS.md

Source title: Latticra Backup, Recovery, and Cyber Resilience Baseline Status

Lines: 64 | Words: 146 | SHA-256: 0a2c9455f30db4abfb523947a95bcbb3e329d90f9e10cf528cc3fea539a50ae8

Latticra Backup, Recovery, and Cyber Resilience Baseline Status

Status: status record for backup, recovery, and cyber resilience baseline Date: 2026-05-26

Scope

This record tracks the backup, recovery, and cyber resilience baseline for backup scope, offline backup posture, restore testing, recovery prioritization, RTO/RPO planning, golden-image and infrastructure-as-code recovery evidence, recovery isolation, rollback, resilience engineering, recovery communications, post-incident lessons learned, and recovery non-claims.

It does not implement backup creation, backup storage, restore execution, rollback execution, disaster recovery, recovery orchestration, failover, continuity operations, golden-image creation, infrastructure-as-code deployment, ransomware recovery, compliance, or runtime authority.

docs/status/COMPLETION_ESTIMATE_L_UI_RENDERING_REVIEW.md

Source title: Completion Estimate Review After L-UI Rendering Detailed Report Refinement

Lines: 45 | Words: 197 | SHA-256: 5a9daaf5b43fc7b692e1f35211e101b2b073521ac97c9e3b427ad82da4f82c20

Completion Estimate Review After L-UI Rendering Detailed Report Refinement

Status: planning-estimate review

This record reviews completion estimates after the no-effect L-UI rendering detailed report refinement and README/status alignment.

Review basis:

```
L-UI rendering detailed report refinement
L-UI rendering README/status alignment
focused L-UI detailed report refinement guard
main C workflow coverage for the L-UI detailed report guard
```

Estimate adjustments:

```
Overall Latticra system: 35% -&gt; 36%
L-UI parser / AST / string foundation: 86% -&gt; 87%
Foundation documents and contracts: 89% -&gt; 90%
Public documentation posture: 83% -&gt; 84%
Strategy/status/funding framework: 57% -&gt; 58%
```

Unchanged areas:

```
Lat / Latticra Programming Language: 25%
LIR / Intermediate Representation: 22%
C/C++ foundation direction: 14%
Constrained C++ authority layer: 4%
Runtime / operating-system-universe direction: 17%
Nucleus real task execution: 11%
Security-hardening implementation: 5%
Public product readiness: 5%
```

Reasoning:

```
The L-UI detailed report refinement improved an existing no-effect renderer reporting surface
and added focused validation. It improved L-UI/report maturity and public documentation posture,
 but it did not add runtime behavior, command execution, authority expansion, security
hardening, or product readiness.
```

Boundary: planning estimates only. These are not release promises, production-readiness claims, security guarantees, or operating-system completeness claims.

docs/status/COMPLETION_ESTIMATE_REVIEW_AFTER_RUNTIME_BOUNDARY_ABUSE_CASE_FIXTURES.md

Source title: Completion Estimate Review After Runtime Boundary Abuse-Case Fixtures

Lines: 94 | Words: 319 | SHA-256: 39e9a46cc0ea638214bcadee7083b19f5313f2f166a9c255880cc9077de5df5d

Completion Estimate Review After Runtime Boundary Abuse-Case Fixtures

Status: planning-estimate review Date: 2026-05-25 CDT Scope: completion-estimate review after the runtime-boundary abuse-case fixture expansion. This record does not implement runtime execution, effect execution, capability enforcement, cryptographic verification, signing, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, shell execution, production protection, sandboxing, malware prevention, ransomware prevention, certification, compliance, public-readiness promotion, or runtime authority.

Review Basis

This review follows:

```
Runtime boundary abuse-case fixture expansion after policy expansion
runtime_boundary_abuse_case_fixture_expansion_present=1
runtime_boundary_abuse_case_fixture_guard_present=1
runtime_boundary_abuse_case_c_fixtures_present=1
runtime_boundary_abuse_case_fixture_count=8
```

The fixture expansion improves evidence coverage for denied and future-gated runtime-boundary abuse cases.

It does not change runtime behavior or public readiness.

Capability Posture Check

```
completion_estimate_after_runtime_boundary_abuse_case_fixtures_present=1
implementation_behavior_changed=0
runtime_execution_added=0
effect_execution_added=0
capability_enforcement_added=0
cryptographic_verification_added=0
signing_added=0
host_behavior_changed=0
network_behavior_changed=0
mcp_behavior_changed=0
agent_execution_added=0
model_execution_added=0
tool_execution_added=0
shell_execution_added=0
runtime_authority_granted=0
security_hardening_changed=0
public_readiness_changed=0
production_readiness_claimed=0
estimate_adjustment_required=0
completion_estimate_review_required=0
completion_estimate_changed=0
```

Estimate Decision

Current estimates remain unchanged:

```
Overall Latticra system: 39%
Latticra Seal / local evidence layer: 34%
Latticra Panel / local control surface: 28%
Nadia offline AI foundation: 59%
L-UI parser / AST / string foundation: 87%
Foundation documents and contracts: 92%
Public documentation posture: 88%
Strategy/status/funding framework: 60%
Lat / Latticra Programming Language: 25%
LIR / Intermediate Representation: 22%
C/C++ foundation direction: 18%
Constrained C++ authority layer: 4%
Nucleus real task execution: 11%
Runtime / operating-system-universe direction: 19%
Security-hardening implementation: 7%
Public product readiness: 8%
```

No estimate is raised because the completed fixture slice adds coverage and reviewability, not a new capability surface.

Validation

This review is guarded by:

```
sh scripts/test-completion-estimate-review-after-runtime-boundary-abuse-case-fixtures.sh
```

Expected output:

```
completion_estimate_review_after_runtime_boundary_abuse_case_fixtures: ok
```

Boundary

These percentages are planning estimates only.

They are not release promises, production-readiness metrics, security guarantees, Fedora approval claims, runtime-enforcement claims, operating-system completeness claims, or authority grants.

The next valid work is small guarded report/status alignment only when drift appears, unless a separate future slice changes capability posture with a contract, implementation plan, tests, and explicit non-claim review.

docs/status/COMPLETION_ESTIMATE_REVIEW_README_STATUS_ALIGNMENT.md

Source title: Completion Estimate Review README Status Alignment

Lines: 81 | Words: 242 | SHA-256: 362029a84a54ad1a818c5552f5f29fde5943d7bd34a639e295f050cae8cad490

Completion Estimate Review README Status Alignment

Status: README/status alignment Date: 2026-05-25 CDT Scope: README, status, foundation-index, and project-notes discoverability after the completion-estimate review following runtime-boundary abuse-case fixtures. This record does not implement runtime execution, effect execution, capability enforcement, cryptographic verification, signing, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, shell execution, public-readiness promotion, production protection, security hardening, or runtime authority.

Review Basis

The completion-estimate hold review already records:

```
completion_estimate_after_runtime_boundary_abuse_case_fixtures_present=1
runtime_boundary_abuse_case_fixture_expansion_present=1
runtime_boundary_abuse_case_fixture_count=8
implementation_behavior_changed=0
runtime_execution_added=0
effect_execution_added=0
capability_enforcement_added=0
security_hardening_changed=0
public_readiness_changed=0
runtime_authority_granted=0
estimate_adjustment_required=0
```

This alignment makes that review easier to find from public entry points without changing the estimate decision.

Alignment Decision

```
completion_estimate_review_readme_status_alignment_present=1
readme_links_latest_completion_estimate_review=1
status_index_links_alignment_record=1
foundation_index_links_alignment_record=1
project_notes_link_alignment_record=1
implementation_behavior_changed=0
runtime_execution_added=0
effect_execution_added=0
capability_enforcement_added=0
security_hardening_changed=0
public_readiness_changed=0
runtime_authority_granted=0
estimate_adjustment_required=0
completion_estimate_changed=0
```

The README now points readers from the current status table to the latest completion-estimate hold review:

```
docs/status/COMPLETION_ESTIMATE_REVIEW_AFTER_RUNTIME_BOUNDARY_ABUSE_CASE_FIXTURES.md
```

Current estimates remain unchanged:

```
Overall Latticra system: 39%
Latticra Seal / local evidence layer: 34%
Security-hardening implementation: 7%
Public product readiness: 8%
```

Validation

This alignment is guarded by:

```
sh scripts/test-completion-estimate-review-readme-status-alignment.sh
```

Expected output:

```
completion_estimate_review_readme_status_alignment: ok
```

Boundary

This is a public-entry/status alignment only.

It does not change capability posture, implementation behavior, security-hardening posture, public readiness, product readiness, completion estimates, or runtime authority.

The next valid work remains small guarded report/status alignment only when drift appears, unless a separate future slice changes capability posture with a contract, implementation plan, tests, and explicit non-claim review.

Completion Percentage Review

Status: planning-estimate review

This record reviews completion estimates after the recent report, diagnostic, audit, README, foundation-index, project-notes, and status-consistency slices.

Review basis:

```
Lat pipeline diagnostic integration refinement
Lat pipeline diagnostic main test audit
Runtime boundary domain matrix report integration
Runtime boundary domain matrix main test audit
Project notes upcoming work alignment
Current direction project notes alignment
Project notes index alignment
Current status and announcement consistency review
```

Estimate adjustments:

```
Overall Latticra system: 34% -&gt; 35%
Foundation documents and contracts: 88% -&gt; 89%
Public documentation posture: 82% -&gt; 83%
Strategy/status/funding framework: 56% -&gt; 57%
Lat / Latticra Programming Language: 24% -&gt; 25%
Runtime / operating-system-universe direction: 16% -&gt; 17%
```

Unchanged areas:

```
L-UI parser / AST / string foundation: 86%
LIR / Intermediate Representation: 22%
C/C++ foundation direction: 14%
Constrained C++ authority layer: 4%
```

Boundary: planning estimates only. These are not release promises, production-readiness claims, security guarantees, or operating-system completeness claims.

docs/status/CPP_AUTHORITY_EXPANSION_CONTRACT_REVIEW.md

Source title: C++ Authority Expansion Contract Review

Lines: 36 | Words: 113 | SHA-256: 094ccd9bab58af90f1cddb429038733bc590a2df08e45c490c30c22350e51a0f

C++ Authority Expansion Contract Review

Status: no-expansion-contract review

This record reviews whether a new C++ authority expansion contract is needed after the latest no-effect reporting, documentation, and status alignment slices.

Reviewed files:

```
STATUS.md
docs/status/CURRENT_STATUS.md
docs/status/CPP_AUTHORITY_IMPLEMENTATION_REVIEW_STATUS.md
docs/CPP_AUTHORITY_IMPLEMENTATION_REVIEW.md
docs/CONSTRAINED_CPP_AUTHORITY_LAYER_CONTRACT.md
docs/CONSTRAINED_CPP_AUTHORITY_LAYER_IMPLEMENTATION.md
docs/CONSTRAINED_CPP_AUTHORITY_LAYER_IMPLEMENTATION_PLAN.md
include/latticra/cpp/authority.hpp
src/cpp/authority.cpp
tests/cpp_authority_layer_invariants.cpp
```

Finding:

```
No new C++ authority behavior has been proposed.
```

Decision:

```
Do not create a C++ authority expansion contract in this slice.
Keep the constrained C++ authority layer no-effect, metadata-only, fixed-capacity, and
denied-by-default.
Only create a future expansion contract if a specific new authority behavior is proposed with
explicit effect boundaries, failure behavior, tests, and non-claims.
```

Boundary: review/status only. No C++ authority behavior is changed.

docs/status/CPP_AUTHORITY_IMPLEMENTATION_REVIEW_STATUS.md

Source title: C++ Authority Implementation Review Status

Lines: 35 | Words: 63 | SHA-256: 6928bd0c2f233c2698d5d3f50ec2fc773ea769b0f7ac7ab2ad0f54f67c619754

C++ Authority Implementation Review Status

Status: review record

This status record tracks the constrained C++ authority implementation review.

Primary review record:

```
docs/CPP_AUTHORITY_IMPLEMENTATION_REVIEW.md
```

Reviewed surfaces:

```
include/latticra/cpp/authority.hpp
src/cpp/authority.cpp
tests/cpp_authority_layer_invariants.cpp
scripts/test-cpp-authority-layer.sh
docs/CONSTRAINED_CPP_AUTHORITY_LAYER_IMPLEMENTATION.md
```

Review result:

```
The constrained C++ authority implementation remains no-effect, metadata-only, fixed-capacity,
and denied-by-default.
```

Validation:

```
sh scripts/test-cpp-authority-layer.sh
```

Boundary: documentation/status review only. No implementation behavior is changed.

Latticra Cryptographic Assurance and Key Management Baseline Status

Status: status record for cryptographic assurance and key management baseline Date: 2026-05-26

Scope

This record tracks the cryptographic assurance and key-management baseline for cryptographic module boundaries, FIPS/CMVP claim gates, algorithm and parameter inventory, key lifecycle, key storage, key destruction, randomness, self-tests, sensitive-data handling, post-quantum migration planning, Seal metadata, signing authority, and cryptographic non-claims.

It does not implement production cryptography, signing authority, key storage, key generation, entropy collection, random-bit generation, FIPS validation, CMVP submission, CAVP testing, post-quantum migration, compliance, or runtime authority.

docs/status/CURRENT_ESTIMATE_MATHEMATICAL_REBASE_2026_05_26.md

Source title: Current Estimate Mathematical Rebase - 2026-05-26

Lines: 87 | Words: 500 | SHA-256: 46e79ec3a03726b8988e2eeefbcc8fb29cfb423117c812fe8d0649497524bbb2

Current Estimate Mathematical Rebase - 2026-05-26

Status: mathematical planning-estimate rebase Date: 2026-05-26 CDT Scope: present public estimate table after the recent Seal status chain, Ubuntu local deb lane, macOS reset/uninstall contract lane, Nadia Stage-43 prompt-evaluation release-receipt contract chain, Lat/LIR evidence propagation, kernel lifecycle scheduler-credit and scheduler-selection-ready evidence, vulnerability-management release-gate baseline coverage, and current status/public-entry alignment. This record does not implement runtime execution, effect execution, capability enforcement, cryptographic verification, signing, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, shell execution, production readiness, public-readiness promotion, security hardening, or runtime authority.

Purpose

This record replaces the older rough table with a closer mathematical planning estimate.

The estimate remains conservative because much of Latticra is contract/status/evidence work, not production runtime behavior.

Model

The overall estimate is computed as a weighted average of the current lane estimates.

Weights:

```
Latticra Seal / local evidence layer: 10
Latticra Panel / local control surface: 8
Nadia offline AI foundation: 6
L-UI parser / AST / string foundation: 6
Foundation documents and contracts: 10
Public documentation posture: 8
Strategy/status/funding framework: 5
Lat / Latticra Programming Language: 8
LIR / Intermediate Representation: 6
C/C++ foundation direction: 6
Constrained C++ authority layer: 4
Nucleus real task execution: 5
Runtime / operating-system-universe direction: 8
Security-hardening implementation: 5
Public product readiness: 5
weight_total=100
```

Weighted calculation:

```
weighted_sum=4473
weight_total=100
overall_estimate=round(4473 / 100)=45
```

Rebased Estimate Table

```
| Area | Previous live estimate | Rebased estimate |
| --- | ---: | ---: |
| Overall Latticra system | 39% | 45% |
| Latticra Seal / local evidence layer | 34% | 39% |
| Latticra Panel / local control surface | 28% | 31% |
| Nadia offline AI foundation | 70% | 75% |
| L-UI parser / AST / string foundation | 87% | 87% |
| Foundation documents and contracts | 92% | 94% |
| Public documentation posture | 88% | 91% |
| Strategy/status/funding framework | 60% | 63% |
| Lat / Latticra Programming Language | 25% | 27% |
| LIR / Intermediate Representation | 22% | 24% |
| C/C++ foundation direction | 18% | 22% |
| Constrained C++ authority layer | 4% | 5% |
| Nucleus real task execution | 11% | 12% |
| Runtime / operating-system-universe direction | 19% | 26% |
| Security-hardening implementation | 7% | 10% |
| Public product readiness | 8% | 10% |
```

Boundary

These percentages are planning estimates only.

They are not release promises, production-readiness metrics, security guarantees, Fedora approval claims, Ubuntu archive-readiness claims, macOS production-readiness claims, runtime-enforcement claims, operating-system completeness claims, or authority grants.

The rebase raises estimates only where recent guarded evidence increased documented contract/status coverage. It does not claim production enforcement, real runtime execution, effect execution, host mutation, network behavior, signing, verification, model execution, or product readiness beyond the values above.

Validation

This rebase is guarded by:

```
sh scripts/test-current-estimate-table-source-alignment.sh
```

Expected output:

```
current_estimate_table_source_alignment: ok
```

docs/status/CURRENT_ESTIMATE_REFRESH_2026_05_24.md

Source title: Current Estimate Refresh - 2026-05-24

Lines: 67 | Words: 401 | SHA-256: e795044805d1ab29542af0b7366fb3bc6567eebd3321e0893ba6deff87eb71de

Current Estimate Refresh - 2026-05-24

Status: planning-estimate refresh Last updated: 2026-05-24 CDT Scope: current estimates after Latticra Panel, Latticra Seal, handbook/docs, local evidence, C source organization, and Fedora/local-install evidence work.

Review basis

- Latticra Panel local control surface and visible app direction
- Latticra Seal local report-only verification layer
- Manifest/hash baseline and policy-denial evidence
- Fedora local install and disposable VM evidence posture
- Latticra Seal handbook and system-substrate documentation expansion
- C/C++ foundation direction and source-only field-engine organization
- Current public-status alignment requirement

Estimate adjustments

- Overall Latticra system: 36% -> 39%
- Foundation documents and contracts: 90% -> 92%
- Public documentation posture: 84% -> 88%
- Strategy/status/funding framework: 58% -> 60%
- C/C++ foundation direction: 14% -> 18%
- Runtime / operating-system-universe direction: 17% -> 19%
- Security-hardening implementation: 5% -> 7%
- Public product readiness: 5% -> 8%

Newly separated estimate lanes

- Latticra Seal / local evidence layer: 34%
- Latticra Panel / local control surface: 28%

Unchanged areas

- L-UI parser / AST / string foundation: 87%
- Lat / Latticra Programming Language: 25%
- LIR / Intermediate Representation: 22%
- Constrained C++ authority layer: 4%
- Nucleus real task execution: 11%

Current estimate table

Area	Estimated completion
Overall Latticra system	39%
Latticra Seal / local evidence layer	34%
Latticra Panel / local control surface	28%
L-UI parser / AST / string foundation	87%
Foundation documents and contracts	92%
Public documentation posture	88%
Strategy/status/funding framework	60%
Lat / Latticra Programming Language	25%
LIR / Intermediate Representation	22%
C/C++ foundation direction	18%
Constrained C++ authority layer	4%
Nucleus real task execution	11%
Runtime / operating-system-universe direction	19%
Security-hardening implementation	7%
Public product readiness	8%

These percentages are planning estimates only. They are not release promises, production-readiness metrics, security guarantees, Fedora approval claims, runtime-enforcement claims, or operating-system completeness claims.

Boundary

This refresh records planning estimates only.

It does not claim that Latticra is a kernel, bootable operating system, production installer, production security product, certified Fedora distribution, runtime enforcement layer, malware-prevention system, ransomware-prevention system, or daily-driver platform.

docs/status/CURRENT_ESTIMATE_TABLE_SOURCE_ALIGNMENT.md

Source title: Current Estimate Table Source Alignment

Lines: 80 | Words: 343 | SHA-256: 9ce2f8abf9a5343a9fff76a4d360c35c5327abbbd03a9f0d4ff6ba255a4a7d34

Current Estimate Table Source Alignment

Status: current estimate table source alignment Date: 2026-05-26 CDT Scope: README, root status, detailed current status, status index, foundation index, project-notes alignment, and the current mathematical rebase record for the public estimate table source. This record does not implement runtime execution, effect execution, capability enforcement, cryptographic verification, signing, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, shell execution, public-readiness promotion, production protection, security hardening, or runtime authority.

Purpose

The public README now includes an explicit estimate-source row and a current estimate table mirrored from STATUS.md and docs/status/CURRENT_STATUS.md.

This record guards that source relationship so the public entry point does not imply that an older estimate refresh or a later no-change hold review is the only source for the live table. The mathematical rebase record is the estimating record for the current values; this source-alignment record mirrors that table into the public entry points.

Current Source Fields

```

```

Current Public Estimate Table

```
Overall Latticra system: 45%
Latticra Seal / local evidence layer: 39%
Latticra Panel / local control surface: 31%
Nadia offline AI foundation: 75%
L-UI parser / AST / string foundation: 87%
Foundation documents and contracts: 94%
Public documentation posture: 91%
Strategy/status/funding framework: 63%
Lat / Latticra Programming Language: 27%
LIR / Intermediate Representation: 24%
C/C++ foundation direction: 22%
Constrained C++ authority layer: 5%
Nucleus real task execution: 12%
Runtime / operating-system-universe direction: 26%
Security-hardening implementation: 10%
Public product readiness: 10%
```

Boundary

These percentages are planning estimates only.

They are not release promises, production-readiness metrics, security guarantees, Fedora approval claims, runtime-enforcement claims, operating-system completeness claims, or authority grants.

This source alignment mirrors the current mathematical rebase into the reader-facing estimate sources. It does not change implementation behavior, runtime behavior, security hardening, public readiness, product readiness, or authority.

Validation

This alignment is guarded by:

```
sh scripts/test-current-estimate-table-source-alignment.sh
```

Expected output:

```
current_estimate_table_source_alignment: ok
```

l
```

Current Boundary

The Debian lane does not publish a package, upload to mentors.debian.net, submit to Debian, claim Debian archive readiness, claim Debian sponsorship, claim ftp-master acceptance, install a root service, change init/systemd state, change the kernel, add a privileged helper, grant network authority, or claim production readiness.

The local deb metadata now records Apache-2.0 for existing-code defaults, AGPL-3.0-or-later for the no-effect CLI payload, and CC-BY-4.0 for documentation while source archive and notice obligations remain under review.

The source archive contract records the expected latticra_0.0.0.orig.tar.gz boundary while keeping archive creation, checksum acceptance, source package creation, and build transcript promotion blocked.

The package-build gate is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_BUILD_GATE_CONTRACT.md. It keeps package_build_gate_state=closed-no-effect, debian_build_allowed=0, dpkg_buildpackage_run=0, debuild_run=0, and lintian_run=0 until source, checksum, license, notice, clean build environment, operator authorization, payload inspection, install/remove transcript, and publication non-claim evidence exists.

The package-build environment contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_BUILD_ENVIRONMENT_CONTRACT.md. It documents the Debian clean build environment requirement while keeping debian_build_environment_provisioned=0, explicit_operator_build_authorization=0, environment_transcript_present=0, and all Debian package build commands disabled.

The package artifact naming contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_ARTIFACT_NAMING_CONTRACT.md. It records future Debian source and binary artifact names while keeping package_artifact_created=0, repository_package_artifact_write_allowed=0, and package_artifact_sha256_recorded=0.

The package payload inspection contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_PAYLOAD_INSPECTION_CONTRACT.md. It records the expected Debian payload paths while keeping debian_payload_inspection_run=0, package_payload_accepted=0, and package_artifact_created=0.

The package install/remove transcript contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_INSTALL_REMOVE_TRANSCRIPT_CONTRACT.md. It records future disposable install/remove transcript requirements while keeping debian_package_install_run=0, debian_package_remove_run=0, and install_on_host_run=0.

The package publication non-claim review contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_PUBLICATION_NON_CLAIM_REVIEW_CONTRACT.md. It records local-only Debian publication non-claims while keeping debian_package_publication_claimed=0, debian_dput_run=0, and package validation promotion blocked.

The package validation promotion blocker matrix is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_VALIDATION_PROMOTION_BLOCKER_MATRIX_CONTRACT.md. It ties Debian source, environment, artifact, payload, install/remove, and publication non-claim blockers together while keeping debian_platform_build_evidence_accepted=0 and debian_validation_result_promoted=0.

Next Recommended Lane

```
Add a Debian package build-evidence intake denial contract before any Debian build lane can
open.
```

docs/status/FEDORA_DISPOSABLE_VM_EFFECT_GATE_CLASSIFIER_STATUS.md

Source title: Fedora Disposable VM Effect Gate Classifier Status

Lines: 112 | Words: 267 | SHA-256: ba8ea63576c3332638748e6f5df12a51deae94719e94bf7e754289d9d003ad2b

Fedora Disposable VM Effect Gate Classifier Status

Status: status alignment Date: 2026-05-21 Scope: public status record after the Fedora VM gate classifier landed on main.

Summary

Latticra now has the Fedora evidence contract, the Fedora disposable VM effect gate, and a no-effect classifier for that gate.

The classifier reports:

```
disposable_vm_effect_gate_status=eligible
disposable_vm_effect_gate_status=blocked
disposable_vm_effect_gate_status=invalid
```

This is classifier evidence only.

It does not make Latticra host-install ready, production ready, Fedora-approved, or Fedora distribution ready.

Evidence recorded

```
Fedora disposable VM effect gate classifier
source=PR #221
evidence_contract_present=1
vm_effect_gate_present=1
vm_gate_classifier_present=1
vm_gate_classifier_guard_present=1
vm_gate_classifier_docs_guard_present=1
eligible_state_defined=1
blocked_state_defined=1
invalid_state_defined=1
eligible_test_present=1
blocked_target_tests_present=1
blocked_package_tests_present=1
blocked_prior_evidence_tests_present=1
invalid_input_test_present=1
classifier_evidence_level=8
```

Current readiness classification

```
manual_host_dry_run_transcript_contract_present=1
disposable_vm_effect_gate_present=1
disposable_vm_effect_gate_classifier_present=1
disposable_vm_effect_gate_status=blocked-pending-vm-validation-lane
disposable_vm_effect_eligible=0
live_host_validation_completed=0
host_install_ready=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
```

Boundary statement

A synthetic eligible unit test proves classifier logic only.

It is not a completed Fedora VM validation record.

The project still needs a dedicated disposable Fedora VM local RPM validation lane before install-ready README wording is justified.

Guard validation

The classifier is guarded by:

```
sh scripts/test-fedora-disposable-vm-effect-gate-classifier.sh
sh scripts/test-fedora-disposable-vm-effect-gate-classifier-docs.sh
```

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-gate-classifier-status-alignment.sh
```

Expected output:

```
fedora_disposable_vm_effect_gate_classifier: ok
fedora_disposable_vm_effect_gate_classifier_docs: ok
fedora_vm_gate_classifier_status_alignment: ok
```

Next recommended Fedora lane

```
Add disposable Fedora VM local RPM validation lane
```

That lane should remain restricted to a disposable Fedora VM target with snapshot and recovery evidence.

README overhaul hold

The root README should not claim install readiness yet.

The README overhaul should wait until real validation evidence exists for:

```
manual_host_dry_run_transcript_present=1
live_host_validation_completed=1
host_install_ready=1
```

Non-claims

This status record is not production readiness, Fedora approval, or Fedora distribution readiness.

docs/status/FEDORA_DISPOSABLE_VM_LOCAL_RPM_VALIDATION_EVIDENCE_STATUS.md

Source title: Fedora Disposable VM Local RPM Validation Evidence Status

Lines: 130 | Words: 386 | SHA-256: 3a503bd9991577fdb16a75803f10b63cb193818216e21401f11ea44970698799

Fedora Disposable VM Local RPM Validation Evidence Status

Status: evidence status alignment Date: 2026-05-21 Scope: public status record after a disposable Fedora VM local RPM validation transcript reached the expected validation report.

Summary

A disposable Fedora VM local RPM validation run completed successfully against the packaging/test-path fix from PR #226.

The validation run built the local noarch Latticra RPM, ran the build-time test suite, installed the package into the disposable Fedora VM, verified package state, removed the package, verified post-removal absence, and emitted the expected deterministic validation report.

This is disposable Fedora VM local RPM validation evidence.

It is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, or a production installer claim.

Evidence source

```
source=operator disposable Fedora VM transcript
repo_branch=pr-226
followup_fix_pr=PR #226
validated_package=latticra-0.0.0-0.1.local.fc44.noarch.rpm
```

The transcript records:

```
Building target platforms: noarch
Building for target noarch
state_lattice_invariants: ok
system_bootstrap: ok
kernel: ok
kernel_lifecycle: ok
Wrote: /tmp/.../rpmbuild/RPMS/noarch/latticra-0.0.0-0.1.local.fc44.noarch.rpm
Updating / installing...
latticra-0.0.0-0.1.local.fc44
```

Validation report recorded

```
FEDORA DISPOSABLE VM LOCAL RPM VALIDATION LANE
validation_status=ok
package_name=latticra
package_version=0.0.0
package_version_recorded=1
disposable_vm_target_verified=1
snapshot_evidence_present=1
recovery_evidence_present=1
operator_consent_recorded=1
rpm_payload_listing_recorded=1
rpm_payload_is_documentation_only=1
unexpected_runtime_surface_absent=1
vm_rpmdb_mutated=1
vm_filesystem_mutated=1
install_validation_performed=1
removal_validation_performed=1
post_removal_absence_verified=1
live_host_validation_completed=1
host_install_ready=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
evidence_level=9
fedora_disposable_vm_local_rpm_validation_lane: ok
```

Current readiness classification

```
disposable_vm_local_rpm_validation_lane_present=1
disposable_vm_validation_transcript_present=1
disposable_vm_validation_completed=1
live_host_validation_completed=1
host_install_ready=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Boundary statement

This evidence is limited to a disposable Fedora VM local RPM validation path.

The current package payload remains documentation-only:

```
/usr/share/doc/latticra/README.md
```

This evidence does not add or validate:

```
/usr/bin/latticra
/etc/latticra
/usr/lib/systemd/system/latticra.service
/usr/lib/modules
/boot/latticra
```

It does not validate daily-driver installation, immutable Fedora installation, production host installation, service activation, boot integration, kernel module loading, SELinux policy changes, network operations, update safety, rollback safety beyond package removal absence, Fedora QA approval, Fedora distribution readiness, or production installer readiness.

Guard validation

The evidence status alignment is guarded by:

```
sh scripts/test-fedora-disposable-vm-local-rpm-validation-evidence-status.sh
```

Expected output:

```
fedora_disposable_vm_local_rpm_validation_evidence_status: ok
```

Next recommended Fedora lane

```
Add README install-readiness wording limited to disposable Fedora VM local RPM validation
```

That wording must remain narrow and should not claim production, Fedora distribution, immutable Fedora, daily-driver, security, recovery, or OS-replacement readiness.

Non-claims

This status record is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, update safety, recovery safety, malware prevention, ransomware prevention, sandboxing, or a production installer claim.

docs/status/FEDORA_DISPOSABLE_VM_LOCAL_RPM_VALIDATION_STATUS.md

Source title: Fedora Disposable VM Local RPM Validation Status

Lines: 126 | Words: 341 | SHA-256: 897b76013a55f8e0d837de6a0c053829c545aa84df7151537971422d3796b36b

Fedora Disposable VM Local RPM Validation Status

Status: status alignment Date: 2026-05-21 Scope: public status record after the gated disposable Fedora VM local RPM validation lane landed on main.

Summary

Latticra now has a manually gated disposable Fedora VM local RPM validation lane.

The lane defines and ships:

```
docs/FEDORA_DISPOSABLE_VM_LOCAL_RPM_VALIDATION_LANE.md
scripts/run-fedora-disposable-vm-local-rpm-validation-lane.sh
scripts/test-fedora-disposable-vm-local-rpm-validation-lane-docs.sh
.github/workflows/fedora-vm-rpm-validation-lane-docs.yml
```

This is lane-readiness evidence only.

It does not prove that a disposable Fedora VM validation run has completed yet.

The validation runner remains manually gated and must not be auto-run by normal CI.

Evidence recorded

```
Fedora disposable VM local RPM validation lane
source=PR #223
validation_lane_documented=1
validation_runner_present=1
validation_lane_docs_guard_present=1
validation_lane_docs_workflow_present=1
runner_manual_only=1
ci_auto_vm_rpm_validation_allowed=0
disposable_vm_target_required=1
daily_driver_block_required=1
production_host_block_required=1
immutable_fedora_block_required=1
clean_snapshot_required=1
recovery_path_required=1
operator_consent_required=1
rpm_payload_listing_required=1
rpm_payload_documentation_only_required=1
unexpected_runtime_surface_absent_required=1
validation_report_schema_present=1
target_evidence_level=9
current_evidence_level=8
evidence_level_9_achieved=0
```

Current readiness classification

```
manual_host_dry_run_transcript_contract_present=1
disposable_vm_effect_gate_present=1
disposable_vm_effect_gate_classifier_present=1
disposable_vm_local_rpm_validation_lane_present=1
disposable_vm_local_rpm_validation_status=blocked-pending-real-vm-run
disposable_vm_validation_transcript_present=0
disposable_vm_validation_completed=0
live_host_validation_completed=0
host_install_ready=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
```

Boundary statement

This status alignment does not run the validation lane.

It does not install or remove an RPM.

It does not mutate a disposable VM, developer host, daily-driver Fedora host, immutable Fedora host, production host, boot entry, kernel module set, service registry, SELinux policy, firmware state, or network configuration.

The docs guard may run in CI.

The RPM validation runner must remain manual and gated by explicit disposable-VM evidence.

Guard validation

The validation lane documentation is guarded by:

```
sh scripts/test-fedora-disposable-vm-local-rpm-validation-lane-docs.sh
```

This status alignment is guarded by:

```
sh scripts/test-fedora-disposable-vm-local-rpm-validation-status-alignment.sh
```

Expected output:

```
fedora_disposable_vm_local_rpm_validation_lane_docs: ok
fedora_disposable_vm_local_rpm_validation_status_alignment: ok
```

Next recommended Fedora lane

```
Capture disposable Fedora VM local RPM validation transcript evidence
```

That lane should record the Fedora VM identity, clean snapshot evidence, recovery path evidence, package version, RPM payload listing, install transcript, removal transcript, post-removal absence proof, and emitted validation report.

README overhaul hold

The root README should not claim install readiness yet.

The README overhaul remains blocked until real validation evidence exists for:

```
disposable_vm_validation_transcript_present=1
disposable_vm_validation_completed=1
live_host_validation_completed=1
host_install_ready=1
```

Non-claims

This status record is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, or a production installer claim.

docs/status/FEDORA_DISPOSABLE_VM_RPM_README_ALIGNMENT_STATUS.md

Source title: Fedora Disposable VM RPM README Alignment Status

Lines: 92 | Words: 255 | SHA-256: 77f1fe94e7dfb553f398c4cc32f9d67e2f1e702b78c35f0a38c8adee6263c8ce

Fedora Disposable VM RPM README Alignment Status

Status: README/status alignment Date: 2026-05-21 Scope: root README wording after successful disposable Fedora VM local RPM validation evidence was recorded.

Summary

The root README now records the narrow Fedora install-readiness posture supported by the evidence:

```
disposable_vm_local_rpm_validation_completed=1
host_install_ready=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

This wording is intentionally limited to a disposable Fedora VM local RPM validation path.

It does not claim production readiness, Fedora approval, Fedora distribution readiness, immutable Fedora readiness, daily-driver safety, security capability, update safety, recovery safety, sandboxing, malware prevention, ransomware prevention, or OS-replacement readiness.

Evidence linked

The README links to:

```
docs/status/FEDORA_DISPOSABLE_VM_LOCAL_RPM_VALIDATION_EVIDENCE_STATUS.md
docs/FEDORA_DISPOSABLE_VM_LOCAL_RPM_VALIDATION_LANE.md
docs/FEDORA_DISPOSABLE_VM_LOCAL_RPM_VALIDATION_TRANSCRIPT_CONTRACT.md
```

README wording boundaries

The README must preserve these boundaries:

```
validated package is documentation-only
validated path is disposable Fedora VM only
validated payload is /usr/share/doc/latticra/README.md
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

The README must not claim:

```
production ready
Fedora approved
Fedora distribution ready
daily-driver safe
immutable Fedora ready
bootable OS replacement
kernel runtime ready
security product
malware prevention
ransomware prevention
sandboxing
update safety
recovery safety
```

Guard validation

This README alignment is guarded by:

```
sh scripts/test-fedora-disposable-vm-rpm-readme-alignment.sh
```

Expected output:

```
fedora_disposable_vm_rpm_readme_alignment: ok
```

Next recommended lane

```
Add public announcement wording for disposable Fedora VM RPM validation milestone
```

That announcement must stay evidence-bound and preserve all non-claims.

Non-claims

This status record is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, update safety, recovery safety, malware prevention, ransomware prevention, sandboxing, or a production installer claim.

docs/status/FEDORA_HOST_INSTALL_PREFLIGHT_STATUS.md

Source title: Fedora Host Install Preflight Status

Lines: 74 | Words: 196 | SHA-256: eb7242df167e66c3788ccaa9e72a8d9e38c24477838aecd5ed927c01d5e3eab2

Fedora Host Install Preflight Status

Status: merged no-effect Fedora preflight classifier

This record tracks the Fedora host install preflight classifier slice.

Merged PR:

```
#198 Add Fedora host install preflight classifier
```

Merged commit:

```
bbcb42afce009a29b7ba5c0ea8b354a9bca93966
```

Primary files:

```
include/latticra/fedora_host_install_preflight.h
src/fedora_host_install_preflight.c
tests/fedora_host_install_preflight.c
docs/FEDORA_HOST_INSTALL_PREFLIGHT_CLASSIFIER.md
scripts/test-fedora-host-install-preflight.sh
scripts/test-fedora-host-install-preflight-docs.sh
.github/workflows/fedora-host-install-preflight.yml
```

What it adds:

```
Fedora host snapshot classifier
mutable Fedora host label
immutable Fedora future-gated label
local RPM candidate label
network-required denial
missing rpm/dnf denial
missing local RPM denial
missing privilege denial
doc-only runtime-entrypoint denial
no-effect install report fields
```

Report boundary:

```
FEDORA HOST INSTALL PREFLIGHT
classification=ready-local-rpm
host_install_candidate=1
host_install_performed=0
host_mutation_performed=0
network_allowed=0
no_effect=1
evidence_level=1
```

Validation:

```
sh scripts/test-fedora-host-install-preflight.sh
sh scripts/test-fedora-host-install-preflight-docs.sh
```

Boundary: preflight classification only. No host install, dnf execution, rpm execution, rpmbuild execution, rpmlint execution, package artifact creation, host mutation, network opening, service installation, boot entry installation, kernel module installation, Fedora approval claim, or production installer readiness is added.

Recommended next slice:

```
Add Fedora install preflight snapshot capture plan
```

That future slice should define how a caller may safely collect /etc/os-release, rpm, dnf, privilege, and local RPM facts before passing them into the classifier. It should remain read-only and should not install anything.

docs/status/FEDORA_INSTALL_PREFLIGHT_SNAPSHOT_CAPTURE_STATUS.md

Source title: Fedora Install Preflight Snapshot Capture Status

Lines: 78 | Words: 226 | SHA-256: 171bd8ee0e1f6d1bac7c457d39093f9bf56b39b23a37c9906cfbb5fb174d3e13

Fedora Install Preflight Snapshot Capture Status

Status: merged no-effect Fedora snapshot capture implementation

This record tracks the Fedora install preflight snapshot capture implementation slice.

Merged PR:

```
#201 Implement Fedora install preflight snapshot capture
```

Merged commit:

```
e8a898ee1cab776c90b4c9d4741f5dc4f67e25e5
```

Primary files:

```
include/latticra/fedora_install_preflight_snapshot.h
src/fedora_install_preflight_snapshot.c
tests/fedora_install_preflight_snapshot.c
docs/FEDORA_INSTALL_PREFLIGHT_SNAPSHOT_CAPTURE_IMPLEMENTATION.md
scripts/test-fedora-install-preflight-snapshot-capture.sh
scripts/test-fedora-install-preflight-snapshot-capture-docs.sh
.github/workflows/fedora-install-preflight-snapshot-capture.yml
```

What it adds:

```
bounded os-release text parsing from caller-provided memory
ID and ID_LIKE extraction
immutable Fedora marker propagation
RPM tooling presence propagation
local RPM path and readability propagation
conservative privilege fact propagation
network-required propagation
doc-only package posture propagation
classifier forwarding
deterministic snapshot capture report
```

Report boundary:

```
FEDORA INSTALL PREFLIGHT SNAPSHOT CAPTURE
snapshot_capture_status=captured
classifier_classification=ready-local-rpm
snapshot_forwarded_to_classifier=1
sudo_validation_allowed=0
install_command_allowed=0
package_build_allowed=0
network_allowed=0
host_mutation_performed=0
host_install_performed=0
no_effect=1
evidence_level=2
```

Validation:

```
sh scripts/test-fedora-install-preflight-snapshot-capture.sh
sh scripts/test-fedora-install-preflight-snapshot-capture-docs.sh
```

Boundary: implementation status alignment only. The merged implementation consumes caller-supplied facts and does not probe the live host by itself. No host install, host mutation, network opening, sudo validation, package artifact creation, package build behavior, package install behavior, service operation, boot entry operation, kernel module operation, Fedora approval claim, or production installer readiness is added.

Recommended next slice:

```
Add Fedora live read-only snapshot capture adapter
```

That future slice may introduce an adapter that reads/probes the host in a bounded read-only way and then feeds the existing snapshot capture API. It must still preserve host mutation and install as disabled.

docs/status/FEDORA_INSTALLROOT_RPM_LIFECYCLE_STATUS.md

Source title: Fedora Installroot RPM Lifecycle Status

Lines: 65 | Words: 244 | SHA-256: 5496779568e28756e1c844b81d40ca83c26b6b6a1b4af847abb6bbd39dd6d165

Fedora Installroot RPM Lifecycle Status

Status: status alignment Date: 2026-05-21 Scope: public status record after the Fedora installroot RPM lifecycle lane landed on main.

Summary

Latticra now has a mainline Fedora RPM lifecycle lane that can build the local-only RPM and exercise install/remove behavior inside a temporary RPM installroot.

This is controlled lifecycle evidence, not live host installer readiness.

Evidence recorded

```
Fedora installroot RPM lifecycle lane
source=PR #213
execution_lane_documented=1
execution_guard_present=1
local_rpm_build_path=present
installroot_rpm_database_path=temporary
installroot_filesystem_mutated=1
installroot_rpmdb_mutated=1
live_container_rpmdb_mutated=0
developer_host_mutation_performed=0
boot_operation_performed=0
kernel_operation_performed=0
service_operation_performed=0
policy_operation_performed=0
network_allowed_during_rpm_execution=0
post_removal_absence_verified=1
rollback_planned=1
partial_failure_report_required=1
evidence_level=6
```

Current readiness classification

```
controlled_installroot_lifecycle_ready=1
manual_host_install_ready=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
```

What this means

The project is ready to validate the RPM lifecycle in a bounded Fedora installroot context.

The project is not yet ready to install on a user workstation or make production installer claims.

Next recommended Fedora lane

```
Add manual host-install release-candidate checklist
```

That checklist should define the exact human review and evidence required before any live Fedora host install attempt.

Non-claims

This status record does not install Latticra on a developer host, daily-driver Fedora system, immutable Fedora host, VM host, production host, live Fedora container RPM database, or user workstation.

It does not publish artifacts, submit to Fedora, claim Fedora approval, claim production installer readiness, validate sudo on a user host, start services, change boot entries, load kernel modules, modify SELinux policy, open runtime network access, or assert that Latticra is ready as a system installer.

docs/status/FEDORA_LIVE_READONLY_SNAPSHOT_ADAPTER_STATUS.md

Source title: Fedora Live Read-Only Snapshot Adapter Status

Lines: 84 | Words: 234 | SHA-256: f18c399f4d53c65dfe15177a862112b0cbac150a2e5333226ce62e7a46f5b719

Fedora Live Read-Only Snapshot Adapter Status

Status: merged live read-only Fedora adapter implementation

This record tracks the Fedora live read-only snapshot adapter implementation slice.

Merged PR:

```
#203 Add Fedora live read-only snapshot adapter
```

Merged commit:

```
df2dba248eb1fcd6d37d9fa2f9dfae830b08a468
```

Primary files:

```
include/latticra/fedora_live_snapshot_adapter.h
src/fedora_live_snapshot_adapter.c
tests/fedora_live_snapshot_adapter.c
docs/FEDORA_LIVE_READONLY_SNAPSHOT_ADAPTER.md
scripts/test-fedora-live-snapshot-adapter.sh
scripts/test-fedora-live-snapshot-adapter-docs.sh
.github/workflows/fedora-live-snapshot-adapter.yml
```

Local Fedora live validation:

```
sh scripts/test-fedora-live-snapshot-adapter.sh
sh scripts/test-fedora-live-snapshot-adapter-docs.sh
fedora_live_snapshot_adapter: ok
fedora_live_snapshot_adapter_docs: ok
```

What it adds:

```
live read-only os-release path capture
live read-only PATH command presence probing
live read-only local RPM readability probing
live read-only immutable Fedora marker probing
live read-only effective-root status recording
forwarding into Fedora snapshot capture
forwarding into Fedora host install preflight classifier
deterministic live adapter report
```

Report boundary:

```
FEDORA LIVE READ-ONLY SNAPSHOT ADAPTER
live_probe_performed=1
snapshot_forwarded_to_classifier=1
sudo_validation_allowed=0
install_command_allowed=0
package_build_allowed=0
network_allowed=0
host_mutation_performed=0
host_install_performed=0
no_effect=1
```

```
evidence_level=3
```

Validation:

```
sh scripts/test-fedora-live-snapshot-adapter.sh
sh scripts/test-fedora-live-snapshot-adapter-docs.sh
```

Boundary: live read-only host fact capture only. No install behavior, sudo validation, package build behavior, package installation, host mutation, network opening, service operation, boot entry operation, kernel module operation, Fedora approval claim, or production installer readiness is added.

Recommended next slice:

```
Add Fedora local RPM install mutation gate contract
```

That future slice should define the exact hard gate before any install mutation can be represented. It should require explicit operator confirmation, mutable Fedora classification, local RPM presence, privilege availability, local-only mode, and rollback/removal plan evidence before install execution can be implemented.

docs/status/FEDORA_MANUAL_HOST_RC_CHECKLIST_STATUS.md

Source title: Fedora Manual Host RC Checklist Status

Lines: 133 | Words: 415 | SHA-256: 345718e2851c08f71ba7c9b4f7b01c1bf8bf28bdf0e11753204e5e04dc2d7812

Fedora Manual Host RC Checklist Status

Status: status alignment Date: 2026-05-21 Scope: public status record after the Fedora manual host release-candidate checklist landed on main.

Summary

Latticra now has a Fedora manual host release-candidate checklist.

The checklist defines the evidence required before any future manual Fedora host validation milestone may be called a release candidate.

This is checklist and status evidence only.

It does not make Latticra ready for live host installation, production installation, Fedora distribution, or Fedora approval.

Fedora terminology boundary

In this record, manual host RC means an internal Latticra manual-host validation candidate.

It does not mean a Fedora release candidate compose, Fedora QA validation event, Fedora Go/No-Go result, Fedora acceptance, Fedora package approval, or Fedora distribution readiness.

Evidence recorded

```
Fedora manual host RC checklist
source=PR #215
checklist_documented=1
checklist_guard_present=1
controlled_installroot_lifecycle_ready=1
manual_host_rc_status=blocked
manual_host_release_candidate_ready=0
live_host_validation_completed=0
host_change_performed=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
fedora_candidate_compose_claimed=0
fedora_go_no_go_claimed=0
checklist_target_evidence_level=7
current_evidence_level=6
evidence_level_7_achieved=0
```

Required evidence before candidate state

The checklist keeps the manual-host candidate state blocked until the project records all of the following:

```
target_is_disposable_fedora_vm=1
target_is_daily_driver=0
target_is_production_host=0
target_is_immutable_fedora=0
target_has_clean_snapshot=1
target_has_recovery_path=1
operator_consent_recorded=1
local_rpm_built_from_current_tree=1
rpm_payload_listing_recorded=1
rpm_payload_is_documentation_only=1
unexpected_runtime_surface_absent=1
installroot_lifecycle_evidence_present=1
post_removal_absence_evidence_present=1
host_preflight_classification=ready-local-rpm
rpm_gate_status=allowed
removal_rollback_status=removal-ready
```

Current readiness classification

```
manual_host_rc_checklist_present=1
manual_host_rc_guard_present=1
manual_host_rc_status=blocked
manual_host_release_candidate_ready=0
live_host_validation_completed=0
host_install_ready=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
```

Guard validation

The checklist is currently guarded by:

```
sh scripts/test-fedora-manual-host-rc-checklist.sh
```

This status alignment is guarded by:

```
sh scripts/test-fedora-manual-host-rc-checklist-status-alignment.sh
```

Expected output:

```
fedora_manual_host_rc_checklist: ok
fedora_manual_host_rc_checklist_status_alignment: ok
```

Honest public wording

After this status alignment lands, the project may say:

```
Latticra has controlled Fedora installroot RPM lifecycle evidence.
Latticra has a manual Fedora host release-candidate checklist.
Latticra has status alignment that keeps manual host RC readiness blocked until explicit
evidence is recorded.
```

The project must not say:

```
Latticra has completed live Fedora host validation.
Latticra is safe for daily-driver installation.
Latticra is production installer ready.
Latticra is Fedora-approved.
Latticra is ready for Fedora distribution.
```

Next recommended Fedora lane

```
Add no-effect Fedora manual host RC decision classifier
```

That classifier should consume explicit checklist evidence and report blocked or candidate without running sudo, rpm, dnf, service operations, boot operations, kernel operations, policy operations, network operations, or host mutation.

Non-claims

This status record does not perform host changes, install Latticra on a developer host, validate a daily-driver Fedora system, publish artifacts, submit to Fedora, claim Fedora approval, claim Fedora distribution readiness, claim production installer readiness, start services, change boot entries, load kernel modules, change host policy, or open runtime network access.

docs/status/FEDORA_MANUAL_HOST_RC_DECISION_CLASSIFIER_STATUS.md

Source title: Fedora Manual Host RC Decision Classifier Status

Lines: 137 | Words: 379 | SHA-256: 2646b798eb6d3f41890f0bd2fc2a63c599532b79ac0ed4842cada7d4b65fd445

Fedora Manual Host RC Decision Classifier Status

Status: status alignment Date: 2026-05-21 Scope: public status record after the no-effect Fedora manual host RC decision classifier landed on main.

Summary

Latticra now has a no-effect Fedora manual host release-candidate decision classifier.

The classifier consumes explicit checklist-style evidence and reports one of:

```
manual_host_rc_status=candidate
manual_host_rc_status=blocked
manual_host_rc_status=invalid
```

This is decision evidence only.

It does not perform host changes, live validation, Fedora QA, Fedora approval, Fedora distribution readiness, or production readiness.

Evidence recorded

```
Fedora manual host RC decision classifier
source=PR #217
decision_classifier_present=1
decision_classifier_guard_present=1
decision_classifier_docs_guard_present=1
candidate_state_defined=1
blocked_state_defined=1
invalid_state_defined=1
synthetic_candidate_test_present=1
blocked_target_tests_present=1
blocked_evidence_tests_present=1
blocked_boundary_tests_present=1
invalid_input_test_present=1
classifier_evidence_level=7
live_host_validation_completed=0
host_change_performed=0
sudo_invoked=0
rpm_invoked=0
dnf_invoked=0
network_allowed=0
service_operation_allowed=0
boot_operation_allowed=0
kernel_operation_allowed=0
policy_operation_allowed=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
```

Current readiness classification

```
manual_host_rc_checklist_present=1
manual_host_rc_decision_classifier_present=1
manual_host_rc_status=blocked-pending-real-transcript
manual_host_release_candidate_ready=0
manual_host_dry_run_transcript_present=0
live_host_validation_completed=0
host_install_ready=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
```

Candidate boundary

The classifier can report candidate only when explicit evidence says all required conditions are satisfied.

A synthetic unit-test candidate is not a real Fedora host validation candidate.

A real candidate still requires a concrete reviewed transcript from a disposable Fedora VM target.

Guard validation

The classifier is guarded by:

```
sh scripts/test-fedora-manual-host-rc-decision-classifier.sh
sh scripts/test-fedora-manual-host-rc-decision-classifier-docs.sh
```

This status alignment is guarded by:

```
sh scripts/test-fedora-manual-host-rc-decision-status-alignment.sh
```

Expected output:

```
fedora_manual_host_rc_decision_classifier: ok
fedora_manual_host_rc_decision_classifier_docs: ok
fedora_manual_host_rc_decision_status_alignment: ok
```

Honest public wording

After this status alignment lands, the project may say:

```
Latticra has controlled Fedora installroot RPM lifecycle evidence.
Latticra has a manual Fedora host RC checklist.
Latticra has a no-effect decision classifier for manual Fedora host RC evidence.
```

```
Latticra is preparing the dry-run transcript layer required before live host validation.
```

The project must not say:

```
Latticra has completed live Fedora host validation.
Latticra is production ready.
Latticra is Fedora-approved.
Latticra is ready for Fedora distribution.
```

Next recommended Fedora lane

```
Add manual Fedora host dry-run transcript contract
```

That contract should define the transcript evidence required before any future disposable Fedora VM validation attempt.

README overhaul hold

The root README overhaul should wait until the repository has real validation evidence for the host path.

Until then, root README wording should remain evidence-bound and avoid readiness claims.

Non-claims

This status record does not perform host changes, live validation, Fedora QA approval, Fedora distribution readiness, or production readiness.

docs/status/FEDORA_RPM_GATE_CLASSIFIER_STATUS.md

Source title: Fedora RPM Gate Classifier Status

Lines: 79 | Words: 197 | SHA-256: 87e5781f562fb8942c87fb9779a3d907daecd281cc542fd9bde1a5a8720179c6

Fedora RPM Gate Classifier Status

Status: merged Fedora RPM gate classifier implementation

This record tracks the Fedora RPM gate classifier implementation slice.

Merged PR:

```
#207 Add Fedora RPM gate classifier
```

Merged commit:

```
e3e6cf85cf59c2634c0a67c7d4318afc2c86388a
```

Primary files:

```
include/latticra/fedora_rpm_gate.h
src/fedora_rpm_gate.c
tests/fedora_rpm_gate.c
docs/FEDORA_RPM_GATE_CLASSIFIER.md
scripts/test-fedora-rpm-gate-classifier.sh
scripts/test-fedora-rpm-gate-classifier-docs.sh
.github/workflows/fedora-rpm-gate-classifier.yml
```

Local Fedora validation:

```
sh scripts/test-fedora-rpm-gate-classifier.sh
sh scripts/test-fedora-rpm-gate-classifier-docs.sh
fedora_rpm_gate_classifier: ok
fedora_rpm_gate_classifier_docs: ok
```

What it adds:

```
Fedora RPM gate input record
Fedora RPM gate result record
allowed and denied gate status labels
deterministic denial reasons
gate report surface
evidence level 4 classifier boundary
```

Report boundary:

```
FEDORA LOCAL RPM INSTALL MUTATION GATE
install_gate_status=allowed
install_gate_denial=none
install_mutation_allowed=1
install_mutation_performed=0
host_mutation_performed=0
network_allowed=0
evidence_level=4
```

Validation:

```
sh scripts/test-fedora-rpm-gate-classifier.sh
sh scripts/test-fedora-rpm-gate-classifier-docs.sh
```

Boundary: classifier only. It reports allowed or denied states and deterministic denial reasons. It does not execute package actions, validate sudo, build packages, open the network, start services, change boot entries, load kernel modules, claim Fedora approval, or claim production installer readiness.

Recommended next slice:

```
Add Fedora local RPM removal and rollback plan
```

That future slice should define package identification, ownership verification, uninstall request boundaries, post-removal absence checks, and failure reporting before any execution lane is added.

docs/status/FEDORA_VM_CLI_PAYLOAD_NEXT_VALIDATION_LANE_PLAN_STATUS.md

Source title: Fedora VM CLI Payload Next Validation Lane Plan Status

Lines: 69 | Words: 188 | SHA-256: 0de7b4a0cd7d4f48d0a0ff0f80189bda4ccbb95c13d9dca3ea4f140fd4df46a7

Fedora VM CLI Payload Next Validation Lane Plan Status

Status: plan/status alignment Date: 2026-05-26 Scope: status record for the next manual disposable Fedora VM CLI payload validation lane plan.

Summary

Latticra now has a Fedora VM CLI payload next-validation lane plan.

The plan defines a future repeatability-evidence lane for the accepted no-effect CLI payload:

```
disposable_vm_cli_validation_completed=1
host_install_ready_for_cli_payload=1
validated_package=latticra-0.0.0-0.1.local.fc44.x86_64.rpm
validated_payload=/usr/bin/latticra
validated_payload=/usr/share/doc/latticra/README.md
evidence_level=9
```

The plan does not add a runner or execute host mutation.

Required next-lane evidence

The future lane must record:

```
source_tree_revision_recorded=1
fedora_os_release_recorded=1
fedora_kernel_version_recorded=1
spec_checksum_recorded=1
source_archive_checksum_recorded=1
rpm_nevra_recorded=1
rpm_payload_listing_recorded=1
rpm_payload_matches_expected_cli_surfaces=1
unexpected_runtime_surface_absent=1
cli_status_output_recorded=1
cli_version_output_recorded=1
cli_report_output_recorded=1
cli_invalid_command_exit_recorded=1
```

```
rpm_verify_completed=1
removal_validation_performed=1
post_removal_absence_verified=1
```

Guard validation

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-next-validation-lane-plan.sh
```

Expected output:

```
fedora_vm_cli_payload_next_validation_lane_plan: ok
```

Next recommended lane

```
Add Fedora VM CLI payload repeatability transcript contract
```

Non-claims

This status record is not a runner, not a package install, not host mutation, not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, not update safety, not recovery safety, not malware prevention, not ransomware prevention, not sandboxing, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_README_ALIGNMENT_STATUS.md

Source title: Fedora VM CLI Payload README Alignment Status

Lines: 97 | Words: 273 | SHA-256: cd625bedb8ebd15ce7ee6f9eef4d77d2f11de3cf59acbac49d13b66519e0742e

Fedora VM CLI Payload README Alignment Status

Status: README/status alignment Date: 2026-05-26 Scope: root README wording after accepted disposable Fedora VM CLI payload validation evidence was recorded.

Summary

The root README now records the narrow Fedora CLI payload posture supported by the accepted disposable VM evidence:

```
fedora_vm_cli_payload_validation_status=evidence-recorded
disposable_vm_cli_validation_transcript_present=1
disposable_vm_cli_validation_completed=1
host_install_ready_for_cli_payload=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

This wording is limited to the no-effect CLI payload validated in a disposable Fedora VM.

It does not claim production readiness, Fedora approval, Fedora distribution readiness, immutable Fedora readiness, daily-driver safety, security capability, update safety, recovery safety, sandboxing, malware prevention, ransomware prevention, or OS-replacement readiness.

Evidence linked

The README links to:

```
docs/FEDORA_VM_CLI_PAYLOAD_VALIDATION_LANE.md
docs/status/FEDORA_VM_CLI_PAYLOAD_VALIDATION_STATUS.md
docs/status/FEDORA_VM_CLI_PAYLOAD_VALIDATION_EVIDENCE_STATUS.md
docs/status/FEDORA_VM_CLI_PAYLOAD_README_ALIGNMENT_STATUS.md
packaging/fedora/latticra.spec
```

README wording boundaries

The README must preserve these boundaries:

```
validated path is disposable Fedora VM only
validated payload includes /usr/bin/latticra
validated payload includes /usr/share/doc/latticra/README.md
validated CLI mode is no-effect
validated runtime_behavior is disabled
host_install_ready_for_cli_payload=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

The README must not claim:

```
production ready
Fedora approved
Fedora distribution ready
daily-driver safe
immutable Fedora ready
security product
update safety
recovery safety
sandboxing
malware prevention
ransomware prevention
bootable OS replacement
kernel runtime ready
```

Guard validation

This README alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-readme-alignment.sh
```

Expected output:

```
fedora_vm_cli_payload_readme_alignment: ok
```

Next recommended lane

```
Plan the next Fedora CLI payload validation lane without widening README or announcement claims
beyond disposable Fedora VM evidence
```

Non-claims

This status record is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, update safety, recovery safety, malware prevention, ransomware prevention, sandboxing, or a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_REPEATABILITY_EVIDENCE_ACCEPTANCE_CONTRACT_STATUS.md

Source title: Fedora VM CLI Payload Repeatability Evidence Acceptance Contract Status

Lines: 60 | Words: 205 | SHA-256: 1f5750cf69cd4cf83aca99fe47d07e84a203f626c3e062653bd2a793c39f190b

Fedora VM CLI Payload Repeatability Evidence Acceptance Contract Status

Status: acceptance contract/status alignment Date: 2026-05-26 Scope: status record for the Fedora VM CLI payload repeatability evidence acceptance contract.

Summary

Latticra now has a static acceptance contract for the future Fedora VM CLI payload repeatability evidence status record.

The contract defines the required accepted evidence fields after a real disposable Fedora VM repeatability transcript is validated and reviewed.

It does not attach a transcript.

It does not write evidence status.

It does not mark repeatability evidence present.

Current classification

```
fedora_vm_cli_payload_repeatability_evidence_acceptance_contract_present=1
repeatability_transcript_attached=0
repeatability_transcript_reviewed=0
repeatability_transcript_candidate_valid=0
repeatability_transcript_accepted=0
evidence_status_written=0
second_disposable_vm_cli_validation_completed=0
cli_payload_repeatability_evidence_present=0
host_install_ready_for_cli_payload=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Guard validation

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-repeatability-evidence-acceptance-contract.sh
```

Expected output:

```
fedora_vm_cli_payload_repeatability_evidence_acceptance_contract: ok
```

Next recommended lane

```
Run manual disposable Fedora VM CLI payload repeatability lane, validate transcript candidate,
and write accepted repeatability evidence status
```

Non-claims

This status record is not repeatability evidence, not a completed transcript, not a second disposable Fedora VM validation run, not host mutation, not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, not update safety, not recovery safety, not sandboxing, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_REPEATABILITY_EVIDENCE_PUBLICATION_GATE_STATUS.md

Source title: Fedora VM CLI Payload Repeatability Evidence Publication Gate Status

Lines: 67 | Words: 218 | SHA-256: 0e11d0dd3ee5e61dfcd0d335a91dbb1295e69dd3b2d5d964ffae92441fe9dc9d

Fedora VM CLI Payload Repeatability Evidence Publication Gate Status

Status: publication gate/status alignment Date: 2026-05-26 Scope: status record for the Fedora VM CLI payload repeatability evidence publication gate.

Summary

Latticra now has a static publication gate for future Fedora VM CLI payload repeatability evidence.

The gate prevents a passing evidence status candidate review from being treated as published evidence.

It does not run the repeatability runner.

It does not write evidence status.

It does not publish repeatability evidence.

Current classification

```
fedora_vm_cli_payload_repeatability_evidence_publication_gate_present=1
fedora_vm_cli_payload_repeatability_evidence_status_review_validator_present=1
repeatability_evidence_status_candidate_valid=0

Source title: Fedora VM CLI Payload Repeatability Evidence Status Template Status

Lines: 65 | Words: 219 | SHA-256: 1090b2f5f72ee4c99bcc274bcb8bc11615463fda26bc08b4fc9cce16d5ab505e

Fedora VM CLI Payload Repeatability Evidence Status Template Status

Status: template/status alignment Date: 2026-05-26 Scope: status record for the Fedora VM CLI payload repeatability evidence status template.

Summary

Latticra now has a no-effect stdout template for a future accepted Fedora VM CLI payload repeatability evidence status record.

The template is only usable after a real disposable Fedora VM repeatability transcript is attached, validated, and reviewed.

It does not run the repeatability runner.

It does not attach a transcript.

It does not write evidence status.

It does not mark repeatability evidence present.

Current classification

```
fedora_vm_cli_payload_repeatability_evidence_acceptance_contract_present=1

Lines: 67 | Words: 189 | SHA-256: 73491a993b13fd807ac0411ee2a6adf314b688a493b7f4464eac650331f6d05e

Fedora VM CLI Payload Repeatability Runner Plan Status

Status: plan/status alignment Date: 2026-05-26 Scope: status record for the Fedora VM CLI payload repeatability runner plan and manual runner implementation.

Summary

Latticra now has a plan and manually gated runner for disposable Fedora VM CLI payload repeatability validation.

The plan maps the repeatability transcript contract into a runner shape, and the runner is present as a manual-only script.

The runner remains gated by:

```
LATTICRA_ALLOW_DISPOSABLE_VM_RPM_VALIDATION=1
LATTICRA_ALLOW_CLI_PAYLOAD_REPEATABILITY_VALIDATION=1
LATTICRA_TARGET_IS_DISPOSABLE_FEDORA_VM=1
LATTICRA_TARGET_IS_DAILY_DRIVER=0
LATTICRA_TARGET_IS_PRODUCTION_HOST=0
LATTICRA_TARGET_IS_IMMUTABLE_FEDORA=0
LATTICRA_TARGET_HAS_CLEAN_SNAPSHOT=1
LATTICRA_TARGET_HAS_RECOVERY_PATH=1
LATTICRA_OPERATOR_CONSENT_RECORDED=1
```

Current classification

```
fedora_vm_cli_payload_repeatability_transcript_contract_present=1

ci_auto_repeatability_validation_allowed=0
second_disposable_vm_cli_validation_completed=0
cli_payload_repeatability_evidence_present=0
host_install_ready_for_cli_payload=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Guard validation

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-repeatability-runner-plan.sh
```

Expected output:

```
fedora_vm_cli_payload_repeatability_runner_plan: ok
```

Next recommended lane

```
Capture reviewed Fedora VM CLI payload repeatability transcript evidence
```

Non-claims

This status record is not RPM install evidence, not a second disposable Fedora VM validation run, not host mutation, not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, not update safety, not recovery safety, not sandboxing, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_REPEATABILITY_RUNNER_STATUS.md

Source title: Fedora VM CLI Payload Repeatability Runner Status

Lines: 75 | Words: 193 | SHA-256: 6534f264a8783cf3b5d2cc472d237d242d97290d3a9bf7414342147600094e7e

Fedora VM CLI Payload Repeatability Runner Status

Status: runner/status alignment Date: 2026-05-26 Scope: status record for the manually gated Fedora VM CLI payload repeatability runner.

Summary

Latticra now has a manual-only disposable Fedora VM CLI payload repeatability runner.

The runner is present at:

```
scripts/run-fedora-vm-cli-payload-repeatability-lane.sh
```

It is gated by both disposable-VM RPM validation consent and CLI payload repeatability consent.

It must not be called by normal CI.

Current classification

```
fedora_vm_cli_payload_repeatability_transcript_contract_present=1
fedora_vm_cli_payload_repeatability_runner_plan_present=1
fedora_vm_cli_payload_repeatability_runner_present=1
repeatability_runner_manual_only=1
ci_auto_repeatability_validation_allowed=0
second_disposable_vm_cli_validation_completed=0
cli_payload_repeatability_evidence_present=0
host_install_ready_for_cli_payload=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Required gates

```
LATTICRA_ALLOW_DISPOSABLE_VM_RPM_VALIDATION=1
LATTICRA_ALLOW_CLI_PAYLOAD_REPEATABILITY_VALIDATION=1
LATTICRA_TARGET_IS_DISPOSABLE_FEDORA_VM=1
LATTICRA_TARGET_IS_DAILY_DRIVER=0
LATTICRA_TARGET_IS_PRODUCTION_HOST=0
LATTICRA_TARGET_IS_IMMUTABLE_FEDORA=0
LATTICRA_TARGET_HAS_CLEAN_SNAPSHOT=1
LATTICRA_TARGET_HAS_RECOVERY_PATH=1
LATTICRA_OPERATOR_CONSENT_RECORDED=1
```

Guard validation

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-repeatability-runner.sh
```

Expected output:

```
fedora_vm_cli_payload_repeatability_runner: ok
```

Next recommended lane

```
Capture reviewed Fedora VM CLI payload repeatability transcript evidence
```

Non-claims

This status record is not a completed repeatability transcript, not RPM install evidence, not a second disposable Fedora VM validation run, not host mutation, not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, not update safety, not recovery safety, not sandboxing, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_REPEATABILITY_TRANSCRIPT_CAPTURE_TEMPLATE_STATUS.md

Source title: Fedora VM CLI Payload Repeatability Transcript Capture Template Status

Lines: 63 | Words: 200 | SHA-256: 3d8fed3845c490c9a4961e5cc7020bf37401ed6d1137b848aa16447ba7152e57

Fedora VM CLI Payload Repeatability Transcript Capture Template Status

Status: template/status alignment Date: 2026-05-26 Scope: status record for the Fedora VM CLI payload repeatability transcript capture template.

Summary

Latticra now has a no-effect capture template for a future Fedora VM CLI payload repeatability transcript.

The template prints the fields an operator must attach after a real disposable Fedora VM repeatability run.

It does not run the repeatability runner.

It does not mark repeatability evidence present.

Current classification

```
fedora_vm_cli_payload_repeatability_transcript_contract_present=1
fedora_vm_cli_payload_repeatability_runner_present=1
fedora_vm_cli_payload_repeatability_evidence_review_gate_present=1
fedora_vm_cli_payload_repeatability_transcript_capture_template_present=1
fedora_vm_cli_payload_repeatability_transcript_review_validator_present=1

daily_driver_install_ready=0
immutable_fedora_ready=0
```

Guard validation

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-repeatability-transcript-template.sh
```

Expected output:

```
fedora_vm_cli_payload_repeatability_transcript_template: ok
```

Next recommended lane

```
Run manual disposable Fedora VM CLI payload repeatability lane, validate the transcript
candidate, and then add reviewed evidence status
```

Non-claims

This status record is not repeatability evidence, not a completed transcript, not a second disposable Fedora VM validation run, not host mutation, not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, not update safety, not recovery safety, not sandboxing, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_REPEATABILITY_TRANSCRIPT_CONTRACT_STATUS.md

Source title: Fedora VM CLI Payload Repeatability Transcript Contract Status

Lines: 45 | Words: 136 | SHA-256: b9f144424e25f1f15ac51605bf3f48374b364c6222c61047ea484cbb52b6dadd

Fedora VM CLI Payload Repeatability Transcript Contract Status

Status: contract/status alignment Date: 2026-05-26 Scope: status record for the Fedora VM CLI payload repeatability transcript contract.

Summary

Latticra now has a contract for a future second disposable Fedora VM CLI payload validation transcript.

```
transcript_kind=disposable-vm-cli-payload-repeatability
fedora_vm_cli_payload_next_validation_lane_plan_present=1
fedora_vm_cli_payload_repeatability_transcript_contract_present=1
second_disposable_vm_cli_validation_completed=0
cli_payload_repeatability_evidence_present=0

immutable_fedora_ready=0
```

Guard validation

```
sh scripts/test-fedora-vm-cli-payload-repeatability-transcript-contract.sh
```

Expected output:

```
fedora_vm_cli_payload_repeatability_transcript_contract: ok
```

Next recommended lane

```
Add Fedora VM CLI payload repeatability runner plan
```

Non-claims

This status record is not a completed repeatability transcript, not a runner, not RPM install evidence, not a second disposable Fedora VM validation run, not host mutation, not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_REPEATABILITY_TRANSCRIPT_REVIEW_VALIDATOR_STATUS.md

Source title: Fedora VM CLI Payload Repeatability Transcript Review Validator Status

Lines: 62 | Words: 189 | SHA-256: e0222e7401a6b2d8da9adc345d626f102b22ca3a0da827152e4f50ff48763f88

Fedora VM CLI Payload Repeatability Transcript Review Validator Status

Status: validator/status alignment Date: 2026-05-26 Scope: status record for the Fedora VM CLI payload repeatability transcript review validator.

Summary

Latticra now has a no-effect validator for supplied Fedora VM CLI payload repeatability transcript candidates.

The validator checks required markers and rejects placeholder values.

It does not run the repeatability runner.

It does not write evidence status.

Current classification

```
fedora_vm_cli_payload_repeatability_transcript_contract_present=1
fedora_vm_cli_payload_repeatability_transcript_capture_template_present=1
fedora_vm_cli_payload_repeatability_evidence_review_gate_present=1

cli_payload_repeatability_evidence_present=0
host_install_ready_for_cli_payload=1
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Guard validation

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-repeatability-transcript-review-validator.sh
```

Expected output:

```
fedora_vm_cli_payload_repeatability_transcript_review_validator: ok
```

Next recommended lane

```
Run manual disposable Fedora VM CLI payload repeatability lane, validate the transcript
candidate, and then add reviewed evidence status
```

Non-claims

This status record is not repeatability evidence, not a completed transcript, not a second disposable Fedora VM validation run, not host mutation, not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, not update safety, not recovery safety, not sandboxing, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_VALIDATION_ANNOUNCEMENT_STATUS.md

Source title: Fedora VM CLI Payload Validation Announcement Status

Lines: 75 | Words: 188 | SHA-256: 938449b55e5a926fc1f268a69843848f25831d822c7842b173304da9b0a963d1

Fedora VM CLI Payload Validation Announcement Status

Status: announcement/status alignment Date: 2026-05-26 Scope: public announcement wording for the disposable Fedora VM CLI payload validation milestone.

Summary

The public announcement log now records the disposable Fedora VM CLI payload validation milestone.

The announcement is evidence-bound and limited to:

```
disposable_vm_cli_validation_completed=1
host_install_ready_for_cli_payload=1
validated_package=latticra-0.0.0-0.1.local.fc44.x86_64.rpm
validated_payload=/usr/bin/latticra
validated_payload=/usr/share/doc/latticra/README.md
evidence_level=9
```

Evidence basis

The announcement relies on:

```
docs/status/FEDORA_VM_CLI_PAYLOAD_VALIDATION_EVIDENCE_STATUS.md
docs/status/FEDORA_VM_CLI_PAYLOAD_README_ALIGNMENT_STATUS.md
README.md
```

Announcement boundary

The announcement must not claim:

```
production readiness
Fedora approval
Fedora distribution readiness
daily-driver safety
immutable Fedora readiness
security capability
update safety
recovery safety
sandboxing
malware prevention
ransomware prevention
bootable OS replacement behavior
kernel runtime readiness
production installer
```

Guard validation

This announcement alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-validation-announcement.sh
```

Expected output:

```
fedora_vm_cli_payload_validation_announcement: ok
```

Next recommended lane

```
Plan the next Fedora CLI payload validation lane without widening README or announcement claims
beyond disposable Fedora VM evidence
```

Non-claims

This status record is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, update safety, recovery safety, malware prevention, ransomware prevention, sandboxing, or a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_VALIDATION_EVIDENCE_STATUS.md

Source title: Fedora VM CLI Payload Validation Evidence Status

Lines: 177 | Words: 449 | SHA-256: 8e9e94987a603d2658c40601abb3bb564e0efa9e820d5b909ffff68ff9dbaa9a

Fedora VM CLI Payload Validation Evidence Status

Status: evidence status alignment Date: 2026-05-21 Scope: public status record after a disposable Fedora VM CLI payload validation transcript reached the expected validation report.

Summary

A disposable Fedora VM CLI payload validation run completed successfully against the manually gated runner from PR #236.

The validation run built the local Latticra RPM with the no-effect CLI payload, ran the build-time test suite, installed the package into the disposable Fedora VM, validated the installed CLI command surface, removed the package, verified post-removal absence, and emitted the expected deterministic validation report.

This is disposable Fedora VM CLI payload validation evidence.

It is not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, and not a production installer claim.

Evidence source

```
source=operator disposable Fedora VM transcript
repo_checkout=main
validated_package=latticra-0.0.0-0.1.local.fc44.x86_64.rpm
validated_package_name=latticra
validated_package_version=0.0.0
validated_package_arch=x86_64
fedora_kernel_version=6.19.10-300.fc44.x86_64
```

The transcript records the prerequisite guards and runner completion markers:

```
fedora_vm_cli_payload_validation_status_alignment: ok
fedora_vm_cli_payload_transcript_capture_docs: ok
latticra_no_effect_cli_status_surface: ok
state_lattice_invariants: ok
system_bootstrap: ok
kernel: ok
kernel_lifecycle: ok
Wrote: /tmp/.../rpmbuild/RPMS/x86_64/latticra-0.0.0-0.1.local.fc44.x86_64.rpm
Updating / installing...
latticra-0.0.0-0.1.local.fc44
fedora_vm_cli_payload_validation_lane: ok
```

Validation report recorded

production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Boundary statement

This evidence is limited to a disposable Fedora VM CLI payload validation path.

The validated payload is:

```
/usr/bin/latticra
/usr/share/doc/latticra/README.md
```

This evidence does not validate daily-driver installation, immutable Fedora installation, production host installation, service activation, boot integration, kernel module loading, SELinux policy changes, network operations, update safety, Fedora QA approval, Fedora distribution readiness, or production installer readiness.

Guard validation

The evidence status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-validation-evidence-status.sh
```

Expected output:

```
fedora_vm_cli_payload_validation_evidence_status: ok
```

Next recommended Fedora lane

```
Align README wording with disposable Fedora VM CLI payload validation evidence
```

That wording must remain narrow and should not claim production, Fedora distribution, immutable Fedora, daily-driver, security, recovery, or OS-replacement readiness.

Non-claims

This status record is not production readiness, not Fedora approval, not Fedora distribution readiness, not daily-driver safety, not immutable Fedora readiness, not update safety, not recovery safety, not malware prevention, not ransomware prevention, not sandboxing, not security hardening, and not a production installer claim.

docs/status/FEDORA_VM_CLI_PAYLOAD_VALIDATION_STATUS.md

Source title: Fedora VM CLI Payload Validation Status

Lines: 155 | Words: 425 | SHA-256: c98772e1e610ea8c0bc7b1edf95ac67a85ff6553ace81f5f76c11c1bdb083b42

Fedora VM CLI Payload Validation Status

Status: status alignment Date: 2026-05-21 Scope: public status record after the manually gated disposable Fedora VM CLI payload validation lane runner landed on main.

Summary

Latticra now has a manually gated disposable Fedora VM CLI payload validation runner.

The runner is designed for validating the expanded local RPM payload:

```
/usr/bin/latticra
/usr/share/doc/latticra/README.md
```

The lane defines and ships:

```
docs/FEDORA_VM_CLI_PAYLOAD_VALIDATION_LANE.md
scripts/run-fedora-vm-cli-payload-validation-lane.sh
scripts/test-fedora-vm-cli-payload-validation-lane-docs.sh
.github/workflows/fedora-vm-cli-payload-validation-lane-docs.yml
```

This is runner-readiness evidence only.

It does not prove that a disposable Fedora VM CLI payload validation run has completed yet.

The validation runner remains manually gated and must not be auto-run by normal CI.

Evidence recorded

```

evidence_level_9_achieved=0
```

Current readiness classification

```
fedora_vm_cli_transcript_contract_present=1
fedora_vm_cli_payload_validation_lane_present=1
fedora_vm_cli_payload_validation_runner_present=1
fedora_vm_cli_payload_validation_status=blocked-pending-real-vm-run
disposable_vm_cli_validation_transcript_present=0
disposable_vm_cli_validation_completed=0
host_install_ready_for_cli_payload=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Boundary statement

This status alignment does not run the validation lane.

It does not build a release RPM artifact.

It does not install or remove an RPM.

It does not validate /usr/bin/latticra in a real disposable Fedora VM.

It does not mutate a disposable VM, developer host, daily-driver Fedora host, immutable Fedora host, production host, boot entry, kernel module set, service registry, SELinux policy, firmware state, or network configuration.

The docs guard may run in CI.

The CLI payload validation runner must remain manual and gated by explicit disposable-VM evidence.

Guard validation

The validation lane documentation is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-validation-lane-docs.sh
```

This status alignment is guarded by:

```
sh scripts/test-fedora-vm-cli-payload-validation-status-alignment.sh
```

Expected output:

```
fedora_vm_cli_payload_validation_lane_docs: ok
fedora_vm_cli_payload_validation_status_alignment: ok
```

Next recommended Fedora lane

```
Capture real disposable Fedora VM CLI payload validation transcript evidence
```

That lane should record the Fedora VM identity, clean snapshot evidence, recovery path evidence, package version, RPM architecture, RPM payload listing, install transcript, CLI command transcript, invalid command transcript, removal transcript, post-removal absence proof, and emitted validation report.

README update hold

The root README should not claim CLI payload host install readiness yet.

The README update remains blocked until real validation evidence exists for:

```
disposable_vm_cli_validation_transcript_present=1
disposable_vm_cli_validation_completed=1
host_install_ready_for_cli_payload=1
```

Non-claims

This status record is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, update safety, recovery safety, sandboxing, security hardening, malware prevention, ransomware prevention, OS-replacement readiness, or a production installer claim.

Fedora VM RPM Validation Announcement Status

Status: announcement/status alignment Date: 2026-05-21 Scope: public announcement wording for the disposable Fedora VM local RPM validation milestone.

Summary

The public announcement log now records the disposable Fedora VM local RPM validation milestone.

The announcement is evidence-bound and limited to:

```
disposable_vm_validation_completed=1
live_host_validation_completed=1
host_install_ready=1
validated_package=latticra-0.0.0-0.1.local.fc44.noarch.rpm
validated_payload=/usr/share/doc/latticra/README.md
evidence_level=9
```

Evidence basis

The announcement relies on:

```
docs/status/FEDORA_DISPOSABLE_VM_LOCAL_RPM_VALIDATION_EVIDENCE_STATUS.md
docs/status/FEDORA_DISPOSABLE_VM_RPM_README_ALIGNMENT_STATUS.md
README.md
```

Announcement boundary

The announcement must not claim:

```
production readiness
Fedora approval
Fedora distribution readiness
daily-driver safety
immutable Fedora readiness
security capability
update safety
recovery safety
sandboxing
malware prevention
ransomware prevention
bootable OS replacement behavior
kernel runtime readiness
production installer
```

Guard validation

This announcement alignment is guarded by:

```
sh scripts/test-fedora-vm-rpm-validation-announcement.sh
```

Expected output:

```
fedora_vm_rpm_validation_announcement: ok
```

Next recommended lane

```
Plan the next Fedora validation lane without widening README or announcement claims beyond
disposable Fedora VM local RPM evidence
```

Non-claims

This status record is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, update safety, recovery safety, malware prevention, ransomware prevention, sandboxing, or a production installer claim.

docs/status/FREEBSD_ECOSYSTEM_INTEGRATION_STATUS.md

Source title: FreeBSD Ecosystem Integration Status

Lines: 152 | Words: 458 | SHA-256: 770ee8e86ad24f3368039ac96b168d4d2846b4bc4717a6ae5c853681ec686386

FreeBSD Ecosystem Integration Status

Status: FreeBSD integration status record Date: 2026-05-26

Summary

Latticra now has a FreeBSD-facing local ports metadata draft for the no-effect CLI payload.

This is an ecosystem integration checkpoint, not a production readiness claim.

l
```

Current Boundary

The FreeBSD lane does not publish a package, submit to the FreeBSD ports tree, claim Bugzilla PR evidence, claim committer review, claim poudriere success, claim portlint success, install an rc.d service, change the kernel, add a privileged helper, grant network authority, or claim production readiness.

The local ports metadata now records the no-effect package payload as AGPL-3.0-or-later plus CC-BY-4.0 while source archive, checksum, and notice obligations remain under review.

The source archive contract records the expected latticra-0.0.0.tar.gz distfile and distinfo boundary while keeping archive creation, checksum acceptance, distinfo, package artifacts, and build transcript promotion blocked.

The package-build gate is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_BUILD_GATE_CONTRACT.md. It keeps package_build_gate_state=closed-no-effect, freebsd_build_allowed=0, freebsd_make_stage_run=0, freebsd_make_package_run=0, freebsd_make_makesum_run=0, portlint_run=0, and poudriere_run=0 until source, checksum, license, notice, ports environment, operator authorization, payload inspection, install/remove transcript, and publication non-claim evidence exists.

The package-build environment contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_BUILD_ENVIRONMENT_CONTRACT.md. It documents the FreeBSD jail or VM ports environment requirement while keeping freebsd_build_environment_provisioned=0, explicit_operator_build_authorization=0, environment_transcript_present=0, and all FreeBSD package build commands disabled.

The package artifact naming contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_ARTIFACT_NAMING_CONTRACT.md. It records the future latticra-0.0.0.pkg artifact name while keeping freebsd_package_artifact_created=0, repository_package_artifact_write_allowed=0, and package_artifact_sha256_recorded=0.

The package payload inspection contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_PAYLOAD_INSPECTION_CONTRACT.md. It records the expected FreeBSD payload paths while keeping freebsd_payload_inspection_run=0, package_payload_accepted=0, and package_artifact_created=0.

The package install/remove transcript contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_INSTALL_REMOVE_TRANSCRIPT_CONTRACT.md. It records future disposable install/remove transcript requirements while keeping freebsd_package_install_run=0, freebsd_package_remove_run=0, and install_on_host_run=0.

The package publication non-claim review contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_PUBLICATION_NON_CLAIM_REVIEW_CONTRACT.md. It records local-only FreeBSD publication and official-port non-claims while keeping freebsd_package_publication_claimed=0, freebsd_pkg_repo_publish_run=0, and package validation promotion blocked.

The package validation promotion blocker matrix is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_VALIDATION_PROMOTION_BLOCKER_MATRIX_CONTRACT.md. It ties FreeBSD source, environment, artifact, payload, install/remove, and publication non-claim blockers together while keeping freebsd_platform_build_evidence_accepted=0 and freebsd_validation_result_promoted=0.

Next Recommended Lane

```
Add a FreeBSD package build-evidence intake denial contract before any FreeBSD build lane can
open.
```

Latticra High-Assurance Security Baseline Status

Status: status record for high-assurance security baseline Date: 2026-05-26

Scope

This record tracks the high-assurance security baseline checkpoint created after current NSA, CISA, FBI, and NIST source review.

It does not implement runtime execution, effect execution, host behavior, network behavior, cryptographic enforcement, signing authority, tool execution, shell execution, sandboxing, malware prevention, ransomware prevention, incident response, recovery behavior, certification, accreditation, compliance, production protection, or runtime authority.

Source title: Latticra Identity, Credential, and Access Management Baseline Status

Lines: 66 | Words: 142 | SHA-256: 45f038ec65754850fe776404645492a1050b766ab8f9fcc7c54d93590b33a7b0

Latticra Identity, Credential, and Access Management Baseline Status

Status: status record for identity, credential, and access management baseline Date: 2026-05-26

Scope

This record tracks the identity, credential, and access-management baseline for human identity, service identity, machine identity, privileged access, phishing-resistant MFA, SSO/federation context, account lifecycle, credential handling, break-glass access, identity event logging, and access-management non-claims.

It does not implement an identity provider, MFA provider, account provisioning, account deprovisioning, credential storage, remote access, privileged access, hosted administration, SSO federation, authorization enforcement, compliance, or runtime authority.

Current fields

```

docs/status/KERNEL_LIFECYCLE_EVIDENCE_STATUS.md

Source title: Kernel Lifecycle Evidence Status

Lines: 228 | Words: 530 | SHA-256: c0d76fb0c6fe2099910c7362ccb205c005a02d1c7b8a0473463f2a9651e5a325

Kernel Lifecycle Evidence Status

Status: status alignment record Date: 2026-05-26 00:45 CDT Scope: public status alignment after the merged kernel lifecycle evidence sequence.

Purpose

This record aligns the public status layer after the merged kernel lifecycle evidence PRs.

Merged slices:

```
PR #170 — kernel lifecycle report runner
PR #171 — kernel lifecycle subsystem summary
PR #172 — kernel lifecycle rollback plan
```

Current kernel evidence

The current kernel evidence now includes:

```
kernel lifecycle seed
kernel IPC table guard
kernel IPC table report runner
kernel VFS namespace guard
kernel VFS namespace report runner
kernel device registry guard
kernel device registry report runner
kernel driver catalog guard
kernel driver catalog report runner
kernel interrupt table guard
kernel interrupt table report runner
kernel timer source guard
kernel timer source report runner
kernel scheduler tick guard
kernel scheduler tick report runner
kernel run queue guard
kernel run queue report runner
kernel context switch guard
kernel context switch report runner
kernel time accounting guard
kernel time accounting report runner
kernel preemption guard
kernel preemption report runner
kernel scheduler credit guard
kernel scheduler credit report runner
kernel scheduler selection guard
kernel scheduler selection report runner
kernel scheduler dispatch guard
kernel scheduler dispatch report runner
kernel scheduler handoff guard
kernel scheduler handoff report runner
kernel scheduler activation guard
kernel scheduler activation report runner
kernel scheduler run-entry guard
kernel scheduler run-entry report runner
kernel process table guard
kernel process table report runner
kernel syscall table guard
kernel syscall table report runner
kernel lifecycle report runner
kernel lifecycle subsystem summary
kernel lifecycle rollback plan
```

The lifecycle evidence can report a bounded in-memory path ending at:

```
final_state=scheduler-run-entry-ready
```

The lifecycle report runner and subsystem summary keep the external-effect posture explicit:

```
external_effect_performed=0
no_external_effect_chain=1
```

Current authority posture

The merged evidence keeps authority denied:

```
runtime_entry_allowed=0
scheduler_execution_allowed=0
scheduler_selection_allowed=0
scheduler_dispatch_allowed=0
scheduler_handoff_allowed=0
scheduler_activation_allowed=0
scheduler_run_entry_allowed=0
memory_allocation_allowed=0
process_spawn_allowed=0
syscall_dispatch_allowed=0
ipc_send_allowed=0
ipc_receive_allowed=0
ipc_queue_mutation_allowed=0
filesystem_lookup_allowed=0
filesystem_read_allowed=0
filesystem_write_allowed=0
namespace_mutation_allowed=0
device_open_allowed=0
device_read_allowed=0
device_write_allowed=0
driver_probe_allowed=0
driver_load_allowed=0
driver_bind_allowed=0
interrupt_allowed=0
interrupt_mask_allowed=0
interrupt_unmask_allowed=0
interrupt_dispatch_allowed=0
interrupt_ack_allowed=0
timer_tick_allowed=0
timer_arm_allowed=0
timer_disarm_allowed=0
scheduler_tick_allowed=0
run_queue_mutation_allowed=0
enqueue_allowed=0
dequeue_allowed=0
dispatch_allowed=0
context_switch_allowed=0
register_save_allowed=0
register_restore_allowed=0
stack_switch_allowed=0
address_space_switch_allowed=0
preemption_allowed=0
time_accounting_allowed=0
time_read_allowed=0
cpu_usage_write_allowed=0
quota_update_allowed=0
scheduler_credit_update_allowed=0
process_wake_allowed=0
dma_allowed=0
hardware_effect_allowed=0
```

The subsystem summary also keeps process, filesystem, network, device, and production-boundary claims denied or report-only.

Rollback posture

The rollback plan is a planning and guardrail record only.

It defines future rollback classification terms such as:

```
last_safe_state
rollback_reason
rollback_required
rollback_performed=0
persistence_allowed=0
recovery_authority_allowed=0
runtime_entry_allowed=0
```

It does not implement rollback.

Status interpretation

This status alignment records a real improvement in kernel evidence visibility.

It does not change product-readiness claims.

Current non-claims remain:

```
not bootable
not an operating-system replacement
not a production security boundary
not a production runtime
not a hardware authority layer
not installer-ready
```

Next recommended work

Recommended next work:

```
Add no-effect runtime entry admission classifier
```

That future slice should implement classification/reporting only and continue to require:

```
external_effect_performed=0
persistence_allowed=0
recovery_authority_allowed=0
runtime_entry_allowed=0
```

Validation

This status alignment is guarded by:

```
sh scripts/test-kernel-lifecycle-status-alignment.sh
```

Dedicated workflow lanes keep the kernel table guards visible:

```
.github/workflows/kernel-ipc-table.yml
.github/workflows/kernel-vfs-namespace.yml
.github/workflows/kernel-device-registry.yml
.github/workflows/kernel-driver-catalog.yml
.github/workflows/kernel-interrupt-table.yml
.github/workflows/kernel-timer-source.yml
.github/workflows/kernel-scheduler-tick.yml
.github/workflows/kernel-run-queue.yml
.github/workflows/kernel-context-switch.yml
.github/workflows/kernel-time-accounting.yml
.github/workflows/kernel-preemption.yml
.github/workflows/kernel-scheduler-credit.yml
.github/workflows/kernel-scheduler-selection.yml
.github/workflows/kernel-scheduler-dispatch.yml
.github/workflows/kernel-scheduler-handoff.yml
.github/workflows/kernel-scheduler-activation.yml
.github/workflows/kernel-scheduler-run-entry.yml
.github/workflows/kernel-process-table.yml
.github/workflows/kernel-syscall-table.yml
```

Expected output:

```
kernel_lifecycle_status_alignment: ok
```

docs/status/L_UI_RENDERING_DETAILED_REPORT_REFINEMENT_STATUS.md

Source title: L-UI Rendering Detailed Report Refinement Status

Lines: 42 | Words: 114 | SHA-256: 41847e0c8317611dd2d7ce21cc4f19ac9755f1e525821e07d35d7aabb4dc4a7c

L-UI Rendering Detailed Report Refinement Status

Status: implementation refinement status

This record tracks the L-UI rendering detailed report refinement.

Primary record:

```
docs/L_UI_RENDERING_DETAILED_REPORT_REFINEMENT.md
```

Primary implementation surfaces:

```
include/latticra/l_ui_renderer.h
src/l_ui_renderer.c
tests/l_ui_rendering_detailed_report_refinement.c
scripts/test-l-ui-rendering-detailed-report-refinement.sh
.github/workflows/l-ui-rendering-detailed-report-refinement.yml
```

What changed:

```
explicit report classification metadata
explicit detail level metadata
explicit detailed-report availability flag
explicit detailed section count
explicit section sequence label
explicit no-effect-chain label
explicit evidence level label
```

Validation:

```
sh scripts/test-l-ui-rendering-detailed-report-refinement.sh
sh scripts/test-l-ui-rendering.sh
```

Boundary: no-effect rendering/report metadata only. No interactive UI, terminal control, command execution, Lat execution, LIR execution, Nucleus task execution, file I/O, network I/O, state mutation, server interaction, recovery behavior, hardware behavior, sandboxing, malware prevention, ransomware prevention, or operating-system completeness is added.

docs/status/L_UI_RENDERING_README_STATUS_ALIGNMENT.md

Source title: L-UI Rendering README/Status Alignment

Lines: 26 | Words: 65 | SHA-256: 2a3656a4e11e664bfaf8ed11c3358d839ceeef7e00b5706e35a23e6a5744eb59

L-UI Rendering README/Status Alignment

Status: README/status alignment

This record aligns public entry-point documentation after the L-UI rendering detailed report refinement.

Reviewed files:

```
README.md
STATUS.md
docs/status/README.md
docs/status/CURRENT_STATUS.md
docs/L_UI_RENDERING_DETAILED_REPORT_REFINEMENT.md
docs/status/L_UI_RENDERING_DETAILED_REPORT_REFINEMENT_STATUS.md
```

Resolution:

```
Add the L-UI detailed report refinement to README.md.
Add this alignment record to the status index.
Advance root and detailed status queues.
```

Boundary: documentation/status alignment only. No implementation behavior is changed.

docs/status/LANGUAGE_REPRESENTATION_REVIEW.md

Source title: Language Representation Review

Lines: 54 | Words: 152 | SHA-256: 649ea0a2f2b34055c65d3da374d997e4ce28a676c1a8750041e3a2112b394be6

Language Representation Review

Status: representation review

This record reviews the current Lat, LIR, and L-UI representation posture before any further Nucleus task execution refinement.

Reviewed representation surfaces:

```
docs/LAT_LANGUAGE_GRAMMAR_IMPLEMENTATION.md
docs/LAT_SEMANTIC_DIAGNOSTICS_REFINEMENT.md
docs/LAT_TO_LIR_LOWERING_IMPLEMENTATION.md
docs/LAT_PIPELINE_IMPLEMENTATION.md
docs/LAT_PIPELINE_REPORT_REFINEMENT.md
docs/LAT_PIPELINE_DIAGNOSTIC_INTEGRATION_REFINEMENT.md
docs/LAT_PIPELINE_DIAGNOSTIC_MAIN_TEST_INTEGRATION_AUDIT.md
docs/LAT_SPECIFIC_LIR_REFINEMENT_IMPLEMENTATION.md
docs/LIR_SHAPE_IMPLEMENTATION.md
docs/LIR_REPORT_REFINEMENT.md
docs/L_UI_RENDERING_IMPLEMENTATION.md
docs/L_UI_RENDERING_DETAILED_REPORT_REFINEMENT.md
```

Finding:

```
The language representation stack is stable enough for a bounded no-effect Nucleus
report/refinement slice.
```

Current representation boundary:

```
Lat remains parser/semantic/lowering metadata only.
LIR remains shape/report metadata only.
L-UI rendering remains presentation/report metadata only.
No Lat execution, LIR execution, command execution, runtime behavior, file I/O, network I/O,
mutation, recovery behavior, or hardware behavior exists.
```

Decision:

```
Permit the next Nucleus task execution refinement only as a no-effect report/refinement slice.
Do not permit effect-performing task execution.
Do not permit runtime behavior.
Do not permit command execution.
```

Recommended next slice:

```
Nucleus task execution no-effect report alignment
```

Boundary: representation/status review only. No implementation behavior is changed.

docs/status/LAT_PIPELINE_DIAGNOSTIC_INTEGRATION_STATUS.md

Source title: Lat Pipeline Diagnostic Integration Status

Lines: 67 | Words: 150 | SHA-256: 246b169d5ada094027cab8986217f998e20126f79e7538e4a915294448508bd3

Lat Pipeline Diagnostic Integration Status

Status: merged companion diagnostics surface

This record tracks the Lat pipeline diagnostic integration slice.

Merged PR:

```
#109 Add Lat pipeline diagnostic integration
```

Merged commit:

```
d2880fca57bb753753844b683c14882af5ec4560
```

Primary files:

```
include/latticra/lat_pipeline_diagnostics.h
include/latticra/lat_to_lir_diagnostics.h
src/lat_pipeline_diagnostics.c
src/lat_pipeline_diagnostics_eval.c
src/lat_pipeline_diagnostics_report.c
src/lat_to_lir_diagnostics.c
tests/lat_pipeline_diagnostic_integration_refinement.c
docs/LAT_PIPELINE_DIAGNOSTIC_INTEGRATION_REFINEMENT.md
scripts/test-lat-pipeline-diagnostic-integration-refinement.sh
.github/workflows/lat-pipeline-diagnostic-integration-refinement.yml
```

What it adds:

```
pipeline diagnostic class
pipeline error capture
failed pipeline stage capture
semantic diagnostic class capture
semantic error capture
semantic diagnostic count capture
first diagnostic declaration index
first diagnostic clause index
optional Lat-to-LIR lowering diagnostic class capture
lowering error capture
model error capture
LIR error capture
lowering model counts
lowering transition source index
pipeline_failed flag
semantic_failed flag
lowering_failed flag
model_failed flag
lir_failed flag
no_effect_issue flag
evidence_level
```

Validation:

```
sh scripts/test-lat-pipeline-diagnostic-integration-refinement.sh
sh scripts/test-lat-pipeline.sh
```

Boundary: diagnostic metadata only. No Lat execution, LIR execution, compiler, interpreter, runtime, state mutation, file I/O, network I/O, hardware behavior, or operating-system completeness is added.

docs/status/LAT_PIPELINE_DIAGNOSTIC_MAIN_TEST_AUDIT_STATUS.md

Source title: Lat Pipeline Diagnostic Main Test Audit Status

Lines: 45 | Words: 120 | SHA-256: c2344da1db019682473902936b3ad81104559fc0243914afeaa54c1e1e1e5e63

Lat Pipeline Diagnostic Main Test Audit Status

Status: merged audit guard

This record tracks the Lat pipeline diagnostic main test integration audit slice.

Merged PR:

```
#120 Add Lat pipeline diagnostic main test audit
```

Merged commit:

```
701a9f6ac8fc4891d8cae78b40ec763736b06045
```

Primary files:

```
docs/LAT_PIPELINE_DIAGNOSTIC_MAIN_TEST_INTEGRATION_AUDIT.md
scripts/test-lat-pipeline-diagnostic-main-test-integration-audit.sh
.github/workflows/lat-pipeline-diagnostic-main-test-audit.yml
```

What it verifies:

```
main Lat pipeline runner links src/lat_pipeline_diagnostics.c
main Lat pipeline runner links src/lat_pipeline_diagnostics_eval.c
main Lat pipeline runner links src/lat_pipeline_diagnostics_report.c
main Lat pipeline runner links src/lat_to_lir_diagnostics.c
main Lat pipeline runner compiles tests/lat_pipeline_diagnostic_integration_refinement.c
Lat Pipeline workflow runs scripts/test-lat-pipeline.sh
```

Validation:

```
sh scripts/test-lat-pipeline-diagnostic-main-test-integration-audit.sh
sh scripts/test-lat-pipeline.sh
```

Boundary: audit/status only. No Lat execution, LIR execution, compiler, interpreter, runtime behavior, state mutation, file I/O, network I/O, hardware behavior, or operating-system completeness is added.

docs/status/LATTICRA_CONSOLE_FOUNDATION_STATUS.md

Source title: Latticra Console Foundation Status

Lines: 164 | Words: 274 | SHA-256: f71d8fc5032c53144c9231240173c83f6c69d9fe426499625e0b41692611eece

Latticra Console Foundation Status

Status: active Stage-0 foundation Date: 2026-05-26 Scope: LC C report surface, standalone and Panel installability, local-prefix metadata, session contract, workspace contract, namespace contract, rootfs contract, packages contract, init contract, host-adapter contract, Seal receipt-request contract, receipt payload schema, receipt payload artifact draft, receipt payload artifact review gate, receipt payload artifact review receipt contract, receipt payload artifact review receipt draft contract, receipt payload materialization plan, signature-request binding contract, OS-base planning contract, VM evidence contract, and no-effect authority baseline.

runtime_enforcement_authority=0
boot_authority=0
production_os_claim=0
```

Verification

Run:

```
make latticra-console
```

The test compiles the LC C foundation, renders the LC report, checks key no-effect fields, and verifies Panel/install metadata references.

docs/status/LATTICRA_NO_EFFECT_CLI_RPM_SPEC_UPDATE_STATUS.md

Source title: Latticra No-Effect CLI RPM Spec Update Status

Latticra No-Effect CLI RPM Spec Update Status

Status: packaging/spec update status Date: 2026-05-21 Scope: status record for adding the no-effect CLI payload to the local Fedora RPM spec.

Summary

The local Fedora RPM spec now includes the no-effect latticra CLI payload.

The spec transition compiles the guarded C CLI source and installs it as the package binary payload.

This is a spec update only.

It is not a completed RPM build transcript.

It is not disposable Fedora VM validation of the expanded payload.

It is not host install readiness for the CLI payload.

Spec transition recorded

```
fedora_spec_updated_for_cli=1
rpm_payload_expansion_performed=1
rpm_contains_compiled_c_binary=1
buildarch_noarch_removed=1
cli_status_surface_guarded_before_packaging=1
cli_binary_compiled_in_build_section=1
cli_binary_installed_to_bindir=1
readme_installed_to_docdir=1
rpm_payload_validated=0
```

Current spec payload target

```
/usr/bin/latticra
/usr/share/doc/latticra/README.md
```

Required spec lines

```
sh scripts/test-latticra-no-effect-cli-status-surface.sh
cc %{optflags} -std=c99 -Wall -Wextra -Werror -pedantic src/latticra_cli.c -o build/latticra
install -m 0755 build/latticra %{buildroot}%{_bindir}/latticra
install -m 0644 README.md %{buildroot}%{_docdir}/%{name}/README.md
%{_bindir}/latticra
%doc %{_docdir}/%{name}/README.md
```

Forbidden surfaces still absent

```
/etc/latticra=absent
/usr/lib/systemd/system/latticra.service=absent
/usr/lib/modules=absent
/boot/latticra=absent
/usr/share/selinux=absent
systemctl=absent
rpm_scriptlets=absent
```

Historical evidence boundary

The previous successful disposable Fedora VM validation remains limited to the old documentation-only local RPM payload:

```
validated_package=latticra-0.0.0-0.1.local.fc44.noarch.rpm
validated_payload=/usr/share/doc/latticra/README.md
historical_disposable_vm_rpm_evidence_remains_limited=1
```

That evidence does not validate /usr/bin/latticra.

Current readiness classification

```
cli_payload_contract_present=1
cli_status_surface_implemented=1
cli_packaging_alignment_present=1
fedora_spec_updated_for_cli=1
rpm_payload_expansion_performed=1
rpm_build_transcript_present=0
rpm_payload_validated=0
disposable_vm_cli_validation_completed=0
host_install_ready_for_cli_payload=0
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Validation

```
sh scripts/test-latticra-no-effect-cli-rpm-spec-update-status.sh
```

Expected output:

```
latticra_no_effect_cli_rpm_spec_update_status: ok
```

Next recommended lane

```
Add disposable Fedora VM CLI payload validation transcript contract
```

That future lane should define the required transcript fields for validating the expanded payload inside a disposable Fedora VM.

Non-claims

This status record is not a completed RPM build transcript.

It is not RPM install evidence.

It is not disposable Fedora VM validation of the CLI payload.

It is not host install readiness for the CLI payload.

It is not production readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, runtime behavior, Lat execution, LIR execution, service management, kernel integration, SELinux policy integration, update safety, recovery safety, malware prevention, ransomware prevention, sandboxing, or a production installer claim.

docs/status/LATTICRA_PANEL_LOCAL_INSTALL_EVIDENCE_STATUS.md

Source title: Latticra Panel Local Install Evidence Status

Lines: 201 | Words: 566 | SHA-256: d785c9595eb5b09cc8a00ddd26819d9b7ea1e8a2725fb9c511646e52a1fa2461

Latticra Panel Local Install Evidence Status

Status: evidence status alignment Date: 2026-05-22 Scope: Fedora Workstation user-local Latticra Panel install verification after the merged Panel installer, README, CI, and self-copy fix work.

Summary

A Fedora Workstation user-local Latticra Panel install verification completed successfully.

The operator verified that the installed command wrappers resolve from ~/.local/bin, that the Latticra local prefix exists, that the installed payload tree exists, that receipts are present, that the desktop entry and desktop icon are present, that the Latticra Panel launcher is available, and that Latticra Seal can generate a report-only local report.

This is Fedora user-local Latticra Panel install evidence.

It is not production installer readiness, root installer readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, kernel integration, systemd integration, SELinux integration, network authority, runtime enforcement authority, or a production security-product claim.

Evidence source

```
source=operator Fedora Workstation transcript
host_os=Fedora Linux 44 (Workstation Edition)
kernel=Linux 7.0.9-205.fc44.x86_64 x86_64 GNU/Linux
repo_path=/home/ckbryan/Latticra
install_prefix=/home/ckbryan/.local/share/latticra
user_bin=/home/ckbryan/.local/bin
```

Command wrapper evidence

```
which_latticra=/home/ckbryan/.local/bin/latticra
which_lat=/home/ckbryan/.local/bin/lat
which_latticra_seal=/home/ckbryan/.local/bin/latticra-seal
which_latticra_panel=/home/ckbryan/.local/bin/latticra-panel
```

Installed status output

```
Latticra is installed.
prefix=/home/ckbryan/.local/share/latticra
payload=/home/ckbryan/.local/share/latticra/lib/latticra
receipts=/home/ckbryan/.local/share/latticra/share/latticra/receipts
```

Verification report recorded

```
ok: prefix -&gt; /home/ckbryan/.local/share/latticra
ok: payload tree -&gt; /home/ckbryan/.local/share/latticra/lib/latticra
ok: config -&gt; /home/ckbryan/.local/share/latticra/etc/latticra/installer-config.toml
ok: receipts -&gt; /home/ckbryan/.local/share/latticra/share/latticra/receipts
ok: latticra command -&gt; /home/ckbryan/.local/bin/latticra
ok: lat command -&gt; /home/ckbryan/.local/bin/lat
ok: latticra-seal command -&gt; /home/ckbryan/.local/bin/latticra-seal
ok: latticra-panel command -&gt; /home/ckbryan/.local/bin/latticra-panel
ok: desktop entry -&gt; /home/ckbryan/.local/share/applications/latticra-panel.desktop
ok: desktop icon -&gt; /home/ckbryan/.local/share/icons/hicolor/256x256/apps/latticra-panel.png
ok: latticra-seal report generated
ok: Latticra Panel launcher is available
Latticra local install verification: ok
```

Current updater policy alignment

The current verifier additionally requires the Panel-owned updater policy and non-launching updater status report:

```
ok: updater config
ok: updater policy
ok: updater status report
ok: updater status dry-run command
ok: updater status apply command
ok: updater status network fetch authority disabled
ok: updater status apply mode
```

The updater remains a guarded local-checkout Panel lane:

```
updater_panel_owned=1
updater_policy_present=1
updater_status_report_present=1
updater_preview_command=updater dry-run
updater_apply_command=updater apply
updater_apply_mode=guarded-local-prefix-reinstall
updater_network_fetch_authority=0
updater_root_authority=0
updater_system_mutation_authority=0
```

Seal report evidence

```
LATTICRA SEAL REPORT

timestamp_utc=20260522T172638Z
mode=report-only
prefix=/home/ckbryan/.local/share/latticra
kernel=Linux 7.0.9-205.fc44.x86_64 x86_64 GNU/Linux
os=Fedora Linux 44 (Workstation Edition)
network_authority=0
runtime_enforcement_authority=0
```

Installed component markers:

```
developer-cli-helpers.installed
docs-and-examples.installed
latticra-seal.installed
lat-tooling.installed
lir-contracts.installed
```

Current readiness classification

```
latticra_panel_installer_present=1
latticra_panel_user_local_install_verified=1
latticra_panel_command_wrapper_present=1
latticra_panel_desktop_entry_present=1
latticra_panel_desktop_icon_present=1
latticra_panel_launcher_available=1
latticra_local_prefix_present=1
latticra_payload_tree_present=1
latticra_receipts_present=1
latticra_seal_report_generated=1
updater_policy_present=1
updater_status_report_present=1
updater_network_fetch_authority=0
updater_apply_mode=guarded-local-prefix-reinstall
seal_report_only_mode=1
network_authority=0
runtime_enforcement_authority=0
root_authority=0
kernel_modification_performed=0
systemd_modification_performed=0
selinux_modification_performed=0
production_installer_ready=0
root_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Boundary statement

This evidence is limited to a Fedora Workstation user-local Latticra Panel installation path.

The verified install path is under:

```
/home/ckbryan/.local/share/latticra
/home/ckbryan/.local/bin
/home/ckbryan/.local/share/applications
/home/ckbryan/.local/share/icons
```

This evidence does not validate:

```
/usr/bin/latticra
/etc/latticra
/usr/lib/systemd/system/latticra.service
/usr/lib/modules
/boot/latticra
kernel modification
systemd modification
SELinux modification
network operation
runtime enforcement
production host installation
```

Guard validation

The evidence status alignment is guarded by:

```
sh scripts/test-latticra-panel-local-install-evidence-status.sh
```

Expected output:

```
latticra_panel_local_install_evidence_status: ok
```

Next recommended Latticra Panel lane

```
Add public README/status wording limited to Fedora user-local Latticra Panel installation
evidence
```

That wording must remain narrow and should not claim production installer readiness, root installation readiness, Fedora approval, Fedora distribution readiness, immutable Fedora readiness, daily-driver readiness, runtime enforcement, kernel integration, systemd integration, SELinux integration, or production security-product status.

Non-claims

This status record is not production installer readiness, root installer readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, update safety, rollback safety, malware prevention, ransomware prevention, sandboxing, runtime enforcement, kernel integration, systemd integration, SELinux integration, or a production security-product claim.

docs/status/LATTICRA_PANEL_LOCAL_INSTALL_PUBLIC_ENTRYPOINT_ALIGNMENT.md

Source title: Latticra Panel Local Install Public Entrypoint Alignment

Lines: 129 | Words: 395 | SHA-256: 60a6aceb5b800c716906d21d314d6b9f76ab8867653bb85d90bb7ee7272342e4

Latticra Panel Local Install Public Entrypoint Alignment

Status: public entrypoint alignment Date: 2026-05-22 Scope: public README/status alignment after the successful Fedora Workstation user-local Latticra Panel install evidence milestone.

Summary

The public Latticra entrypoint now has a safe Latticra Panel installer section, and the repository now has a dedicated evidence record for the successful Fedora Workstation user-local Panel verification.

This alignment records the narrow public meaning of that milestone:

```
latticra_panel_installer_present=1
latticra_panel_user_local_install_verified=1
latticra_panel_command_wrapper_present=1
latticra_panel_desktop_entry_present=1
latticra_panel_desktop_icon_present=1
latticra_panel_launcher_available=1
latticra_local_prefix_present=1
latticra_payload_tree_present=1
latticra_receipts_present=1
latticra_seal_report_generated=1
seal_report_only_mode=1
network_authority=0
runtime_enforcement_authority=0
root_authority=0
production_installer_ready=0
root_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

Public entrypoint wording

The root README identifies Latticra Panel as the graphical local installer and control panel for Latticra, Lat, LIR, and Latticra Seal.

It documents the guarded user-local install path:

```
make -C installer local-example
make -C installer verify-local
```

It also states the critical boundary:

```
This installer is user-local only. It does not use root, modify the kernel, modify systemd,
change SELinux, or use network authority.
```

That wording remains valid after the local-install evidence milestone.

Evidence record

The local-install evidence milestone is recorded in:

```
docs/status/LATTICRA_PANEL_LOCAL_INSTALL_EVIDENCE_STATUS.md
```

The recorded evidence includes:

```
which_latticra=/home/ckbryan/.local/bin/latticra
which_lat=/home/ckbryan/.local/bin/lat
which_latticra_seal=/home/ckbryan/.local/bin/latticra-seal
which_latticra_panel=/home/ckbryan/.local/bin/latticra-panel
Latticra local install verification: ok
ok: desktop entry -&gt; /home/ckbryan/.local/share/applications/latticra-panel.desktop
ok: desktop icon -&gt; /home/ckbryan/.local/share/icons/hicolor/256x256/apps/latticra-panel.png
ok: latticra-seal report generated
ok: Latticra Panel launcher is available
network_authority=0
runtime_enforcement_authority=0
```

Safe public claim

A careful public claim is:

```
Latticra Panel now has Fedora Workstation user-local install evidence covering command wrappers,
 local prefix layout, payload tree, receipts, desktop metadata, Panel launcher availability, and
 Latticra Seal report-only output.
```

That is intentionally limited.

Non-claims

This public entrypoint alignment does not mean Latticra Panel is a production installer, root installer, Fedora-approved package, Fedora distribution-ready package, daily-driver installer, immutable Fedora installer, runtime enforcement system, kernel integration layer, systemd integration layer, SELinux integration layer, malware prevention system, ransomware prevention system, sandbox, or production security product.

It does not validate:

```
/usr/bin/latticra
/etc/latticra
/usr/lib/systemd/system/latticra.service
/usr/lib/modules
/boot/latticra
kernel modification
systemd modification
SELinux modification
network operation
runtime enforcement
production host installation
```

Guard validation

This alignment is guarded by:

```
sh scripts/test-latticra-panel-local-install-public-entrypoint-alignment.sh
```

Expected output:

```
latticra_panel_local_install_public_entrypoint_alignment: ok
```

Next recommended Latticra Panel lane

```
Add status-index integration for Latticra Panel local-install evidence and public-entrypoint
alignment
```

That follow-up should preserve the same non-claims and should not expand the installer beyond the verified user-local evidence boundary.

docs/status/LATTICRA_PANEL_SIGNED_UPDATER_DELIVERY_GATE_STATUS.md

Source title: Latticra Panel Signed Updater Delivery Gate Status

Lines: 100 | Words: 281 | SHA-256: 44faf478e68675d7e5b66a76ec58ca448e0984a77c546714d73e83d35d5f3b13

Latticra Panel Signed Updater Delivery Gate Status

Status: no-effect signed updater delivery gate status Date: 2026-05-26 CDT Scope: status checkpoint after adding the closed signed updater delivery gate for Latticra Panel.

Summary

Latticra Panel now has a closed signed updater delivery gate.

The current updater remains a Panel-owned local-checkout reinstall lane. The signed delivery gate records the missing manifest, signature, artifact, rollback, validation, receipt, and operator-confirmation evidence that must exist before any future signed or network-delivered updater can open.

Status Fields

```
latticra_panel_signed_updater_delivery_gate_present=1
latticra_panel_signed_updater_delivery_gate_guard_present=1
latticra_panel_updater_present=1
latticra_panel_updater_owned=1
updater_current_source_strategy=current-source-checkout
updater_current_update_channel=local-checkout
updater_current_apply_mode=guarded-local-prefix-reinstall
signed_updater_delivery_gate_present=1

operator_confirmation_observed=0
update_receipt_required=1
update_receipt_written=0
staged_update_allowed=0
signed_update_apply_allowed=0
update_activation_allowed=0
host_mutation_allowed=0
host_mutation_performed=0
root_authority=0
system_mutation_authority=0
kernel_mutation_authority=0
systemd_mutation_authority=0
selinux_mutation_authority=0
boot_mutation_authority=0
production_update_ready=0
production_installer_ready=0
```

Public Meaning

The careful public meaning is:

```
Latticra Panel has a closed signed-updater delivery gate for future update delivery work.
```

That does not mean Latticra has signed update delivery, network self-update, a trusted remote update repository, artifact verification, rollback implementation, production update readiness, or production installer readiness.

Guard Validation

This status record is guarded by:

```
sh scripts/test-latticra-panel-signed-updater-delivery-gate.sh
```

Expected output:

```
latticra_panel_signed_updater_delivery_gate: ok
```

Next Recommended Lane

```
Add Panel signed-updater state transition denial disposition without enabling transition
execution or update apply.
```

Non-Claims

This status record is not signed update evidence, update-server evidence, network fetch evidence, trusted repository evidence, artifact-verification evidence, rollback evidence, production installer readiness, root installer readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, kernel integration, systemd integration, SELinux integration, runtime enforcement, malware prevention, ransomware prevention, sandboxing, or a production security-product claim.

```

Public Meaning

The careful public meaning is:

```
Latticra Panel records a no-effect denial transcript for its closed signed-updater delivery
gate.
```

That does not mean Latticra has signed update delivery, network self-update, a trusted remote update repository, artifact verification, rollback implementation, persistent denial records, production update readiness, or production installer readiness.

Guard Validation

This status record is guarded by:

```
sh scripts/test-latticra-panel-signed-updater-denial-transcript.sh
```

Expected output:

```
latticra_panel_signed_updater_denial_transcript: ok
```

Next Recommended Lane

```
Add Panel signed-updater state transition denial disposition without enabling transition
execution or update apply.
```

Non-Claims

This status record is not signed update evidence, network fetch evidence, update-server evidence, trusted repository evidence, artifact-verification evidence, rollback evidence, transcript persistence, production installer readiness, root installer readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, kernel integration, systemd integration, SELinux integration, runtime enforcement, malware prevention, ransomware prevention, sandboxing, or a production security-product claim.

Latticra Panel Signed Updater Manifest Fixture Contract Status

Status: local no-effect signed updater manifest fixture contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the local no-effect signed updater manifest fixture contract for Latticra Panel.

Summary

Latticra Panel now has a local signed-updater manifest fixture contract.

The fixture is reviewable manifest-shaped input for future validation work, but it is not a trusted signed manifest and does not open network fetch, artifact verification, staging, apply, receipt writes, or host mutation.

Latticra Panel Signed Updater State Fixture Contract Status

Status: local no-effect signed updater state fixture contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the local no-effect signed updater state fixture contract for Latticra Panel.

Summary

Latticra Panel now has a local signed-updater state fixture contract.

The fixture names the future updater states, but the current state remains blocked and no transition execution, staging, activation, rollback execution, receipt writes, or host mutation is enabled.

Latticra Panel Signed Updater State Transition Denial Review Status

Status: no-effect signed updater state transition denial review status Date: 2026-05-26 CDT Scope: status checkpoint after adding the stdout-only signed-updater state transition denial review for Latticra Panel.

Summary

Latticra Panel now has a no-effect review for the signed-updater state transition denial transcript.

The review upholds the blocked state transition, but it does not transition state, stage updates, activate updates, execute rollback, write receipts, write review files, or mutate host state.

```

Public Meaning

The careful public meaning is:

```
Latticra Panel records a no-effect signed updater state transition denial review.
```

That does not mean Latticra has state transition execution, signed update delivery, network self-update, a trusted remote update repository, verified artifacts, rollback implementation, production update readiness, or production installer readiness.

Guard Validation

This status record is guarded by:

```
sh scripts/test-latticra-panel-signed-updater-state-transition-denial-review.sh
```

Expected output:

```
latticra_panel_signed_updater_state_transition_denial_review: ok
```

Next Recommended Lane

```
Add Panel signed-updater state transition denial disposition without enabling transition
execution or update apply.
```

Non-Claims

This status record is not update-state evidence, state-transition execution, signed update evidence, network fetch evidence, update-server evidence, trusted repository evidence, artifact-verification evidence, rollback evidence, receipt evidence, production installer readiness, root installer readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, kernel integration, systemd integration, SELinux integration, runtime enforcement, malware prevention, ransomware prevention, sandboxing, or a production security-product claim.

docs/status/LATTICRA_PANEL_SIGNED_UPDATER_STATE_TRANSITION_DENIAL_TRANSCRIPT_STATUS.md

Source title: Latticra Panel Signed Updater State Transition Denial Transcript Status

Lines: 151 | Words: 342 | SHA-256: 7cbfc3a1685c1befddee6d51a789e5fc1d4bac441519b792dc87a99dcd6bb2d6

Latticra Panel Signed Updater State Transition Denial Transcript Status

Status: no-effect signed updater state transition denial transcript status Date: 2026-05-26 CDT Scope: status checkpoint after adding the stdout-only signed-updater state transition denial transcript for Latticra Panel.

Summary

Latticra Panel now has a no-effect transcript for the denied signed-updater state transition.

The transcript records the blocked state fixture posture and denial reason, but it does not transition state, stage updates, activate updates, execute rollback, write receipts, write transcript files, or mutate host state.

```

Expected output:

```
latticra_panel_signed_updater_state_transition_denial_transcript: ok
```

Next Recommended Lane

```
Add Panel signed-updater state transition denial disposition without enabling transition
execution or update apply.
```

Non-Claims

This status record is not update-state evidence, state-transition execution, signed update evidence, network fetch evidence, update-server evidence, trusted repository evidence, artifact-verification evidence, rollback evidence, receipt evidence, production installer readiness, root installer readiness, Fedora approval, Fedora distribution readiness, daily-driver safety, immutable Fedora readiness, kernel integration, systemd integration, SELinux integration, runtime enforcement, malware prevention, ransomware prevention, sandboxing, or a production security-product claim.

docs/status/LATTICRA_PANEL_UI_DESIGN_CHECKPOINT.md

Source title: Latticra Panel UI Design Checkpoint

Lines: 66 | Words: 172 | SHA-256: 2b710127ba1d1229476c50920e9b3e0a5cb5749719200011ca8c912885548c22

Latticra Panel UI Design Checkpoint

Status: design checkpoint Date: 2026-05-26 CDT

This checkpoint records the current Latticra Panel workbench layout as the baseline design state.

Future changes are allowed, but they should preserve the current workbench identity unless a deliberate design migration updates this file and the checker.

Checker:

```
scripts/check_latticra_panel_ui_design.py
```

CI workflow:

```
.github/workflows/latticra-panel-installer.yml
```

The checker currently protects these design anchors:

```
gui-workbench build identity
embedded panel image
texture loader
left navigation panel
right console panel
central workbench panel
dashboard tab
components tab
seal tab
authority tab
delivery tab
updater tab
evidence tab
procedure tab
fluid install button
right evidence panel
focused running monitor
bounded recent engine output
non-wrapping engine log scroll
running console quick-command restraint
window size
minimum window size
maximized launch
README console section
README safety section
```

Change rule:

1. keep the checker passing for ordinary UI edits;
2. update this file and the checker for deliberate design migrations;
3. keep installer CI passing before merge.

Current posture:

```
production_installer_ready=0
root_authority=0
network_authority=0
runtime_enforcement_authority=0
user_local_prefix_only=1
```

docs/status/LATTICRA_SEAL_FOUNDATION_STATUS.md

Source title: Latticra Seal Foundation Status

Lines: 67 | Words: 198 | SHA-256: d75b0df00bc6cbf1fe63b132a86b1059fbd68918cf591a9e9ac671a125da897d

Latticra Seal Foundation Status

Status: Latticra Seal foundation status record Date: 2026-05-21 Scope: status record for the first Latticra Seal contract and implementation plan.

Summary

Latticra Seal is now defined as the cryptographic evidence and capability substrate direction for Latticra.

This status record confirms that the first Seal slice is contract and implementation-plan work only.

Added foundation records

```
docs/LATTICRA_SEAL_CONTRACT.md
docs/LATTICRA_SEAL_IMPLEMENTATION_PLAN.md
```

Current Seal posture

```
seal_contract_present=1
seal_implementation_plan_present=1
seal_report_implementation_present=0
artifact_measurement_supported=0
signature_supported=0
capability_enforcement_supported=0
sealed_objects_supported=0
runtime_authority_granted=0
host_read_performed=0
host_mutation_performed=0
network_performed=0
status=contract-and-plan-only
```

Capability posture

This slice changes project direction and planning priority, but it does not add operational capability.

```
new_runtime_behavior=0
new_host_behavior=0
new_network_behavior=0
new_key_behavior=0
new_signature_behavior=0
new_encryption_behavior=0
new_capability_enforcement=0
```

First implementation target

The next valid implementation target is a no-effect Seal report surface.

That report must remain metadata-only and must not hash files, generate keys, sign records, encrypt objects, enforce capabilities, contact networks, mutate hosts, or grant runtime authority.

Boundary

Latticra Seal currently does not provide cryptographic enforcement, secure boot, measured boot, runtime authorization, key management, encrypted storage, encrypted transport, post-quantum security, TPM-backed identity, Linux integrity integration, Fedora approval, production hardening, or certification.

Validation

The foundation status is validated by:

```
sh scripts/test-latticra-seal-foundation.sh
```

docs/status/MACOS_APP_BUNDLE_WRITER_ALIGNMENT_STATUS.md

Source title: macOS App Bundle Writer Alignment Status

Lines: 82 | Words: 301 | SHA-256: 44be38686eb1257f4fd24e4c6d5a7069d80fe79ecfaf4c16f3e23e586986c072

macOS App Bundle Writer Alignment Status

Status: writer alignment status Date: 2026-05-25 CDT Scope: status checkpoint after aligning dry-run writer public meaning against future commit-capable writer claims.

Summary

Latticra now has a macOS app bundle writer alignment record.

The alignment makes the current capability explicit: a no-effect dry-run writer prototype exists, the macOS dry-run writer candidate integration can prove candidate inputs reach the no-effect future commit-gate decision, and the macOS commit gate contract keeps that gate closed. A commit-capable writer, app bundle install, reset/uninstall implementation, and install verification transcript do not exist.

Status Fields

```
macos_app_bundle_writer_alignment_present=1
macos_local_candidate_asset_probe_present=1
macos_dry_run_writer_candidate_integration_present=1

host_mutation_performed=0
network_performed=0
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS app bundle writer dry-run prototype that renders future writer
phases and blocks unsafe paths while keeping all writes disabled.
```

That does not mean Latticra has a commit-capable macOS installer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-app-bundle-writer-alignment.sh
```

Expected output:

```
macos_app_bundle_writer_alignment: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

docs/status/MACOS_APP_BUNDLE_WRITER_DRY_RUN_STATUS.md

Source title: macOS App Bundle Writer Dry-Run Status

Lines: 82 | Words: 323 | SHA-256: 472040d96499531ee6813ac6217e5a5f101e56123c912d10df9e941aa0ad5663

macOS App Bundle Writer Dry-Run Status

Status: no-effect writer dry-run status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS app bundle writer dry-run prototype.

Summary

Latticra now has a no-effect macOS app bundle writer dry-run prototype.

The prototype emits the planned writer phase report, validates unsafe paths, inspects existing target markers, reports missing executable/icon candidates, and keeps commit behavior disabled. It is now paired with the macOS dry-run writer candidate integration and closed macOS commit gate contract, which prove accepted local candidates can move the dry-run to ready-for-future-commit-gate without enabling writes. It does not create an app bundle, write Application Support files, install wrappers, mutate shell profiles, use launchd, access Keychain, request TCC permissions, use the network, or grant platform authority.

Status Fields

system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect dry-run prototype for the future managed user-local macOS app bundle
writer.
```

That does not mean Latticra has a commit-capable macOS installer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-app-bundle-writer-dry-run.sh
```

Expected output:

```
macos_app_bundle_writer_dry_run: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

docs/status/MACOS_BUILD_PLATFORM_PROBE_STATUS.md

Source title: macOS Build Platform Probe Status

Lines: 79 | Words: 272 | SHA-256: 0302f8fbf04ff8e20e3a5191ed5062a6c03df8c195586e61bb50ebddbfd26687

macOS Build Platform Probe Status

Status: no-effect probe status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS build/platform probe lane.

Summary

Latticra now has a no-effect macOS build/platform probe.

The probe records macOS host detection, architecture, sw_vers availability, clang availability, Rust/Cargo availability, Panel source readiness, C test source readiness, and denied-authority metadata. It does not build the Panel, compile C tests, create an app bundle, install wrappers, mutate host state, use the network, or grant platform authority.

Status Fields

```
macos_build_platform_probe_present=1

system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS platform/build-readiness probe for local toolchain and
source-readiness reporting.
```

That does not mean Latticra has a macOS installer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-build-platform-probe.sh
```

Expected output:

```
macos_build_platform_probe: ok
```

Next Recommended Lane

```
Add a macOS user-local app bundle implementation plan that remains no-effect and defines writer
phases, failure behavior, reset/uninstall sequencing, verification commands, and guard tests
before implementation.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

docs/status/MACOS_COMMIT_GATE_CONTRACT_STATUS.md

Source title: macOS Commit Gate Contract Status

Lines: 134 | Words: 343 | SHA-256: 522a2473b2d72d01b2fc8fd4cd11a61590a81462a9edf17f3b441de005e8dae3

macOS Commit Gate Contract Status

Status: no-effect commit gate contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the closed macOS commit gate contract.

Summary

Latticra now has a no-effect macOS commit gate contract.

The contract keeps commit_user_local_managed_artifacts=0 even when local candidates and the writer dry-run reach the future commit-gate decision. The macOS verification transcript contract and reset/uninstall dry-run contract are now present, but the gate still records the missing managed-write, reset/uninstall evidence, and transcript-evidence prerequisites before a commit-capable macOS user-local app bundle writer may exist.

```

Expected output:

```
macos_commit_gate_contract: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

docs/status/MACOS_DRY_RUN_PLAN_ADAPTER_STATUS.md

Source title: macOS Dry-Run Plan Adapter Status

Lines: 84 | Words: 282 | SHA-256: 492a746f8d53c92fdc1f952b8ff24018f5f6b946756193908d357b57a5be28ac

macOS Dry-Run Plan Adapter Status

Status: no-effect dry-run plan status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS dry-run plan adapter.

Summary

Latticra now has a no-effect macOS dry-run plan adapter.

The adapter renders user-local Application Support, app bundle, CLI wrapper, receipt, logs/caches, and verification intent for a future macOS installer lane. It does not write those artifacts, create an app bundle, install wrappers, mutate shell profiles, use launchd, access Keychain, request TCC permissions, use the network, or grant platform authority.

Status Fields

```

production_installer_ready=0
```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS dry-run plan adapter for rendering future user-local install
intent.
```

That does not mean Latticra has a macOS installer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-dry-run-plan-adapter.sh
```

Expected output:

```
macos_dry_run_plan_adapter: ok
```

Next Recommended Lane

```
Add a macOS user-local app bundle implementation plan that remains no-effect and defines writer
phases, failure behavior, reset/uninstall sequencing, verification commands, and guard tests
before implementation.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

docs/status/MACOS_DRY_RUN_WRITER_CANDIDATE_INTEGRATION_STATUS.md

Source title: macOS Dry-Run Writer Candidate Integration Status

Lines: 79 | Words: 295 | SHA-256: 7afe401a65622d1c8b228ae21c486159c73046f8b1d5f686b2c2a76905ccb856

macOS Dry-Run Writer Candidate Integration Status

Status: no-effect dry-run writer candidate integration status Date: 2026-05-25 CDT Scope: status checkpoint after bridging the macOS local candidate asset probe to the app bundle writer dry-run.

Summary

Latticra now has a no-effect macOS dry-run writer candidate integration.

The integration runs the local candidate asset probe and the app bundle writer dry-run with the same caller-supplied inputs. It reports readiness only when the probe accepts the inputs, the writer dry-run reaches ready-for-future-commit-gate, and all write and authority flags remain disabled.

Status Fields

```

keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Public Meaning

The careful public meaning is:

```
Latticra can prove, without writing anything, that accepted local executable/icon candidates can
 move the macOS writer dry-run to its future commit-gate decision.
```

That does not mean Latticra has a macOS installer, commit-capable app bundle writer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-dry-run-writer-candidate-integration.sh
```

Expected output:

```
macos_dry_run_writer_candidate_integration: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

docs/status/MACOS_INTEGRATION_TRANSFERABILITY_STATUS.md

Source title: macOS Integration Transferability Status

Lines: 577 | Words: 1190 | SHA-256: 33d1235e41b1e6b5edf33e5bfa936a12c63ba967e53f7c27f9fff010412a6ba1

macOS Integration Transferability Status

Status: transferability status record Date: 2026-05-25 CDT Scope: status checkpoint for the first macOS integration transferability map.

Summary

Latticra now has a dedicated macOS integration transferability plan.

The plan maps current Latticra surfaces into a cautious macOS lane: preserve no-effect reports, Panel-guided operator review, receipt-first installation, user-local artifacts, denied-by-default authority, and future-gated platform integrations.

This is planning/status work only. It does not implement macOS installation, app bundle creation, launchd behavior, Keychain behavior, Secure Enclave behavior, sandboxing, notarization, Endpoint Security behavior, System Extension behavior, Network Extension behavior, privileged helper behavior, or production macOS readiness.

Transferability Classification

The status checkpoint records these transferability conclusions:

```
Lat=high_transferability
LIR=high_transferability
L_UI=high_transferability
Nucleus=high_transferability
Runtime_Boundary=high_transferability
Latticra_Seal=high_transferability_report_only
Latticra_Panel=medium_high_transferability_with_app_bundle_adapter
Nadia_offline_AI=medium_high_transferability_contract_only
Fedora_RPM_lanes=not_transferable_keep_linux_specific
installer_scripts=medium_transferability_with_platform_adapter
documentation_status=high_transferability
```

Public Meaning

The careful public meaning is:

```
Latticra has a macOS transferability map for adapting the current no-effect, receipt-first,
user-local Panel and metadata surfaces into a future macOS lane.
```

That statement must not be expanded into a claim that Latticra already has a macOS installer, notarized app, sandbox, Keychain integration, endpoint security layer, system extension, package installer, or production security product.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-integration-transferability.sh
```

Expected output:

```
macos_integration_transferability: ok
```

Previous Recommended Lane

Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate, operator-intent, receipt, absence, planner, and classifier evidence before any live execution.

Next Recommended Lane

Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition closeout contract that closes the reviewed no-effect closeout audit review disposition without opening dispatch or deletion.

Current live-runner acceptance-gate lane:

Add a macOS reset/uninstall live-runner acceptance-gate contract that keeps the live runner closed until passed preflight, evidence, authorization, operator intent, and implementation are all present.

Current live-runner acceptance-denial transcript lane:

Add a macOS reset/uninstall live-runner acceptance-denial transcript contract that records the closed acceptance gate without dispatching effects.

Current live-runner acceptance-denial review lane:

Add a macOS reset/uninstall live-runner acceptance-denial review contract that reviews the closed gate transcript without enabling dispatch or deletion.

Current live-runner acceptance-denial disposition lane:

Add a macOS reset/uninstall live-runner acceptance-denial disposition contract that records the reviewed closed-gate denial as a no-effect disposition without opening dispatch.

Current live-runner acceptance-denial disposition closeout lane:

Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout contract that closes the reviewed no-effect disposition without opening dispatch or deletion.

Current live-runner acceptance-denial disposition closeout audit lane:

Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit contract that audits the no-effect closeout without opening dispatch or deletion.

Current live-runner acceptance-denial disposition closeout audit review lane:

Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review contract that reviews the no-effect closeout audit without opening dispatch or deletion.

Current live-runner acceptance-denial disposition closeout audit review disposition lane:

Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition contract that records the reviewed no-effect closeout audit as a no-effect disposition without opening dispatch or deletion.

Current live-runner acceptance-denial disposition closeout audit review disposition review lane:

Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition review contract that reviews the no-effect closeout audit review disposition without opening dispatch or deletion.

Current live-runner acceptance-denial disposition review lane:

Add a macOS reset/uninstall live-runner acceptance-denial disposition review contract that reviews the no-effect disposition without opening dispatch or deletion.

Current live-runner no-op prototype lane:

Add a macOS reset/uninstall live-runner no-op prototype contract that exercises the denied interface path without deleting files.

Current live-runner denied-dispatch transcript lane:

Add a macOS reset/uninstall live-runner denied-dispatch transcript contract that records the no-op runner denial without enabling deletion.

Current live-runner denied-dispatch review lane:

Add a macOS reset/uninstall live-runner denied-dispatch review contract that keeps review-only dispatch denial evidence separate from any effects.

Current completed lane:

> Add a macOS reset/uninstall live-implementation plan contract that maps future effect-authorized execution phases while deletion remains disabled.

Current preflight lane:

> Add a macOS reset/uninstall live-execution preflight contract that proves the live implementation plan still cannot delete until all evidence gates are satisfied.

Current live-denial transcript lane:

> Add a macOS reset/uninstall live-denial transcript contract that records the failed preflight decision without deleting files.

Current live-runner interface lane:

> Add a macOS reset/uninstall live-runner interface contract that accepts only a passed preflight and keeps deletion disabled otherwise.

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

docs/status/MACOS_LOCAL_CANDIDATE_ASSET_PROBE_STATUS.md

Source title: macOS Local Candidate Asset Probe Status

Lines: 85 | Words: 330 | SHA-256: b1b3eaaa325795b6568e572f9d6b07403c728b43189a3ce1e4fee75476274ca4

macOS Local Candidate Asset Probe Status

Status: no-effect local candidate asset probe status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS local Panel executable and icon candidate asset probe.

Summary

Latticra now has a no-effect macOS local candidate asset probe.

The probe checks caller-supplied local Panel executable and icon candidates for dry-run writer input readiness. It is now linked to the macOS dry-run writer candidate integration and closed macOS commit gate contract, which compare the probe decision with the writer dry-run decision while keeping all writes disabled. The probe reports missing files, disallowed paths, non-executable Panel candidates, unsupported icon formats, and ready dry-run inputs without building, downloading, signing, notarizing, copying, writing app bundle files, mutating the host, or granting authority.

privileged_helper_authority=0
runtime_authority_granted=0
production_installer_ready=0
```

Public Meaning

The careful public meaning is:

```
Latticra can report whether caller-supplied local Panel executable and icon candidates are
usable dry-run inputs.
```

That does not mean Latticra has a macOS installer, commit-capable app bundle writer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-local-candidate-asset-probe.sh
```

Expected output:

```
macos_local_candidate_asset_probe: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

docs/status/MACOS_README_INSTALLER_USAGE_STATUS.md

Source title: macOS README Installer Usage Status

Lines: 460 | Words: 672 | SHA-256: a6e202a3e41ff3e52544fdbeec1804dddb4fe1906730e4c3071d20dff322c832

macOS README Installer Usage Status

Status: README installer usage alignment status Date: 2026-05-25 CDT Scope: status checkpoint after documenting the macOS installer lane in the root README.

Summary

The root README now documents how to use the current macOS installer lane.

The README section targets macOS infrastructure directly: user-local Application Support, ~/Applications/Latticra Panel.app, Logs, Caches, Preferences, optional CLI wrappers, app-bundle shape, dry-run commands, local candidate checks, and the closed commit gate. It also states that no macOS app bundle is created, signed, notarized, verified, reset, or uninstalled yet.

Public Meaning

The careful public meaning is:

```
The README documents Latticra&#x27;s current no-effect macOS installer lane and the exact
Mac-specific infrastructure it targets.
```

That does not mean Latticra has a macOS installer, commit-capable app bundle writer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-readme-installer-usage.sh
```

Expected output:

```
macos_readme_installer_usage: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Source title: macOS Reset/Uninstall Absence-Report Contract Status

Lines: 163 | Words: 367 | SHA-256: a1980addd1a257cb60f75c228dca700a84642817df9b2f7d26e6a877d5de3046

macOS Reset/Uninstall Absence-Report Contract Status

Status: no-effect reset/uninstall absence-report contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall absence-report contract.

Summary

Latticra now has a no-effect macOS reset/uninstall absence-report contract.

The contract defines the required future evidence for post-removal managed-target absence, unmanaged-target preservation, receipt linkage, planner linkage, and authority-denial lines. It does not delete files, write reports, write receipts, mutate host state, or claim reset/uninstall implementation.

macOS Reset/Uninstall Dry-Run Contract Status

Status: no-effect reset/uninstall dry-run contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall dry-run contract.

Summary

Latticra now has a no-effect macOS reset/uninstall dry-run contract.

The contract defines managed-target removal order, managed-marker requirements, receipt placement outside the removed prefix, absence-report requirements, and preservation rules for user files. It does not remove files, write receipts, mutate host state, or claim reset/uninstall implementation.

macOS Reset/Uninstall Dry-Run Planner Status

Status: no-effect reset/uninstall dry-run planner status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall dry-run planner.

Summary

Latticra now has a no-effect macOS reset/uninstall dry-run planner.

The planner consumes the live-target classifier, records target states, and emits planned reset/uninstall actions for managed targets only. It does not delete files, write receipts, mutate host state, run absence verification, or claim reset/uninstall implementation.

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS reset/uninstall dry-run planner that can convert live target
classifications into planned managed-target actions.
```

That does not mean Latticra has a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-dry-run-planner.sh
```

Expected output:

```
macos_reset_uninstall_dry_run_planner: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

macOS Reset/Uninstall Effect-Authorization Contract Status

Status: no-effect reset/uninstall effect-authorization contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall effect-authorization contract.

Summary

Latticra now has a no-effect macOS reset/uninstall effect-authorization contract.

The contract keeps live reset/uninstall execution disabled until implementation-gate and operator-intent evidence are both present. It does not authorize effects, delete files, write receipts, write absence reports, mutate host state, or claim reset/uninstall implementation.

Public Meaning

The careful public meaning is:

> Latticra has a no-effect macOS reset/uninstall effect-authorization contract that keeps live reset/uninstall execution disabled until implementation-gate and operator-intent evidence are both present.

That does not mean Latticra has effect approval evidence, live approval evidence, a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-effect-authorization-contract.sh
```

Expected output:

```
macos_reset_uninstall_effect_authorization_contract: ok
```

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not live reset authorization, macOS reset evidence, macOS uninstall evidence, macOS install evidence, app bundle evidence, live approval evidence, operator approval evidence, effect approval evidence, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

macOS Reset/Uninstall Evidence-Bundle Contract Status

Status: no-effect reset/uninstall evidence-bundle contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall evidence-bundle contract.

Summary

Latticra now has a no-effect macOS reset/uninstall evidence-bundle contract.

The contract groups the implementation gate, operator intent, dry-run planner, live-target classifier, receipt schema, and absence-report requirements before any future live reset/uninstall execution. It keeps the bundle incomplete, leaves effect authorization closed, and does not delete files, write receipts, write absence reports, mutate host state, or claim reset/uninstall implementation.

macOS Reset/Uninstall Implementation-Gate Contract Status

Status: no-effect reset/uninstall implementation-gate contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall implementation-gate contract.

Summary

Latticra now has a no-effect macOS reset/uninstall implementation-gate contract.

The contract keeps live reset/uninstall activity closed until receipt, absence, planner, classifier, and explicit operator-intent evidence exist. It does not delete files, write receipts, write absence reports, mutate host state, or claim reset/uninstall implementation.

```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS reset/uninstall implementation-gate contract that keeps future
live reset/uninstall activity closed until required evidence exists.
```

That does not mean Latticra has a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-implementation-gate-contract.sh
```

Expected output:

```
macos_reset_uninstall_implementation_gate_contract: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, app bundle evidence, receipt evidence, absence verification evidence, operator approval evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

macOS Reset/Uninstall Live-Denial Transcript Contract Status

Status: no-effect reset/uninstall live-denial transcript contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-denial transcript contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-denial transcript contract.

The contract records the failed live-execution preflight decision to stdout only. It keeps deletion disabled, receipt writing disabled, absence-report writing disabled, host mutation disabled, network access absent, root authority absent, and runtime authority absent.

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS reset/uninstall live-denial transcript contract that records why
live deletion remains blocked.
```

That does not mean Latticra has live reset execution, live uninstall execution, complete evidence-bundle evidence, effect approval evidence, live approval evidence, a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-live-denial-transcript-contract.sh
```

Expected output:

```
macos_reset_uninstall_live_denial_transcript_contract: ok
```

Previous Recommended Lane

```
Add a macOS reset/uninstall live-denial transcript contract that records the failed preflight
decision without deleting files.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Follow-on no-op prototype lane:

```
Add a macOS reset/uninstall live-runner no-op prototype contract that exercises the denied
interface path without deleting files.
```

Non-Claims

This status record is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, live reset execution, live uninstall execution, complete evidence-bundle evidence, receipt evidence, absence verification evidence, operator approval evidence, effect approval evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Source title: macOS Reset/Uninstall Live-Execution Preflight Contract Status

Lines: 186 | Words: 483 | SHA-256: 88c86f9032d38b17f6c13b617e20864c915a1192219abd7c60c65a7abb487239

macOS Reset/Uninstall Live-Execution Preflight Contract Status

Status: no-effect reset/uninstall live-execution preflight contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-execution preflight contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-execution preflight contract.

The contract proves the live implementation plan still cannot delete because the complete evidence bundle, effect authorization, implementation gate, and operator intent are not satisfied. It keeps deletion disabled, receipt writing disabled, absence-report writing disabled, host mutation disabled, and runtime authority absent.

macOS Reset/Uninstall Live-Implementation Plan Contract Status

Status: no-effect reset/uninstall live-implementation plan contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-implementation plan contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-implementation plan contract.

The contract maps the future effect-authorized reset/uninstall phases while keeping the evidence bundle incomplete, effect authorization closed, deletion disabled, receipt writing disabled, absence-report writing disabled, host mutation disabled, and runtime authority absent.

```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS reset/uninstall live-implementation plan contract that maps
future effect-authorized phases while deletion remains disabled.
```

That does not mean Latticra has complete evidence-bundle evidence, effect approval evidence, live approval evidence, a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-live-implementation-plan-contract.sh
```

Expected output:

```
macos_reset_uninstall_live_implementation_plan_contract: ok
```

Previous Recommended Lane

```
Add a macOS reset/uninstall live-implementation plan contract that maps future effect-authorized
 execution phases while deletion remains disabled.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, complete evidence-bundle evidence, live execution evidence, receipt evidence, absence verification evidence, operator approval evidence, effect approval evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Contract Status

Status: no-effect reset/uninstall live-runner acceptance-denial disposition closeout audit contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-runner acceptance-denial disposition closeout audit contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-runner acceptance-denial disposition closeout audit contract. It audits the no-effect closeout and keeps dispatch, deletion, receipts, absence reports, host mutation, network access, root authority, runtime authority, audit review, and implementation claims disabled.

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Review Disposition Review Contract Status

Status: no-effect reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition review contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition review contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition review contract. It reviews the no-effect closeout audit review disposition and keeps dispatch, deletion, receipts, absence reports, host mutation, network access, root authority, runtime authority, closeout opening, and implementation claims disabled.

macOS Reset/Uninstall Live-Runner Acceptance-Denial Review Contract Status

Status: no-effect reset/uninstall live-runner acceptance-denial review contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-runner acceptance-denial review contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-runner acceptance-denial review contract. It reviews the closed acceptance-gate transcript and keeps dispatch, deletion, receipts, absence reports, host mutation, network access, root authority, runtime authority, and implementation claims disabled.

macOS Reset/Uninstall Live-Runner Denied-Dispatch Transcript Contract Status

Status: no-effect reset/uninstall live-runner denied-dispatch transcript contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-runner denied-dispatch transcript contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-runner denied-dispatch transcript contract. It records the no-op prototype denial while keeping dispatch, deletion, receipts, absence reports, host mutation, network access, root authority, and runtime authority disabled.

macOS Reset/Uninstall Live-Runner Interface Contract Status

Status: no-effect reset/uninstall live-runner interface contract status Date: 2026-05-26 CDT Scope: status checkpoint after adding the macOS reset/uninstall live-runner interface contract.

Summary

Latticra now has a no-effect macOS reset/uninstall live-runner interface contract.

The contract defines the future runner entrypoint shape and requires a passed live-execution preflight before dispatch. The current preflight is not passed, so dispatch, handoff, deletion, receipt writing, absence-report writing, host mutation, network access, root authority, and runtime authority remain disabled.

```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS reset/uninstall live-runner interface contract that rejects the
current failed preflight before any dispatch can occur.
```

That does not mean Latticra has live reset execution, live uninstall execution, complete evidence-bundle evidence, effect approval evidence, live approval evidence, a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-live-runner-interface-contract.sh
```

Expected output:

```
macos_reset_uninstall_live_runner_interface_contract: ok
```

Previous Recommended Lane

```
Add a macOS reset/uninstall live-runner interface contract that accepts only a passed preflight
and keeps deletion disabled otherwise.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, live reset execution, live uninstall execution, complete evidence-bundle evidence, receipt evidence, absence verification evidence, operator approval evidence, effect approval evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Source title: macOS Reset/Uninstall Live-Target Classifier Status

Lines: 128 | Words: 332 | SHA-256: c608052c7f1ab34646341b957d17c74da09fc69dd067725603d8b595ff0149f0

macOS Reset/Uninstall Live-Target Classifier Status

Status: no-effect reset/uninstall live-target classifier status Date: 2026-05-25 CDT Scope: status checkpoint after adding the read-only macOS reset/uninstall live-target classifier.

Summary

Latticra now has a no-effect macOS reset/uninstall live-target classifier.

The classifier inspects the guarded user-local macOS reset/uninstall targets and reports whether each target is absent, managed, or unmanaged-preserve. It does not delete files, write receipts, mutate host state, or claim reset/uninstall implementation.

```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect macOS reset/uninstall target classifier that can report absent,
managed, and unmanaged user-local targets.
```

That does not mean Latticra has a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-live-target-classifier.sh
```

Expected output:

```
macos_reset_uninstall_live_target_classifier: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Source title: macOS Reset/Uninstall Operator-Intent Contract Status

Lines: 206 | Words: 446 | SHA-256: c7a7ee1896c27fd8ed8e3ff83973885d491b4a6d37a71c2e9803025e7894ab57

macOS Reset/Uninstall Operator-Intent Contract Status

Status: no-effect reset/uninstall operator-intent contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall operator-intent contract.

Summary

Latticra now has a no-effect macOS reset/uninstall operator-intent contract.

The contract defines the explicit future approval evidence required before a live reset/uninstall could be considered. It does not prompt for approval, infer approval, delete files, write receipts, write absence reports, mutate host state, or claim reset/uninstall implementation.

Public Meaning

The careful public meaning is:

> Latticra has a no-effect macOS reset/uninstall operator-intent contract for future explicit live reset/uninstall approval evidence.

That does not mean Latticra has live approval evidence, a macOS reset implementation, uninstall implementation, installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-reset-uninstall-operator-intent-contract.sh
```

Expected output:

```
macos_reset_uninstall_operator_intent_contract: ok
```

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not operator approval evidence, macOS reset evidence, macOS uninstall evidence, macOS install evidence, app bundle evidence, live approval evidence, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Source title: macOS Reset/Uninstall Receipt-Schema Contract Status

Lines: 143 | Words: 355 | SHA-256: f6174d75e1db4479642566d60645e4f009ecb56e5fc00ed1cc4659d3ab5896c7

macOS Reset/Uninstall Receipt-Schema Contract Status

Status: no-effect reset/uninstall receipt-schema contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS reset/uninstall receipt-schema contract.

Summary

Latticra now has a no-effect macOS reset/uninstall receipt-schema contract.

The contract defines the future reset/uninstall receipt location, schema version, JSON format, digest binding, target-action fields, preserved-target fields, and authority-denial fields. It does not delete files, write receipts, write absence reports, mutate host state, or claim reset/uninstall implementation.

docs/status/MACOS_USER_LOCAL_APP_BUNDLE_CONTRACT_STATUS.md

Source title: macOS User-Local App Bundle Contract Status

Lines: 83 | Words: 300 | SHA-256: 5c04e96ec0d7aefc3bd6d15861d266920fec7c364689268c8f9ec10e600a1673

macOS User-Local App Bundle Contract Status

Status: app bundle contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS user-local app bundle contract.

Summary

Latticra now has a macOS user-local app bundle contract.

The contract defines exact future app bundle files, Info.plist requirements, Application Support files, CLI wrapper managed markers, receipt requirements, reset/uninstall behavior, and verification transcript requirements before any app bundle writer exists.

This is contract/status work only. It does not create an app bundle, install wrappers, write Application Support files, mutate shell profiles, use launchd, access Keychain, request TCC permissions, use Endpoint Security, use System Extensions, use Network Extensions, open the network, or grant platform authority.

Status Fields

```

```

Public Meaning

The careful public meaning is:

```
Latticra has a contract for a future managed user-local macOS app bundle lane.
```

That does not mean Latticra has a macOS installer, app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-user-local-app-bundle-contract.sh
```

Expected output:

```
macos_user_local_app_bundle_contract: ok
```

Next Recommended Lane

```
Add a no-effect macOS app bundle writer dry-run prototype that emits the planned phase report,
validates unsafe paths, and keeps commit_user_local_managed_artifacts=0.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

docs/status/MACOS_USER_LOCAL_APP_BUNDLE_IMPLEMENTATION_PLAN_STATUS.md

Source title: macOS User-Local App Bundle Implementation Plan Status

Lines: 82 | Words: 316 | SHA-256: 3de625203f13426c2a3c4330c893105395311f3eeb2ce51730588ff96c0f112b

macOS User-Local App Bundle Implementation Plan Status

Status: implementation plan status Date: 2026-05-25 CDT Scope: status checkpoint after adding the no-effect macOS user-local app bundle implementation plan.

Summary

Latticra now has a no-effect implementation plan for a future macOS user-local app bundle writer.

The plan defines writer phases, failure behavior, reset/uninstall sequencing, verification commands, and required future guard tests. It now records the macOS dry-run writer candidate integration as the no-effect bridge from local candidate inputs to the writer dry-run future commit-gate decision, and the macOS commit gate contract as the closed boundary before writes. It keeps the writer absent and records that no app bundle, wrapper, Application Support file, receipt, or verification transcript has been created.

Expected output:

```
macos_user_local_app_bundle_implementation_plan: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

docs/status/MACOS_VERIFICATION_TRANSCRIPT_CONTRACT_STATUS.md

Source title: macOS Verification Transcript Contract Status

Lines: 141 | Words: 337 | SHA-256: df39eb80aa8b0dca16f09db3b7edc641f59ed2c397cbbbe24fed21a300ae02a6

macOS Verification Transcript Contract Status

Status: no-effect verification transcript contract status Date: 2026-05-25 CDT Scope: status checkpoint after adding the macOS verification transcript contract.

Summary

Latticra now has a no-effect macOS verification transcript contract.

The contract defines the exact post-write evidence a future user-local app bundle writer must emit before any status can claim macos_install_verified=1. It does not write a transcript, verify an install, create an app bundle, mutate host state, or grant authority.

```

Public Meaning

The careful public meaning is:

```
Latticra has a no-effect contract for the future macOS user-local install verification
transcript.
```

That does not mean Latticra has a macOS installer, commit-capable app bundle writer, verified app bundle, signed build, notarized build, launchd integration, Keychain integration, Endpoint Security integration, System Extension integration, privileged helper, or production security capability.

Guard Validation

This status record is guarded by:

```
sh scripts/test-macos-verification-transcript-contract.sh
```

Expected output:

```
macos_verification_transcript_contract: ok
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Non-Claims

This status record is not macOS install evidence, app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Lines: 44 | Words: 95 | SHA-256: 409de03ef19271614ee9d352ace25a80378cdc9c9f9d56ea15af5fb23cda0525

Latticra Memory-Safety Roadmap Status

Status: status record for memory-safety roadmap Date: 2026-05-26

Scope

This record tracks the component-level memory-safety roadmap created from the current high-assurance security baseline.

It does not rewrite current code, certify memory safety, implement runtime execution, implement host behavior, implement network behavior, implement cryptographic enforcement, claim compliance, claim certification, claim production protection, or grant runtime

authority.

Current fields

```

```
memory_safety_roadmap: ok
```

docs/status/NADIA_AWARENESS_DIALOGUE_CONTRACT_STAGE_15_STATUS.md

Source title: Nadia Awareness Dialogue Contract Stage-15 Status

Lines: 111 | Words: 287 | SHA-256: 15211ed6d33d9227d7be07884dfa5252878bf2db1c84704d16b59c770bf505ba

Nadia Awareness Dialogue Contract Stage-15 Status

Status: implementation status record Date: 2026-05-25 Scope: future Q&A dialogue scope for Nadia Initiative awareness topics before prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-15 adds an awareness-dialogue contract generator.

The contract verifies Stage-14 prompt-materialization metadata and inherited protective, prompt, model, runtime, and tool-denial boundaries, then records an official-source-grounded topic register for future Q&A about Nadia Initiative awareness work. It remains contract-only and does not generate dialogue.

Evidence Flags

```
nadia_stage_15_awareness_dialogue_contract_present=1
nadia_awareness_dialogue_contract_generator_present=1
nadia_awareness_dialogue_contract_guard_present=1

tool_execution_performed=0
network_authority=0
```

Current Claim

Nadia can now produce an awareness-dialogue contract that defines a future Q&A scope for Nadia Initiative awareness topics.

This does not mean Nadia can generate dialogue, answer user prompts, browse the web, provide legal advice, provide medical advice, provide trauma counseling, receive prompt text, materialize prompt content, tokenize prompts, evaluate prompts, load model weights, spawn a runtime process, generate tokens, run inference, execute tools, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-awareness-dialogue-contract-stage-15.sh
```

Expected result:

```
nadia_awareness_dialogue_contract_stage_15: ok
```

Next Stage

Stage-16 now defines a prompt-evaluation handoff contract only after awareness-dialogue metadata, prompt-materialization metadata, prompt-receipt metadata, model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_CONTEXT_WINDOW_ASSEMBLY_CONTRACT_STAGE_27_STATUS.md

Source title: Nadia Context Window Assembly Contract Stage-27 Status

Lines: 109 | Words: 315 | SHA-256: 6cc57b70d9a86e23bf2e883b0c2ef1cbb1362bed3d7f80487669317d3edef4b1

Nadia Context Window Assembly Contract Stage-27 Status

Status: implementation status record

Scope: context-window assembly metadata before context window assembly, prompt evaluation input creation, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-27 adds a context-window assembly contract generator.

It consumes the Stage-26 prompt-token-sequence report as prerequisite evidence and records a future review lane for context-window layout, token budget, truncation, ordering, attention-mask policy, position-ID policy, and prompt-evaluation-input policy. It remains contract-only: no prompt text is read, no context window is assembled, no prompt evaluation input is created, no runtime is invoked, no prompt is evaluated, and no dialogue is generated.

Status Fields

```
nadia_stage_27_context_window_assembly_contract_present=1
nadia_context_window_assembly_contract_generator_present=1
context_window_assembly_contract_command=scripts/nadia-context-window-assembly-contract.sh

prompt_tokenized=0
runtime_invoked=0
runtime_session_created=0
prompt_evaluated=0
qa_dialogue_generated=0
sexual_request_refusal=always
manipulation_resistance=required
```

Stage-27 inherits all Nadia protective-safety and awareness-dialogue restrictions:

```
sexual_user_request_authority=0
sexual_content_generation=0
sexualized_dialogue_generation=0
graphic_sexual_detail_allowed=0
erotic_content_allowed=0
roleplay_allowed=0
survivor_impersonation_allowed=0
survivor_identifying_speculation_allowed=0
victim_blaming_allowed=0
genocide_denial_allowed=0
hate_or_collective_blame_allowed=0
sexual_request_refusal=always
manipulation_resistance=required
prompt_injection_override_authority=0
policy_bypass_authority=0
namesake_cause_awareness=1
```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose context-window-assembly as metadata-only. The command delegates to scripts/nadia-context-window-assembly-contract.sh after installation and writes reports under share/latticra/nadia/context-window-assembly/.

Next Boundary

Nadia can now produce a context-window assembly contract that packages Stage-26 prompt-token-sequence evidence and records review requirements for a future prompt-evaluation-input contract.

Prompt-evaluation input creation remains blocked until a later contract explicitly names the evaluation input format, context-window reference shape, runtime-denial fields, safety inheritance, operator review gates, and non-claims.

That later prompt evaluation input contract is the next boundary; Stage-27 only records the prerequisite metadata.

Stage-28 now defines a prompt-evaluation-input contract that keeps prompt evaluation input creation, runtime invocation, prompt evaluation, dialogue generation, token generation, and inference blocked.

Validation

```
sh scripts/test-nadia-context-window-assembly-contract-stage-27.sh
```

docs/status/NADIA_DEVELOPER_WORKBENCH_STAGE_3_STATUS.md

Source title: Nadia Developer Workbench Stage-3 Status

Lines: 59 | Words: 160 | SHA-256: 4603e6728b716b8f2cc7f8072d22f585339e8bad2774af20e1e7290e1483c784

Nadia Developer Workbench Stage-3 Status

Status: implementation status record Date: 2026-05-25 Scope: prompt-plan generation from local context-pack and runtime-profile evidence.

Summary

Nadia Stage-3 adds a developer-workbench prompt-plan generator.

The generator combines a Stage-1 context pack and Stage-2 runtime profile into an auditable plan for future offline inference. It does not evaluate prompts.

Evidence Flags

```
nadia_stage_3_developer_workbench_present=1
nadia_prompt_plan_generator_present=1
nadia_prompt_plan_guard_present=1
nadia_installed_prompt_plan_command_planned=1
prompt_plan_command=scripts/nadia-prompt-plan.sh
installed_prompt_plan_command=latticra-nadia prompt-plan
requires_context_pack=1
requires_runtime_profile=1
context_pack_measured=1
runtime_profile_measured=1
network_authority=0
model_runtime_invoked=0
inference_performed=0
prompt_evaluated=0
tool_execution_authority=0
source_mutation_authority=0
training_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now generate a local prompt plan from local context-pack and runtime-profile evidence.

This does not mean Nadia can evaluate a prompt, run a model, install weights, generate code, execute arbitrary tools, train herself, mutate source, or use network access.

Validation

```
sh scripts/test-nadia-developer-workbench-stage-3.sh
```

Expected result:

```
nadia_developer_workbench_stage_3: ok
```

Next Stage

Stage-4 now adds systems-engineering mode taxonomies and validators for planning surfaces before any prompt evaluation or generation path is added.

docs/status/NADIA_GUARDED_TOOL_AUTHORITY_STAGE_7_STATUS.md

Source title: Nadia Guarded Tool Authority Stage-7 Status

Lines: 76 | Words: 194 | SHA-256: 7c046da5750189455a4a80126663b336f13201acb50c55150f4677a944ff36bb

Nadia Guarded Tool Authority Stage-7 Status

Status: implementation status record Date: 2026-05-25 Scope: report-only tool-authority preflight after protective-safety validation.

Summary

Nadia Stage-7 adds a guarded tool-authority preflight.

The preflight verifies a Stage-6 protective-safety report, rejects unsupported or dangerous tool classes, and records tool-boundary requirements. It remains report-only and does not execute tools.

Evidence Flags

```
nadia_stage_7_guarded_tool_authority_present=1
nadia_tool_authority_preflight_present=1
nadia_tool_authority_guard_present=1
nadia_installed_tool_authority_preflight_command_planned=1
tool_authority_preflight_command=scripts/nadia-tool-authority-preflight.sh
installed_tool_authority_preflight_command=latticra-nadia tool-preflight
requires_protective_safety=1
protective_safety_stage_required=6-protective-safety-boundary
tool_authority_stage=preflight-only
preflight_decision=report_only_no_execution
tool_execution_authority=0
tool_execution_performed=0
tool_selection_authority=0

network_tool_authority=0
source_mutation_authority=0
destructive_action_authority=0
credential_access_authority=0
requires_operator_approval=1
requires_nucleus_gate=1
requires_runtime_boundary_gate=1
requires_seal_receipt=1
requires_protective_safety_boundary=1
authority_transition_allowed=0
sexual_content_generation=0
sexual_request_refusal=always
manipulation_resistance=required
network_authority=0
model_runtime_invoked=0
inference_performed=0
prompt_evaluated=0
model_weights_installed=0
training_performed=0
distillation_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now produce a report-only preflight for proposed tool classes after protective-safety validation.

This does not mean Nadia can execute tools, use a shell, use a network client, mutate source, read credentials, run a model, evaluate a prompt, install weights, download models, generate code autonomously, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-guarded-tool-authority-stage-7.sh
```

Expected result:

```
nadia_guarded_tool_authority_stage_7: ok
```

Next Stage

Stage-8 now defines prompt-evaluation contracts after the tool preflight, protective-safety boundary, runtime-profile boundary, and local context evidence are all present and explicitly non-executing.

docs/status/NADIA_INFERENCE_READINESS_CONTRACT_STAGE_10_STATUS.md

Source title: Nadia Inference Readiness Contract Stage-10 Status

Lines: 95 | Words: 227 | SHA-256: 244a6a2a90f7f805a22b1e345634fb0551a90f63b08f3d692705db095a8af2da

Nadia Inference Readiness Contract Stage-10 Status

Status: implementation status record Date: 2026-05-25 Scope: inference-readiness metadata before runtime invocation, model loading, prompt evaluation, inference, or tool execution.

Summary

Nadia Stage-10 adds an inference-readiness contract generator.

The contract verifies Stage-9 model-registry metadata and inherited protective, prompt, runtime, and tool-denial boundaries, then records an explicitly blocked readiness decision for future operator review. It remains contract-only and does not invoke a runtime.

Evidence Flags

```
nadia_stage_10_inference_readiness_contract_present=1
nadia_inference_readiness_contract_generator_present=1
nadia_inference_readiness_contract_guard_present=1

sexual_request_refusal=always
manipulation_resistance=required
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now produce an inference-readiness contract after local model-registry evidence is present.

This does not mean Nadia can load model weights, invoke a runtime, run inference, materialize prompts, evaluate prompts, execute tools, use a shell, use a network client, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-inference-readiness-contract-stage-10.sh
```

Expected result:

```
nadia_inference_readiness_contract_stage_10: ok
```

Next Stage

Stage-11 now defines a runtime-invocation contract after inference-readiness metadata, model-registry metadata, prompt-evaluation contracts, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_LOCAL_CONTEXT_ENGINE_STAGE_1_STATUS.md

Source title: Nadia Local Context Engine Stage-1 Status

Lines: 56 | Words: 164 | SHA-256: ce875357d91574f1bf81d4d17f05820e91d0a02fa42ad2adabf92faebe5118e7

Nadia Local Context Engine Stage-1 Status

Status: implementation status record Date: 2026-05-25 Scope: no-network local context-pack generation for Nadia.

Summary

Nadia Stage-1 adds a local context engine that can generate auditable context packs from Latticra repository material.

This is still not model inference. The generated pack is local inventory and measurement evidence for future offline AI work.

Evidence Flags

```
nadia_stage_1_local_context_engine_present=1
nadia_context_pack_generator_present=1
nadia_context_pack_guard_present=1
nadia_installed_context_pack_command_planned=1
context_pack_command=scripts/nadia-context-pack.sh
installed_context_pack_command=latticra-nadia context-pack
local_file_read_for_indexing=operator_invoked
local_context_pack_write=operator_selected_output
network_authority=0
model_runtime_present=0
model_weights_installed=0
tool_execution_authority=0
source_mutation_authority=0
training_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now generate a no-network local context pack for Latticra source, docs, tests, scripts, installer metadata, and Seal material.

This does not mean Nadia can answer questions, generate code, run a model, embed files, execute arbitrary tools, train herself, mutate source, or use network access.

Validation

```
sh scripts/test-nadia-local-context-engine-stage-1.sh
```

Expected result:

```
nadia_local_context_engine_stage_1: ok
```

Next Stage

Stage-2 now defines an offline runtime-profile boundary before any prompt execution or local generation path is added.

docs/status/NADIA_LOCAL_MODEL_REGISTRY_CONTRACT_STAGE_9_STATUS.md

Source title: Nadia Local Model Registry Contract Stage-9 Status

Lines: 93 | Words: 242 | SHA-256: 1d5a9289de672b25dd7084629e534a95d9fbcf7b5eed62ee1cf18c1e6880e735

Nadia Local Model Registry Contract Stage-9 Status

Status: implementation status record Date: 2026-05-25 Scope: local model-registry metadata before model selection, model installation, prompt evaluation, inference, or tool execution.

Summary

Nadia Stage-9 adds a local model-registry contract generator.

The contract verifies Stage-8 prompt-evaluation contract evidence and Stage-2 runtime-profile metadata, then records a local model candidate for operator review. It remains metadata-only and does not select, install, load, inspect, benchmark, or run a model.

Evidence Flags

```
nadia_stage_9_local_model_registry_contract_present=1
nadia_model_registry_contract_generator_present=1

community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now produce a local model-registry contract after prompt-contract and runtime-profile evidence are present.

This does not mean Nadia can select models, install model weights, copy model weights, load model weights, inspect model weights, benchmark models, run inference, materialize prompts, evaluate prompts, execute tools, use a shell, use a network client, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-local-model-registry-contract-stage-9.sh
```

Expected result:

```
nadia_local_model_registry_contract_stage_9: ok
```

Next Stage

Stage-10 now defines an inference-readiness contract after local model-registry metadata, prompt-evaluation contracts, protective-safety refusal behavior, runtime-profile metadata, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_MODEL_LOAD_CONTRACT_STAGE_12_STATUS.md

Source title: Nadia Model Load Contract Stage-12 Status

Lines: 109 | Words: 279 | SHA-256: 31628f061b700e285234cf285ebfade5b44e8316029fc1dfc555da43122f8edb

Nadia Model Load Contract Stage-12 Status

Status: implementation status record Date: 2026-05-25 Scope: model-load metadata before model file opening, weight mapping, weight verification, weight loading, runtime attachment, token generation, inference, prompt evaluation, or tool execution.

Summary

Nadia Stage-12 adds a model-load contract generator.

The contract verifies Stage-11 runtime-invocation metadata and inherited protective, prompt, model, runtime, and tool-denial boundaries, then records an explicitly blocked load decision for future operator review. It remains contract-only and does not open, map, verify, or load model weights.

Evidence Flags

```
nadia_stage_12_model_load_contract_present=1
nadia_model_load_contract_generator_present=1
nadia_model_load_contract_guard_present=1

sexual_request_refusal=always
manipulation_resistance=required
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now produce a model-load contract after runtime-invocation evidence is present.

This does not mean Nadia can open model files, map model weights, verify model weights, load model weights, attach weights to a runtime, spawn a runtime process, create a model session, generate tokens, run inference, materialize prompts, evaluate prompts, execute tools, use a shell, use a network client, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-model-load-contract-stage-12.sh
```

Expected result:

```
nadia_model_load_contract_stage_12: ok
```

Next Stage

Stage-13 now defines a prompt-receipt contract after model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, prompt-evaluation contracts, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_OFFLINE_AI_STAGE_0_STATUS.md

Source title: Nadia Offline AI Stage-0 Status

Lines: 73 | Words: 229 | SHA-256: ef2557a75112d341e8543fa0423108ac63626c6c9c72f0a67c5bd98a897753e9

Nadia Offline AI Stage-0 Status

Status: foundation status record Date: 2026-05-25 Scope: Stage-0 foundation for the Latticra-native offline AI named Nadia.

Summary

Nadia is the selected name for Latticra's future offline AI companion.

The name honors Nobel Peace Prize laureate Nadia Murad and anchors the system's future capability in human dignity, survivor-witness respect, community awareness, and harm-aware development.

Stage-0 creates the bounded foundation only: component identity, Panel install metadata, embedded Console status metadata, local install paths, CLI shim planning, local configuration, and a deterministic guard.

Evidence Flags

```
nadia_name_selected=1
nadia_namesake=Nadia Murad
nadia_system_name=Latticra Nadia Witness Foundation
public_name=Nadia
interactive_name=Nadia
implementation_name=Nadia Witness Foundation
documentation_code_name=Nadia Witness Foundation
nadia_command_name=latticra-nadia
nadia_component_key=nadia_offline_ai
nadia_stage_0_foundation_present=1
nadia_foundation_contract_present=1
nadia_status_record_present=1
nadia_panel_component_present=1
nadia_console_status_surface_present=1
nadia_installer_manifest_present=1
nadia_installer_config_surface_present=1
nadia_cli_shim_planned=1
nadia_local_config_planned=1
nadia_productivity_ledger_reserved=1
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
offline_by_default=1
network_authority=0
root_authority=0
runtime_enforcement_authority=0
tool_execution_authority=0
model_runtime_present=0
model_weights_installed=0
weight_training=0
self_modification_authority=0
production_ai_claimed=0
```

Current Claim

Nadia now has a Stage-0 Latticra-native offline AI foundation. She is visible as an optional Panel-installable component and as a metadata-only Console/CLI status surface.

This does not mean Nadia can run a model, generate code, execute tools, train herself, mutate the repository, use network access, or provide production AI capability.

Validation

```
sh scripts/test-nadia-offline-ai-stage-0.sh
```

Expected result:

```
nadia_offline_ai_stage_0: ok
```

Next Stage

Stage-1 should add a no-network local context engine that indexes Latticra docs, source, headers, tests, scripts, installer metadata, and status records into auditable context packs without running inference.

docs/status/NADIA_PRODUCTIVITY_LOOP_STAGE_5_STATUS.md

Source title: Nadia Productivity Loop Stage-5 Status

Lines: 62 | Words: 173 | SHA-256: c9ab88c8c60306d54cbb8f4b78cbb7cf7dc82f6aa8df39f8cb25003b68e59eca

Nadia Productivity Loop Stage-5 Status

Status: implementation status record Date: 2026-05-25 Scope: operator-reviewed local productivity ledger before training, inference, or tool authority.

Summary

Nadia Stage-5 adds a productivity-ledger generator for local, operator-reviewed learning evidence.

The ledger records mode-validation evidence, outcome labels, recommendation labels, and metadata hints for future retrieval ranking, plan templates, test recommendations, and project memory. It remains metadata-only and does not train or distill a model.

Evidence Flags

```
nadia_stage_5_productivity_loop_present=1
nadia_productivity_ledger_generator_present=1
nadia_productivity_ledger_guard_present=1
nadia_installed_productivity_ledger_command_planned=1
productivity_ledger_command=scripts/nadia-productivity-ledger.sh
installed_productivity_ledger_command=latticra-nadia productivity-ledger
requires_mode_validation=1
mode_validation_stage_required=4-systems-engineering-mode-validation
learning_scope=operator-reviewed-local-productivity
ledger_append_only=1
project_memory_scope=local-metadata-only
network_authority=0
model_runtime_invoked=0
inference_performed=0
prompt_evaluated=0
model_weights_installed=0
tool_execution_authority=0
source_mutation_authority=0
training_performed=0
distillation_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now write local productivity-ledger entries from validated planning evidence.

This does not mean Nadia can run a model, evaluate a prompt, install weights, download models, generate code, execute arbitrary tools, train herself, distill herself, mutate source, or use network access.

Validation

```
sh scripts/test-nadia-productivity-loop-stage-5.sh
```

Expected result:

```
nadia_productivity_loop_stage_5: ok
```

Next Stage

Stage-6 now adds a protective-safety boundary before any guarded tool authority is considered.

docs/status/NADIA_PROMPT_EVALUATION_CONTRACT_STAGE_8_STATUS.md

Source title: Nadia Prompt Evaluation Contract Stage-8 Status

Lines: 75 | Words: 195 | SHA-256: 95ad9b37c2c4cf3d09861056dfc403cef9d2f92ded84d45be9c25359d7801039

Nadia Prompt Evaluation Contract Stage-8 Status

Status: implementation status record Date: 2026-05-25 Scope: prompt-evaluation contract before prompt materialization, prompt evaluation, inference, or tool execution.

Summary

Nadia Stage-8 adds a prompt-evaluation contract generator.

The contract verifies Stage-7 report-only tool preflight evidence and protective-safety restrictions, then records the fields required for any future prompt-evaluation path. It remains contract-only and does not evaluate prompts.

Evidence Flags

```
nadia_stage_8_prompt_evaluation_contract_present=1
nadia_prompt_evaluation_contract_generator_present=1
nadia_prompt_evaluation_contract_guard_present=1
nadia_installed_prompt_evaluation_contract_command_planned=1
prompt_evaluation_contract_command=scripts/nadia-prompt-evaluation-contract.sh
installed_prompt_evaluation_contract_command=latticra-nadia prompt-contract
requires_tool_preflight=1
tool_preflight_stage_required=7-guarded-tool-authority-preflight
prompt_evaluation_stage=contract-only
prompt_contract_status=contract_only

prompt_text_materialized=0
prompt_evaluation_authority=0
prompt_evaluated=0
prompt_receipt_required=1
refusal_policy_required=1
protective_safety_required=1
tool_preflight_required=1
runtime_profile_required=1
model_registry_review_required=1
operator_review_required=1
contract_promotion_allowed=0
sexual_content_generation=0
sexual_request_refusal=always
manipulation_resistance=required
tool_execution_authority=0
tool_execution_performed=0
source_mutation_authority=0
model_runtime_invoked=0
inference_performed=0
network_authority=0
training_performed=0
distillation_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now produce a prompt-evaluation contract after tool preflight and protective-safety validation.

This does not mean Nadia can materialize prompts, evaluate prompts, run inference, execute tools, use a shell, use a network client, mutate source, read credentials, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-prompt-evaluation-contract-stage-8.sh
```

Expected result:

```
nadia_prompt_evaluation_contract_stage_8: ok
```

Next Stage

Stage-9 now defines a local model-registry contract after prompt-evaluation contracts, protective-safety refusal behavior, runtime-profile metadata, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_PROMPT_EVALUATION_HANDOFF_CONTRACT_STAGE_16_STATUS.md

Source title: Nadia Prompt Evaluation Handoff Contract Stage-16 Status

Lines: 101 | Words: 290 | SHA-256: e86f8f544e63f75737a0adb0641a74977fbaf506f9f666def21d44e535fcd2d6

Nadia Prompt Evaluation Handoff Contract Stage-16 Status

Status: implementation status record Date: 2026-05-25 Scope: prompt-evaluation handoff metadata before prompt tokenization, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-16 adds a prompt-evaluation handoff contract generator.

The contract verifies Stage-15 awareness-dialogue metadata and inherited protective, prompt, model, runtime, and tool-denial boundaries, then records a blocked handoff state that requires a future tokenization boundary before any prompt evaluation can be considered. It remains contract-only and does not evaluate prompts.

Evidence Flags

```

inference_performed=0
tool_execution_authority=0
tool_execution_performed=0
network_authority=0
```

Current Claim

Nadia can now produce a prompt-evaluation handoff contract that packages the Stage-15 awareness-dialogue evidence and explicitly blocks prompt evaluation until a future tokenization boundary exists.

This does not mean Nadia can evaluate prompts, tokenize prompts, generate dialogue, answer user prompts, browse the web, provide legal advice, provide medical advice, provide trauma counseling, receive prompt text, materialize prompt content, load model weights, spawn a runtime process, generate tokens, run inference, execute tools, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-prompt-evaluation-handoff-contract-stage-16.sh
```

Expected result:

```
nadia_prompt_evaluation_handoff_contract_stage_16: ok
```

Next Stage

Stage-17 now defines a tokenization boundary contract only after prompt-evaluation handoff metadata, awareness-dialogue metadata, prompt-materialization metadata, prompt-receipt metadata, model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_PROMPT_EVALUATION_INPUT_CONTRACT_STAGE_28_STATUS.md

Source title: Nadia Prompt Evaluation Input Contract Stage-28 Status

Lines: 113 | Words: 324 | SHA-256: be41a1d53febc3beb1b1896f6200ef804aa37f10c3ec06bd2ae6491da79972da

Nadia Prompt Evaluation Input Contract Stage-28 Status

Status: implementation status record

Scope: prompt-evaluation-input metadata before prompt evaluation input creation, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-28 adds a prompt-evaluation-input contract generator.

It consumes the Stage-27 context-window assembly report as prerequisite evidence and records a future review lane for prompt-evaluation input schema, context-window references, prompt-token-sequence references, safety-envelope policy, runtime-denial policy, and prompt-evaluation runtime handoff requirements. It remains contract-only: no prompt text is read, no context window is assembled, no prompt evaluation input is created, no runtime is invoked, no prompt is evaluated, and no dialogue is generated.

Status Fields

```

prompt_tokenized=0
runtime_invoked=0
runtime_session_created=0
prompt_evaluated=0
qa_dialogue_generated=0
sexual_request_refusal=always
manipulation_resistance=required
```

Stage-28 inherits all Nadia protective-safety and awareness-dialogue restrictions:

```
sexual_user_request_authority=0
sexual_content_generation=0
sexualized_dialogue_generation=0
graphic_sexual_detail_allowed=0
erotic_content_allowed=0
roleplay_allowed=0
survivor_impersonation_allowed=0
survivor_identifying_speculation_allowed=0
victim_blaming_allowed=0
genocide_denial_allowed=0
hate_or_collective_blame_allowed=0
sexual_request_refusal=always
manipulation_resistance=required
prompt_injection_override_authority=0
policy_bypass_authority=0
namesake_cause_awareness=1
```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose prompt-evaluation-input as metadata-only. The command delegates to scripts/nadia-prompt-evaluation-input-contract.sh after installation and writes reports under share/latticra/nadia/prompt-evaluation-input/.

Next Boundary

Nadia can now produce a prompt-evaluation-input contract that packages Stage-27 context-window assembly evidence and records review requirements for a future prompt-evaluation runtime handoff contract.

Prompt evaluation, runtime invocation, token generation, and dialogue generation remain blocked until a later contract explicitly names the runtime handoff format, evaluation request shape, safety inheritance, operator review gates, and non-claims.

That later prompt-evaluation runtime handoff contract is the next boundary; Stage-28 only records the prerequisite metadata.

Stage-29 now defines a prompt-evaluation runtime handoff contract that keeps runtime handoff, runtime invocation, prompt evaluation, dialogue generation, token generation, and inference blocked.

Validation

```
sh scripts/test-nadia-prompt-evaluation-input-contract-stage-28.sh
```

docs/status/NADIA_PROMPT_EVALUATION_INVOCATION_CONTRACT_STAGE_30_STATUS.md

Source title: Nadia Prompt Evaluation Invocation Contract Stage-30 Status

Lines: 115 | Words: 341 | SHA-256: 45cea5a8b8df0434389746c4efb7a8a4f5f968d152b92ec5527561522d8089f0

Nadia Prompt Evaluation Invocation Contract Stage-30 Status

Status: implementation status record

Scope: prompt-evaluation invocation metadata before invocation request creation, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-30 adds a prompt-evaluation invocation contract generator.

It consumes the Stage-29 prompt-evaluation runtime handoff report as prerequisite evidence and records a future review lane for prompt-evaluation invocation schema, runtime handoff references, evaluation input references, runtime profile references, runtime-invocation contract references, model-load contract references, inference-readiness contract references, invocation-denial policy, token-generation denial policy, and prompt-evaluation result requirements. It remains contract-only: no runtime handoff is performed, no invocation request is created, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

Stage-31 now defines a prompt-evaluation result contract that keeps result recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, and inference blocked.

```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose prompt-evaluation-invocation as metadata-only. The command delegates to scripts/nadia-prompt-evaluation-invocation-contract.sh after installation and writes reports under share/latticra/nadia/prompt-evaluation-invocation/.

Next Boundary

Nadia can now produce a prompt-evaluation invocation contract that packages Stage-29 prompt-evaluation runtime handoff evidence and records review requirements for a future prompt-evaluation result contract.

Runtime invocation, prompt evaluation, token generation, inference, and dialogue generation remain blocked until a later contract explicitly names result shape, runtime execution denial fields, safety inheritance, operator review gates, and non-claims.

That later prompt-evaluation result contract is the next boundary; Stage-30 only records the prerequisite metadata.

Validation

```
sh scripts/test-nadia-prompt-evaluation-invocation-contract-stage-30.sh
```

docs/status/NADIA_PROMPT_EVALUATION_RESULT_CONTRACT_STAGE_31_STATUS.md

Source title: Nadia Prompt Evaluation Result Contract Stage-31 Status

Lines: 120 | Words: 348 | SHA-256: 939acfdb70e22493282c8fdb84acd4eebb7944d2cc412e1250fd47a9d1be4d1f

Nadia Prompt Evaluation Result Contract Stage-31 Status

Status: implementation status record

Scope: prompt-evaluation result metadata before result recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-31 adds a prompt-evaluation result contract generator.

It consumes the Stage-30 prompt-evaluation invocation report as prerequisite evidence and records a future review lane for prompt-evaluation result schema, invocation references, runtime handoff references, evaluation input references, generated-text denial policy, token-generation denial policy, result-review policy, and survivor-centered safety requirements. It remains contract-only: no result record is created, no model output is recorded, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

Stage-32 now defines a prompt-evaluation result review contract that keeps review recording, result recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, and inference blocked.

Status Fields

policy_bypass_authority=0
namesake_cause_awareness=1
```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose prompt-evaluation-result as metadata-only. The command delegates to scripts/nadia-prompt-evaluation-result-contract.sh after installation and writes reports under share/latticra/nadia/prompt-evaluation-result/.

Next Boundary

Nadia can now produce a prompt-evaluation result contract that packages Stage-30 prompt-evaluation invocation evidence and records review requirements for a future prompt-evaluation result review contract.

Runtime invocation, prompt evaluation, token generation, inference, result recording, model-output recording, and dialogue generation remain blocked until a later contract explicitly names result review shape, runtime execution denial fields, safety inheritance, operator review gates, and non-claims.

That later prompt-evaluation result review contract is the next boundary; Stage-31 only records the prerequisite metadata.

Validation

```
sh scripts/test-nadia-prompt-evaluation-result-contract-stage-31.sh
```

docs/status/NADIA_PROMPT_EVALUATION_RESULT_DISPOSITION_CONTRACT_STAGE_33_STATUS.md

Nadia Prompt Evaluation Result Disposition Contract Stage-33 Status

Status: implementation status record

Scope: prompt-evaluation result disposition metadata before disposition recording, release recording, result-review recording, result recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-33 adds a prompt-evaluation result disposition contract generator.

It consumes the Stage-32 prompt-evaluation result review report as prerequisite evidence and records a future release lane for disposition schema, review references, result references, invocation references, runtime handoff references, evaluation input references, generated-text denial policy, token-generation denial policy, result-release policy, and survivor-centered safety requirements. It remains contract-only: no disposition record is created, no release record is created, no review record is created, no result record is created, no model output is read or recorded, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

sexual_request_refusal=always
manipulation_resistance=required
prompt_injection_override_authority=0
policy_bypass_authority=0
namesake_cause_awareness=1
```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose prompt-evaluation-result-release-receipt-review as metadata-only. The command delegates to scripts/nadia-prompt-evaluation-result-release-receipt-review-contract.sh after installation and writes reports under share/latticra/nadia/prompt-evaluation-result-release-receipt-review/.

Next Boundary

Nadia can now produce a prompt-evaluation result release receipt review contract that packages Stage-35 prompt-evaluation result release receipt evidence and records review-disposition requirements for a future prompt-evaluation result release receipt review disposition contract.

Runtime invocation, prompt evaluation, token generation, inference, review recording, review decision recording, review findings recording, receipt recording, receipt signing, receipt publication, release recording, result recording, model-output recording, and dialogue generation remain blocked until a later contract explicitly names review disposition shape, runtime execution denial fields, safety inheritance, operator review gates, and non-claims.

That later prompt-evaluation result release receipt review disposition contract is the next boundary; Stage-36 only records the prerequisite metadata.

Stage-37 now defines that prompt-evaluation result release receipt review disposition contract while preserving the same no-runtime, no-review-recording, no-disposition-recording, no-receipt-signing, and no-inference boundary.

Validation

```
sh scripts/test-nadia-prompt-evaluation-result-release-receipt-review-contract-stage-36.sh
```

docs/status/NADIA_PROMPT_EVALUATION_RESULT_RELEASE_RECEIPT_REVIEW_DISPOSITION_CONTRACT_STAGE_37_STATUS.md

Source title: Nadia Prompt Evaluation Result Release Receipt Review Disposition Contract Stage-37 Status

Lines: 125 | Words: 463 | SHA-256: eb540a1e7c58b07d6c3de9b5f82fa25fce55abb4e038bc1f3efcd69fd40d62b3

Nadia Prompt Evaluation Result Release Receipt Review Disposition Contract Stage-37 Status

Status: implementation status record

Scope: prompt-evaluation result release receipt review disposition metadata before disposition recording, disposition decisions, disposition findings, review recording, review decisions, review findings, receipt recording, receipt signing, receipt publication, release recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-37 adds a prompt-evaluation result release receipt review disposition contract generator.

It consumes the Stage-36 prompt-evaluation result release receipt review report as prerequisite evidence and records a future review-disposition release lane for review references, release receipt references, release references, disposition references, review references, result references, generated-text denial policy, token-generation denial policy, review-disposition release policy, and survivor-centered safety requirements. It remains contract-only: no review disposition is created, no disposition record is created, no disposition decision is recorded, no disposition findings are recorded, no release receipt review is created, no review record is created, no review decision is recorded, no review findings are recorded, no release receipt is created, no receipt is signed, no receipt is emitted, no receipt is published, no release record is created, no model output is read or recorded, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

Nadia Prompt Evaluation Result Release Receipt Review Disposition Release Receipt Review Contract Stage-40 Status

Status: implementation status record

Scope: prompt-evaluation result release receipt review disposition release receipt review metadata before release-receipt-review records, review decisions, review findings, receipt signing, receipt publication, receipt packaging, disposition recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-40 adds a prompt-evaluation result release receipt review disposition release receipt review contract generator.

It consumes the Stage-39 prompt-evaluation result release receipt review disposition release receipt report as prerequisite evidence and records a future review-disposition-release receipt review lane for receipt references, review-denial policy, review-disposition requirements, generated-text denial policy, token-generation denial policy, and survivor-centered safety requirements. It remains contract-only: no release receipt review is recorded, no review decision is recorded, no findings are recorded, no receipt is emitted, no receipt is signed, no receipt is published, no receipt is packaged, no model output is read or recorded, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose prompt-evaluation-result-release-receipt-review-disposition-release-receipt-review as metadata-only. The command delegates to scripts/nadia-prompt-evaluation-result-release-receipt-review-disposition-release-receipt-review-contract.sh after installation and writes reports under share/latticra/nadia/prompt-evaluation-result-release-receipt-review-disposition-release-receipt-review/.

Next Boundary

Nadia can now produce a prompt-evaluation result release receipt review disposition release receipt review contract that packages Stage-39 release receipt evidence and records requirements for a future release receipt review disposition contract.

Runtime invocation, prompt evaluation, token generation, inference, receipt review recording, review decision recording, review findings recording, disposition recording, receipt signing, receipt publication, result recording, model-output recording, and dialogue generation remain blocked until a later contract explicitly names the next disposition boundary and preserves safety inheritance, operator review gates, and non-claims.

namesake_cause_awareness=1
```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose prompt-evaluation-result-release-receipt-review-disposition-release-receipt-review-disposition-release-receipt as metadata-only. The command delegates to scripts/nadia-prompt-evaluation-result-release-receipt-review-disposition-release-receipt-review-disposition-release-receipt-contract.sh after installation and writes reports under share/latticra/nadia/prompt-evaluation-result-release-receipt-review-disposition-release-receipt-review-disposition-release-receipt/.

Next Boundary

Nadia can now produce a prompt-evaluation result release receipt review disposition release receipt review disposition release receipt contract that packages Stage-42 prompt-evaluation result release receipt review disposition release receipt review disposition release evidence and records review requirements for a future prompt-evaluation result release receipt review disposition release receipt review disposition release receipt review contract.

Runtime invocation, prompt evaluation, token generation, inference, review-disposition release recording, release decision recording, release publication, release packaging, release receipt creation, review disposition recording, disposition decision recording, disposition findings recording, review recording, receipt recording, receipt signing, receipt publication, result recording, model-output recording, and dialogue generation remain blocked until a later contract explicitly names review-disposition-release receipt shape, runtime execution denial fields, safety inheritance, operator review gates, and non-claims.

Stage-44 can later record that prompt-evaluation result release receipt review disposition release receipt review disposition release receipt review contract; Stage-43 remains the prerequisite metadata boundary.

Validation

```
sh scripts/test-nadia-prompt-evaluation-result-release-receipt-review-disposition-release-receipt-review-disposition-release-receipt-contract-stage-43.sh
```

Nadia Prompt Evaluation Result Release Receipt Review Disposition Release Receipt Review Disposition Release Receipt Review Contract Stage-44 Status

Status: implementation status record

Scope: prompt-evaluation result release receipt review disposition release receipt review disposition release receipt review metadata before release-receipt-review records, review decisions, review findings, receipt signing, receipt publication, receipt packaging, disposition recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-44 adds a prompt-evaluation result release receipt review disposition release receipt review disposition release receipt review contract generator.

It consumes the Stage-43 prompt-evaluation result release receipt review disposition release receipt review disposition release receipt contract as prerequisite evidence and records a future review-disposition-release receipt review lane for receipt references, review-denial policy, review-disposition requirements, generated-text denial policy, token-generation denial policy, and survivor-centered safety requirements. It remains contract-only: no release receipt review is recorded, no review decision is recorded, no findings are recorded, no receipt is emitted, no receipt is signed, no receipt is published, no receipt is packaged, no model output is read or recorded, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

Nadia Prompt Evaluation Result Review Contract Stage-32 Status

Status: implementation status record

Scope: prompt-evaluation result review metadata before review recording, result recording, model-output recording, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-32 adds a prompt-evaluation result review contract generator.

It consumes the Stage-31 prompt-evaluation result report as prerequisite evidence and records a future review lane for prompt-evaluation result review schema, result references, invocation references, runtime handoff references, evaluation input references, generated-text denial policy, token-generation denial policy, result-disposition policy, and survivor-centered safety requirements. It remains contract-only: no review record is created, no result record is created, no model output is read or recorded, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

Nadia Prompt Evaluation Runtime Handoff Contract Stage-29 Status

Status: implementation status record

Scope: prompt-evaluation runtime handoff metadata before runtime handoff, runtime invocation, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-29 adds a prompt-evaluation runtime handoff contract generator.

It consumes the Stage-28 prompt-evaluation-input report as prerequisite evidence and records a future review lane for prompt-evaluation runtime handoff schema, evaluation input references, runtime profile references, runtime-invocation contract references, model-load contract references, inference-readiness contract references, runtime-denial policy, token-generation denial policy, and prompt-evaluation invocation requirements. It remains contract-only: no prompt evaluation input is created, no runtime handoff is performed, no runtime is invoked, no prompt is evaluated, no token is generated, and no dialogue is generated.

Nadia Prompt Materialization Contract Stage-14 Status

Status: implementation status record Date: 2026-05-25 Scope: prompt-materialization metadata before prompt buffer allocation, prompt text materialization, prompt tokenization, prompt evaluation, token generation, inference, or tool execution.

Summary

Nadia Stage-14 adds a prompt-materialization contract generator.

The contract verifies Stage-13 prompt-receipt metadata and inherited protective, prompt, model, runtime, and tool-denial boundaries, then records an explicitly blocked materialization decision for future operator review. It remains contract-only and does not receive, read, store, hash, classify, tokenize, materialize, or evaluate prompt text.

```

Current Claim

Nadia can now produce a prompt-materialization contract after prompt-receipt evidence is present.

This does not mean Nadia can receive prompt text, read prompt sources, allocate prompt buffers, materialize prompt content, tokenize prompts, store prompt content, hash prompt content, classify prompt content, evaluate prompts, load model weights, spawn a runtime process, create a model session, generate tokens, run inference, execute tools, use a shell, use a network client, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-prompt-materialization-contract-stage-14.sh
```

Expected result:

```
nadia_prompt_materialization_contract_stage_14: ok
```

Next Stage

Stage-15 now defines an awareness-dialogue contract for official Nadia Initiative Q&A scope after prompt-materialization metadata, prompt-receipt metadata, model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

Nadia Prompt Receipt Contract Stage-13 Status

Status: implementation status record Date: 2026-05-25 Scope: prompt-receipt metadata before prompt source opening, prompt text receipt, prompt materialization, prompt evaluation, token generation, inference, or tool execution.

Summary

Nadia Stage-13 adds a prompt-receipt contract generator.

The contract verifies Stage-12 model-load metadata and inherited protective, prompt, model, runtime, and tool-denial boundaries, then records an explicitly blocked receipt decision for future operator review. It remains contract-only and does not receive, read, store, hash, classify, materialize, or evaluate prompt text.

```

Current Claim

Nadia can now produce a prompt-receipt contract after model-load evidence is present.

This does not mean Nadia can receive prompt text, read prompt sources, store prompt content, hash prompt content, classify prompt content, materialize prompts, evaluate prompts, load model weights, spawn a runtime process, create a model session, generate tokens, run inference, execute tools, use a shell, use a network client, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-prompt-receipt-contract-stage-13.sh
```

Expected result:

```
nadia_prompt_receipt_contract_stage_13: ok
```

Next Stage

Stage-14 now defines a prompt-materialization contract after prompt-receipt metadata, model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_PROMPT_TOKEN_SEQUENCE_CONTRACT_STAGE_26_STATUS.md

Source title: Nadia Prompt Token Sequence Contract Stage-26 Status

Lines: 107 | Words: 342 | SHA-256: fdd93461ec0b55b30bf2cc7607013fe6bcd049f01c1b26f5d83fcf9d105b95d9

Nadia Prompt Token Sequence Contract Stage-26 Status

Status: implementation status record

Scope: prompt-token-sequence metadata before prompt token ID recording, token order recording, token offset recording, attention mask creation, position ID creation, context window assembly, prompt evaluation input creation, runtime invocation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-26 adds a prompt-token-sequence contract generator.

It consumes the Stage-25 prompt-tokenization report as prerequisite evidence and records a future review lane for prompt token IDs, token order, token offsets, attention masks, position IDs, context-window policy, and prompt evaluation inputs. It remains contract-only: no prompt text is read, no prompt tokens are created, no token IDs or token order are recorded, no context window is assembled, no runtime is invoked, no prompt is evaluated, and no dialogue is generated.

prompt_injection_override_authority=0
policy_bypass_authority=0
namesake_cause_awareness=1
```

Installer and Console Surface

The Latticra Panel and installed latticra-nadia wrapper expose prompt-token-sequence as metadata-only. The command delegates to scripts/nadia-prompt-token-sequence-contract.sh after installation and writes reports under share/latticra/nadia/prompt-token-sequence/.

Next Boundary

Nadia can now produce a prompt-token-sequence contract that packages Stage-25 prompt-tokenization evidence and records review requirements for a future context-window assembly contract.

Stage-27 now defines a context-window assembly contract that keeps context window assembly, prompt evaluation input creation, runtime invocation, prompt evaluation, dialogue generation, token generation, and inference blocked.

Context-window assembly remains blocked until a later contract explicitly names the context window format, prompt evaluation input shape, truncation policy, safety inheritance, runtime-denial fields, operator review gates, and non-claims.

That later context window assembly contract is the next boundary; Stage-26 only records the prerequisite metadata.

Validation

```
sh scripts/test-nadia-prompt-token-sequence-contract-stage-26.sh
```

docs/status/NADIA_PROMPT_TOKENIZATION_CONTRACT_STAGE_25_STATUS.md

Source title: Nadia Prompt Tokenization Contract Stage-25 Status

Lines: 155 | Words: 349 | SHA-256: 96841ec6d828d4af08c6de67135bbbae0f8f85d24927ad01f05058dd15f1932f

Nadia Prompt Tokenization Contract Stage-25 Status

Status: implementation status record

Date: 2026-05-25 CDT

Scope: prompt-tokenization metadata before prompt text reading, prompt text materialization, prompt buffer allocation, prompt token creation, prompt token sequence recording, tokenizer runtime attachment, tokenizer manifest loading, tokenizer file access, tokenizer vocabulary loading, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-25 adds a prompt-tokenization contract generator.

The contract consumes Stage-24 tokenizer-runtime-attachment metadata, verifies inherited protective, prompt, tokenizer, artifact, model, runtime, dialogue, and tool-denial boundaries, then records the requirements that a future prompt token sequence contract must satisfy. It remains contract-only and does not read prompt text, create prompt tokens, record token sequences, invoke a runtime, evaluate prompts, generate dialogue, generate tokens, or run inference.

prompt_injection_override_authority=0
policy_bypass_authority=0
```

Operational Meaning

Nadia can now produce a prompt-tokenization contract that packages Stage-24 tokenizer-runtime-attachment evidence and records review requirements for a future prompt token sequence contract.

Stage-26 now defines a prompt-token-sequence contract that keeps prompt token ID recording, token order recording, token offset recording, context window assembly, prompt evaluation input creation, runtime invocation, prompt evaluation, dialogue generation, token generation, and inference blocked.

This is not prompt tokenization authority. It does not read prompts, create tokens, record token sequences, invoke a runtime, run inference, generate dialogue, or execute tools.

Guard

```
sh scripts/test-nadia-prompt-tokenization-contract-stage-25.sh
```

Expected:

```
nadia_prompt_tokenization_contract_stage_25: ok
```

docs/status/NADIA_PROTECTIVE_SAFETY_BOUNDARY_STAGE_6_STATUS.md

Source title: Nadia Protective Safety Boundary Stage-6 Status

Lines: 71 | Words: 185 | SHA-256: 4144066a2619fc528ee331daa0d36db2d7176b50780cf9113aea69f92391c063

Nadia Protective Safety Boundary Stage-6 Status

Status: implementation status record Date: 2026-05-25 Scope: non-sexual-use, anti-manipulation, and namesake-cause awareness boundary before prompt evaluation, model runtime, or tool authority.

Summary

Nadia Stage-6 adds a protective-safety boundary generator.

The boundary records absolute non-sexual-use restrictions, anti-manipulation restrictions, namesake-cause awareness, and survivor-witness respect. It fails closed on sexualized request classifications and remains metadata-only.

Evidence Flags

```
nadia_stage_6_protective_safety_boundary_present=1
nadia_protective_safety_generator_present=1
nadia_protective_safety_guard_present=1
nadia_installed_protective_safety_command_planned=1
protective_safety_command=scripts/nadia-protective-safety-boundary.sh
installed_protective_safety_command=latticra-nadia protective-safety
requires_productivity_entry=1
productivity_entry_stage_required=5-productivity-ledger-loop
absolute_protective_boundary=1
sexual_user_request_authority=0
sexual_content_generation=0
sexual_roleplay_authority=0
sexualized_namesake_or_survivor_content=0
sexual_request_refusal=always
user_override_authority=0
prompt_injection_override_authority=0
manipulation_resistance=required
policy_bypass_authority=0
namesake_cause_awareness=1
awareness_context=non_sensational_human_rights

source_mutation_authority=0
training_performed=0
distillation_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now produce a protective-safety boundary report that encodes absolute non-sexual-use and anti-manipulation restrictions.

This does not mean Nadia can run a model, evaluate a prompt, install weights, download models, generate code, execute arbitrary tools, train herself, distill herself, mutate source, use network access, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-protective-safety-boundary-stage-6.sh
```

Expected result:

```
nadia_protective_safety_boundary_stage_6: ok
```

Next Stage

Stage-7 now adds a report-only guarded tool-authority preflight after the protective-safety boundary. It still does not execute tools.

docs/status/NADIA_RUNTIME_INVOCATION_CONTRACT_STAGE_11_STATUS.md

Source title: Nadia Runtime Invocation Contract Stage-11 Status

Lines: 98 | Words: 249 | SHA-256: a6646842ace2ec6833515432dc3d629067ae1cf9f15096f81c1bfed38de62f3d

Nadia Runtime Invocation Contract Stage-11 Status

Status: implementation status record Date: 2026-05-25 Scope: runtime-invocation metadata before runtime process spawning, model session creation, model loading, token generation, inference, prompt evaluation, or tool execution.

Summary

Nadia Stage-11 adds a runtime-invocation contract generator.

The contract verifies Stage-10 inference-readiness metadata and inherited protective, prompt, model, runtime, and tool-denial boundaries, then records an explicitly blocked invocation decision for future operator review. It remains contract-only and does not invoke a runtime.

Evidence Flags

```
nadia_stage_11_runtime_invocation_contract_present=1
nadia_runtime_invocation_contract_generator_present=1
nadia_runtime_invocation_contract_guard_present=1

sexual_request_refusal=always
manipulation_resistance=required
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now produce a runtime-invocation contract after inference-readiness evidence is present.

This does not mean Nadia can spawn a runtime process, execute a runtime binary, create a model session, load model weights, generate tokens, run inference, materialize prompts, evaluate prompts, execute tools, use a shell, use a network client, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-runtime-invocation-contract-stage-11.sh
```

Expected result:

```
nadia_runtime_invocation_contract_stage_11: ok
```

Next Stage

Stage-12 now defines a model-load contract after runtime-invocation metadata, inference-readiness metadata, model-registry metadata, prompt-evaluation contracts, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_RUNTIME_PROFILE_STAGE_2_STATUS.md

Source title: Nadia Runtime Profile Stage-2 Status

Lines: 59 | Words: 170 | SHA-256: 255761604140c88b5bee72668f2c4fb81cbcd233e36ecfef4418621672a7e622

Nadia Runtime Profile Stage-2 Status

Status: implementation status record Date: 2026-05-25 Scope: offline runtime and model-profile metadata before inference.

Summary

Nadia Stage-2 adds a runtime-profile generator for offline model-readiness metadata.

The profile can record runtime family, GGUF/model format, context-window policy, memory budget, and optional local model-file measurement. It does not run inference.

Evidence Flags

```
nadia_stage_2_runtime_profile_present=1
nadia_runtime_profile_generator_present=1
nadia_runtime_profile_guard_present=1
nadia_installed_runtime_profile_command_planned=1
runtime_profile_command=scripts/nadia-runtime-profile.sh
installed_runtime_profile_command=latticra-nadia runtime-profile
model_file_measurement=operator_provided_optional
runtime_family=llama.cpp-compatible
model_format=gguf
network_authority=0
model_runtime_invoked=0
inference_performed=0
prompt_evaluated=0
model_weights_installed=0
tool_execution_authority=0
source_mutation_authority=0
training_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now generate a local runtime profile for future offline inference readiness. The profile may measure an operator-provided local model file.

This does not mean Nadia can run a model, evaluate a prompt, install weights, download models, generate code, execute arbitrary tools, train herself, mutate source, or use network access.

Validation

```
sh scripts/test-nadia-runtime-profile-stage-2.sh
```

Expected result:

```
nadia_runtime_profile_stage_2: ok
```

Next Stage

Stage-3 now adds a developer-workbench planning surface that combines context-pack evidence and runtime-profile evidence into prompt plans without evaluating prompts.

docs/status/NADIA_SYSTEMS_ENGINEERING_MODE_STAGE_4_STATUS.md

Source title: Nadia Systems Engineering Mode Stage-4 Status

Lines: 60 | Words: 184 | SHA-256: d9b916eb7caea9a7eeb0d4d20c12250328f405710660d84028fdce16356e50f2

Nadia Systems Engineering Mode Stage-4 Status

Status: implementation status record Date: 2026-05-25 Scope: systems-engineering mode taxonomy and prompt-plan validation before prompt evaluation.

Summary

Nadia Stage-4 adds a systems-engineering mode validator for Stage-3 prompt plans.

The validator records a mode label, mode focus, validator set, prompt-plan measurement, and authority posture. It fails closed on unknown modes or prompt plans that already claim prompt evaluation or inference.

Evidence Flags

```
nadia_stage_4_systems_engineering_mode_present=1
nadia_mode_validation_generator_present=1
nadia_mode_validation_guard_present=1
nadia_installed_mode_validation_command_planned=1
mode_validation_command=scripts/nadia-mode-validate.sh
installed_mode_validation_command=latticra-nadia mode-validate
requires_prompt_plan=1
prompt_plan_stage_required=3-developer-workbench-planning
mode_taxonomy_present=1
mode_allowed=1
network_authority=0
model_runtime_invoked=0
inference_performed=0
prompt_evaluated=0
model_weights_installed=0
tool_execution_authority=0
source_mutation_authority=0
training_performed=0
human_dignity_principle=1
survivor_witness_respect=1
community_awareness_posture=1
harm_aware_development=1
```

Current Claim

Nadia can now validate that a Stage-3 prompt plan is assigned to an allowed systems-engineering mode while remaining metadata-only.

This does not mean Nadia can run a model, evaluate a prompt, install weights, download models, generate code, execute arbitrary tools, train herself, mutate source, or use network access.

Validation

```
sh scripts/test-nadia-systems-engineering-mode-stage-4.sh
```

Expected result:

```
nadia_systems_engineering_mode_stage_4: ok
```

Next Stage

Stage-5 now adds a local productivity-ledger loop for improving retrieval, ranking, plan templates, and test recommendations without model training or autonomous source mutation.

docs/status/NADIA_TOKENIZATION_BOUNDARY_CONTRACT_STAGE_17_STATUS.md

Source title: Nadia Tokenization Boundary Contract Stage-17 Status

Lines: 110 | Words: 315 | SHA-256: 38ab910711e640f0479f733e659d01fcd4b153ddf13a441cc4ca6f8634c5e656

Nadia Tokenization Boundary Contract Stage-17 Status

Status: implementation status record Date: 2026-05-25 Scope: tokenization-boundary metadata before tokenizer file access, tokenizer vocabulary loading, prompt tokenization, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-17 adds a tokenization-boundary contract generator.

The contract verifies Stage-16 prompt-evaluation handoff metadata and inherited protective, prompt, model, runtime, dialogue, and tool-denial boundaries, then records a blocked tokenization state that requires a future tokenizer specification contract before any tokenizer file or vocabulary can be touched. It remains contract-only and does not tokenize prompts.

```

Current Claim

Nadia can now produce a tokenization-boundary contract that packages Stage-16 prompt-evaluation handoff evidence and explicitly blocks prompt tokenization until a future tokenizer specification contract exists.

This does not mean Nadia can tokenize prompts, load tokenizer files, load tokenizer vocabularies, evaluate prompts, generate dialogue, answer user prompts, browse the web, provide legal advice, provide medical advice, provide trauma counseling, receive prompt text, materialize prompt content, load model weights, spawn a runtime process, generate tokens, run inference, execute tools, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-tokenization-boundary-contract-stage-17.sh
```

Expected result:

```
nadia_tokenization_boundary_contract_stage_17: ok
```

Next Stage

Stage-18 now defines a tokenizer specification contract only after tokenization-boundary metadata, prompt-evaluation handoff metadata, awareness-dialogue metadata, prompt-materialization metadata, prompt-receipt metadata, model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

Nadia Tokenizer Artifact Binding Contract Stage-23 Status

Status: implementation status record

Date: 2026-05-25 CDT

Scope: tokenizer-artifact-binding metadata before tokenizer artifact opening, artifact reading, artifact hashing, artifact verification, artifact binding, tokenizer runtime attachment, tokenizer manifest loading, tokenizer file access, tokenizer vocabulary loading, prompt tokenization, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-23 adds a tokenizer-artifact-binding contract generator.

The contract consumes Stage-22 tokenizer-artifact-verification metadata, verifies inherited protective, prompt, tokenizer, artifact, model, runtime, dialogue, and tool-denial boundaries, then records the requirements that a future tokenizer runtime attachment contract must satisfy. It remains contract-only and does not open tokenizer artifacts, read artifacts, hash artifacts, verify artifacts, bind artifacts, attach tokenizers to a runtime, load tokenizer manifests, open tokenizer files, load vocabularies, or tokenize prompts.

prompt_injection_override_authority=0
policy_bypass_authority=0
```

Operator Meaning

Nadia can now produce a tokenizer-manifest contract that packages Stage-18 tokenizer-specification evidence and records review requirements for a future tokenizer artifact inventory.

This does not mean Nadia can load tokenizer manifests, parse manifests, open tokenizer files, read tokenizer files, load tokenizer vocabularies, tokenize prompts, evaluate prompts, generate dialogue, answer user prompts, browse the web, provide legal advice, provide medical advice, provide trauma counseling, receive prompt text, materialize prompt content, load model weights, spawn a runtime process, generate tokens, run inference, execute tools, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-tokenizer-manifest-contract-stage-19.sh
```

Expected:

```
nadia_tokenizer_manifest_contract_stage_19: ok
```

Next Gate

Stage-20 now defines a tokenizer artifact inventory contract only after tokenizer-manifest metadata, tokenizer-specification metadata, tokenization-boundary metadata, prompt-evaluation handoff metadata, awareness-dialogue metadata, prompt-materialization metadata, prompt-receipt metadata, model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

docs/status/NADIA_TOKENIZER_RUNTIME_ATTACHMENT_CONTRACT_STAGE_24_STATUS.md

Source title: Nadia Tokenizer Runtime Attachment Contract Stage-24 Status

Lines: 152 | Words: 337 | SHA-256: f10f54935af403793bdfaa5db044e0ae0b1eaa8d4888b2d2c66f01c57cc62854

Nadia Tokenizer Runtime Attachment Contract Stage-24 Status

Status: implementation status record

Date: 2026-05-25 CDT

Scope: tokenizer-runtime-attachment metadata before tokenizer artifact opening, artifact reading, artifact hashing, tokenizer artifact binding, tokenizer runtime attachment, runtime session creation, tokenizer manifest loading, tokenizer file access, tokenizer vocabulary loading, prompt tokenization, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-24 adds a tokenizer-runtime-attachment contract generator.

The contract consumes Stage-23 tokenizer-artifact-binding metadata, verifies inherited protective, prompt, tokenizer, artifact, model, runtime, dialogue, and tool-denial boundaries, then records the requirements that a future prompt tokenization contract must satisfy. It remains contract-only and does not attach tokenizers to a runtime, create runtime sessions, tokenize prompts, load tokenizer manifests, open tokenizer files, load vocabularies, or run inference.

prompt_injection_override_authority=0
policy_bypass_authority=0
```

Operational Meaning

Nadia can now produce a tokenizer-runtime-attachment contract that packages Stage-23 tokenizer-artifact-binding evidence and records review requirements for a future prompt tokenization contract.

This is not tokenizer runtime attachment authority. It does not attach tokenizers to a runtime, create runtime sessions, tokenize prompts, run inference, or execute tools.

Stage-25 now defines a prompt-tokenization contract that packages Stage-24 tokenizer-runtime-attachment evidence while keeping prompt text reading, token creation, token sequence recording, runtime invocation, inference, dialogue generation, and tool execution denied.

Guard

```
sh scripts/test-nadia-tokenizer-runtime-attachment-contract-stage-24.sh
```

Expected:

```
nadia_tokenizer_runtime_attachment_contract_stage_24: ok
```

docs/status/NADIA_TOKENIZER_SPECIFICATION_CONTRACT_STAGE_18_STATUS.md

Source title: Nadia Tokenizer Specification Contract Stage-18 Status

Lines: 127 | Words: 336 | SHA-256: 1657b44649758eb94816c11d6cfc1e4783b9c3bfdcc40f08924ad400cf09cffe

Nadia Tokenizer Specification Contract Stage-18 Status

Status: implementation status record Date: 2026-05-25 Scope: tokenizer-specification metadata before tokenizer manifest loading, tokenizer file access, tokenizer vocabulary loading, prompt tokenization, prompt evaluation, dialogue generation, token generation, inference, or tool execution.

Summary

Nadia Stage-18 adds a tokenizer-specification contract generator.

The contract verifies Stage-17 tokenization-boundary metadata and inherited protective, prompt, tokenizer, model, runtime, dialogue, and tool-denial boundaries, then records the requirements that a future tokenizer manifest contract must satisfy. It remains contract-only and does not load tokenizer files, load tokenizer vocabularies, or tokenize prompts.

Current Claim

Nadia can now produce a tokenizer-specification contract that packages Stage-17 tokenization-boundary evidence and records review requirements for a future tokenizer manifest.

This does not mean Nadia can load tokenizer manifests, open tokenizer files, read tokenizer files, load tokenizer vocabularies, tokenize prompts, evaluate prompts, generate dialogue, answer user prompts, browse the web, provide legal advice, provide medical advice, provide trauma counseling, receive prompt text, materialize prompt content, load model weights, spawn a runtime process, generate tokens, run inference, execute tools, mutate source, train herself, distill herself, or provide sexualized user-facing behavior.

Validation

```
sh scripts/test-nadia-tokenizer-specification-contract-stage-18.sh
```

Expected result:

```
nadia_tokenizer_specification_contract_stage_18: ok
```

Next Stage

Stage-19 now defines a tokenizer manifest contract only after tokenizer-specification metadata, tokenization-boundary metadata, prompt-evaluation handoff metadata, awareness-dialogue metadata, prompt-materialization metadata, prompt-receipt metadata, model-load metadata, runtime-invocation metadata, inference-readiness metadata, model-registry metadata, protective-safety refusal behavior, and tool-denial behavior are all present and explicitly non-executing.

Nucleus Report-Only Announcement Review

Status: no-new-announcement review

This record reviews whether the recent Nucleus task report-only execution README/status alignment, project-notes Nucleus report-only alignment, and project-notes Nucleus report-only status/index check require a separate public announcement entry.

Reviewed files:

```
STATUS.md
docs/status/ANNOUNCEMENTS.md
docs/status/CURRENT_STATUS.md
docs/status/README.md
docs/FOUNDATION_INDEX.md
docs/status/NUCLEUS_TASK_REPORT_ONLY_EXECUTION_REFINEMENT_STATUS.md
docs/status/NUCLEUS_TASK_REPORT_ONLY_EXECUTION_README_STATUS_ALIGNMENT.md
docs/status/PROJECT_NOTES_NUCLEUS_REPORT_ONLY_ALIGNMENT_STATUS_INDEX_CHECK.md
docs/project_notes/README.md
docs/project_notes/CURRENT_DIRECTION.md
docs/project_notes/UPCOMING_WORK.md
README.md
```

Finding:

```
No new implementation behavior, capability posture, public product readiness, security
guarantee, or runtime behavior was added after the Nucleus report-only execution refinement.
The recent work was README/status/project-notes alignment and status/index checking only.
```

Decision:

```
Do not add a separate public announcement entry for this slice.
Keep the announcement log reserved for capability-bearing, milestone-bearing, or
public-messaging changes that need a dated public update.
Keep the next review lane conditional on actual capability posture changes.
```

Boundary: announcement/status review only. No implementation behavior is changed. No task execution, runtime behavior, command execution, state mutation, file I/O, network I/O, server interaction, recovery behavior, hardware behavior, boot behavior, sandboxing, malware prevention, ransomware prevention, or operating-system completeness is added.

l
```

Current Boundary

The OpenBSD lane does not publish a package, submit to the OpenBSD ports tree, claim ports@ review evidence, claim maintainer acceptance, claim bulk build success, claim portcheck success, enable package redistribution, install an rc.d script, change the kernel, add a privileged helper, grant network authority, or claim production readiness.

The local ports metadata now records the AGPL-3.0-or-later plus CC-BY-4.0 local payload license expression while PERMIT_PACKAGE=No remains closed until source archive, checksum, redistribution, and notice obligations are reviewed.

The source archive contract records the expected latticra-0.0.0.tar.gz distfile and distinfo boundary while keeping archive creation, checksum acceptance, distinfo, PERMIT_PACKAGE=Yes, package artifacts, and build transcript promotion blocked.

The package-build gate is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_BUILD_GATE_CONTRACT.md. It keeps package_build_gate_state=closed-no-effect, openbsd_build_allowed=0, openbsd_make_makesum_run=0, openbsd_make_plist_run=0, openbsd_make_package_run=0, portcheck_run=0, and openbsd_bulk_build_run=0 until source, checksum, license, redistribution, notice, ports environment, operator authorization, payload inspection, install/remove transcript, and publication non-claim evidence exists.

The package-build environment contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_BUILD_ENVIRONMENT_CONTRACT.md. It documents the OpenBSD disposable ports environment requirement while keeping openbsd_build_environment_provisioned=0, explicit_operator_build_authorization=0, environment_transcript_present=0, PERMIT_PACKAGE=No, and all OpenBSD package build commands disabled.

The package artifact naming contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_ARTIFACT_NAMING_CONTRACT.md. It records the future latticra-0.0.0.tgz artifact name while keeping openbsd_package_artifact_created=0, repository_package_artifact_write_allowed=0, package_artifact_sha256_recorded=0, and PERMIT_PACKAGE=No.

The package payload inspection contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_PAYLOAD_INSPECTION_CONTRACT.md. It records the expected OpenBSD payload paths while keeping openbsd_payload_inspection_run=0, package_payload_accepted=0, package_artifact_created=0, and PERMIT_PACKAGE=No.

The package install/remove transcript contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_INSTALL_REMOVE_TRANSCRIPT_CONTRACT.md. It records future disposable install/remove transcript requirements while keeping openbsd_package_install_run=0, openbsd_package_remove_run=0, install_on_host_run=0, and PERMIT_PACKAGE=No.

The package publication non-claim review contract is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_PUBLICATION_NON_CLAIM_REVIEW_CONTRACT.md. It records local-only OpenBSD publication and official-port non-claims while keeping openbsd_package_publication_claimed=0, openbsd_pkg_repo_publish_run=0, package validation promotion blocked, and PERMIT_PACKAGE=No.

The package validation promotion blocker matrix is recorded in docs/DEBIAN_FREEBSD_OPENBSD_PACKAGE_VALIDATION_PROMOTION_BLOCKER_MATRIX_CONTRACT.md. It ties OpenBSD source, environment, artifact, payload, install/remove, and publication non-claim blockers together while keeping openbsd_platform_build_evidence_accepted=0, openbsd_validation_result_promoted=0, and PERMIT_PACKAGE=No.

Next Recommended Lane

```
Add an OpenBSD package build-evidence intake denial contract before any OpenBSD build lane can
open.
```

openSUSE Ecosystem Integration Status

Status: openSUSE integration and maintenance status record Date: 2026-05-26

Summary

Latticra now has an openSUSE-facing compatibility and maintenance lane for development, Panel prerequisites, and a local-only RPM packaging draft.

This track has the same purpose as the Fedora and Ubuntu tracks, except its scope is openSUSE integration and maintenance.

This is an ecosystem integration checkpoint, not a production readiness claim.

Public Entry Points

openSUSE setup and package posture are linked from:

```
README.md
docs/QUICK_START_CHEATSHEET.md
installer/README.md
docs/status/README.md
```

Current Boundary

The openSUSE lane does not publish an RPM, create an Open Build Service project, submit Latticra to openSUSE, claim official package readiness, claim SUSE endorsement, install a root service, change systemd, change the kernel, add a privileged helper, grant network authority, or claim production readiness.

The local openSUSE RPM draft records package shape and maintenance posture only. The .changes file is a local maintenance record, not accepted Open Build Service submit-request history.

The openSUSE rpmlint and osc availability lane verifies tooling in an openSUSE environment only. It does not run rpmlint against the Latticra spec yet, run osc build, create package artifacts, publish to Open Build Service, or install Latticra on a host.

The openSUSE rpmlint static spec lane runs rpmlint against the local-only openSUSE spec for audit output only. It does not require a clean lint result, create package artifacts, run osc build, publish to Open Build Service, install Latticra, or claim package readiness.

The openSUSE rpmlint findings classification record separates expected local-only draft findings from unexpected blockers. It does not accept a transcript, clear findings, create artifacts, or promote package readiness.

The openSUSE source archive reproducibility contract records the expected Source0 archive shape and evidence required before any package build transcript can be accepted.

The openSUSE source archive fixture lane creates two temporary archive fixtures, compares their SHA-256 values, and inspects the archive listing. It does not create persistent source RPM or binary RPM artifacts, run rpmbuild, run osc build, publish to Open Build Service, or claim package readiness.

The openSUSE RPM topdir handoff lane stages the verified temporary source archive and local-only spec files into a disposable RPM topdir. It does not run rpmbuild, run osc build, create source RPM or binary RPM artifacts, publish to Open Build Service, or claim package readiness.

The openSUSE local RPM build gate contract keeps rpmbuild, osc build, spec-cleaner, package artifact creation, host installation, and Open Build Service publication blocked until source acceptance, lint classification, license, notice, BuildRequires, environment, authorization, payload inspection, install/remove, and OBS non-claim evidence exists.

The openSUSE local RPM build environment contract documents disposable openSUSE build environment requirements while keeping environment provisioning, operator authorization, rpmbuild, osc build, spec-cleaner, package artifacts, host installation, and Open Build Service publication disabled.

The openSUSE RPM artifact naming contract records future source RPM and binary RPM names and disposable output boundaries while keeping repository RPM artifact writes, checksum claims, artifact creation, host installation, and Open Build Service publication disabled.

The openSUSE RPM payload inspection contract records future source RPM and binary RPM payload inspection evidence while keeping inspection runs, payload acceptance, RPM artifacts, host installation, and Open Build Service publication disabled.

The openSUSE RPM install/remove transcript contract records future disposable install/remove evidence while keeping install/remove runs, host mutation, RPM artifacts, package readiness, and Open Build Service publication disabled.

The openSUSE OBS publication non-claim review contract records Open Build Service, submit-request, official-package, and SUSE endorsement non-claims while keeping OBS actions, package publication, validation promotion, and readiness disabled.

Next Recommended Lane

Add openSUSE RPM validation promotion blocker matrix before any package validation result can be accepted.

docs/status/PROJECT_NOTES_FOLLOWUP_STATUS_INDEX_CHECK.md

Source title: Project Notes Follow-up Status/Index Check

Lines: 32 | Words: 91 | SHA-256: 99400e8c8a815df88f941fd288f6f54b45ef53ba9967e02124f39f7c11248a7b

Project Notes Follow-up Status/Index Check

Status: status/index check

This record verifies that the project-notes follow-up alignment is reflected across the public status surfaces after the project-notes refresh.

Reviewed files:

```
STATUS.md
docs/status/CURRENT_STATUS.md
docs/status/README.md
docs/project_notes/README.md
docs/project_notes/CURRENT_DIRECTION.md
docs/project_notes/UPCOMING_WORK.md
```

Finding:

```
The project-notes files were refreshed, but the detailed current status page and status index
still needed a final follow-up record.
```

Resolution:

```
Add this status/index check record.
Add this record to the status index.
Advance root and detailed status queues.
```

Boundary: documentation/status check only. No implementation behavior is changed.

docs/status/PROJECT_NOTES_NUCLEUS_ANNOUNCEMENT_README_ALIGNMENT_STATUS_CHECK.md

Source title: Project Notes Nucleus Announcement README Alignment Status Check

Lines: 33 | Words: 166 | SHA-256: 4cd69be5d619c2210fcfa17b09dcbf348b15db5c0fc5679e33f2ea9c13dec193

Project Notes Nucleus Announcement README Alignment Status Check

Status: status/index check

This record verifies that the project-note body alignment after the Nucleus report-only announcement README alignment is represented across public status and index surfaces.

Reviewed files:

```
STATUS.md
docs/status/CURRENT_STATUS.md
docs/status/README.md
docs/FOUNDATION_INDEX.md
docs/project_notes/CURRENT_DIRECTION.md
docs/project_notes/UPCOMING_WORK.md
```

Finding:

```
The project-note body files were aligned after the Nucleus report-only announcement README
alignment, but root status, detailed current status, the status index, and the foundation index
still needed a final status/index check record.
```

Resolution:

```
Add this status/index check record.
Add this record to the status index and foundation index.
Advance root and detailed status ledgers without changing completion estimates.
Keep the next review lane conditional on capability posture changes.
```

Boundary: documentation/status/index check only. No implementation behavior is changed. No public announcement entry is added, and no task execution, runtime behavior, command execution, state mutation, file I/O, network I/O, server interaction, recovery behavior, hardware behavior, boot behavior, sandboxing, malware prevention, ransomware prevention, or operating-system completeness is added.

docs/status/PUBLIC_ENTRY_POINT_CONSISTENCY_SCAN.md

Source title: Public Entry-Point Consistency Scan

Lines: 35 | Words: 104 | SHA-256: 3d058eb2763229da8477465b8f9a2b85b25a1d3b2ec931d1c7edfbf2d91c3351

Public Entry-Point Consistency Scan

Status: public entry-point scan

This record reviews the main public entry points after the recent authority review, status/index alignment, foundation-index alignment, and announcement review slices.

Reviewed files:

```
README.md
STATUS.md
docs/FOUNDATION_INDEX.md
docs/status/README.md
docs/status/CURRENT_STATUS.md
docs/status/ANNOUNCEMENTS.md
docs/project_notes/README.md
docs/project_notes/CURRENT_DIRECTION.md
docs/project_notes/UPCOMING_WORK.md
```

Finding:

```
README.md still pointed at older status records and did not list the newest authority review,
completion review, status announcement review, or public entry-point scan records.
```

Resolution:

```
Add the missing public status/review records to README.md.
Add this scan to the status index.
Advance the root status queue.
```

Boundary: documentation consistency scan only. No implementation behavior is changed.

docs/status/RBDM_REPORT_INTEGRATION_STATUS.md

Source title: RBDM Report Integration Status

Lines: 50 | Words: 107 | SHA-256: 170c84c780ea7bda658e1cfc61ae5d5630daf480527d2048a65b5a68afc70b82

RBDM Report Integration Status

Status: merged report integration surface

This record tracks the Runtime Boundary Domain Matrix report integration slice.

Merged PR:

```
#115 Add RBDM report integration
```

Merged commit:

```
ee1ea215e64bbb1c7b10010ce6e4e282ae044687
```

Primary files:

```
src/runtime_boundary_domain_matrix_report.c
tests/runtime_boundary_domain_matrix_report_integration.c
scripts/test-runtime-boundary-domain-matrix-report-integration.sh
.github/workflows/runtime-boundary-domain-matrix-report-integration.yml
docs/RUNTIME_BOUNDARY_DOMAIN_MATRIX_REPORT_INTEGRATION.md
```

What it adds:

```
RBDM report rendering
cell label output
domain label output
known/operational/declarative/future-gated flags
effect-allowed flag
authority-available flag
evidence-level output
small-buffer and null-argument handling
```

Validation:

```
sh scripts/test-runtime-boundary-domain-matrix-report-integration.sh
sh scripts/test-runtime-boundary-domain-matrix-refinement.sh
sh scripts/test-runtime-boundary.sh
```

Boundary: report metadata only. No runtime behavior, command execution, Lat execution, LIR execution, state mutation, file I/O, network I/O, server interaction, hardware behavior, or operating-system completeness is added.

docs/status/SEAL_AGENTIC_AUTOMATION_SECURITY_INDEX_ALIGNMENT.md

Source title: Latticra Seal Agentic Automation Security Index Alignment

Lines: 103 | Words: 385 | SHA-256: bc245e52630a8d55d1d0ce0194a19e9b4f0a168ea2d4b6cb3a88961272763f8a

Latticra Seal Agentic Automation Security Index Alignment

Status: index alignment record Source: PR #268 Scope: documentation/status index alignment after the report-only Latticra Seal agentic automation security status record. This record does not implement runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipts, public-key parsing, public-key trust stores, key generation, private-key storage, hardware key use, network trust lookup, revocation lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This record keeps the Seal agentic automation security checkpoint visible as a status/index alignment item after the merged report-only metadata and status-record slices.

The purpose is to preserve the evidence chain:

```
contract -&gt; MCP alignment plan -&gt; report-only metadata implementation -&gt; status record
-&gt; index
alignment
```

Reviewed files

```
docs/LATTICRA_SEAL_AGENTIC_AUTOMATION_SECURITY_CONTRACT.md

scripts/test-latticra-seal-agentic-automation-security-public-entrypoint-alignment.sh
docs/status/SEAL_AGENTIC_AUTOMATION_SECURITY_PUBLIC_ENTRYPOINT_ALIGNMENT.md
```

Alignment checkpoint

Current alignment posture:

```
seal_agentic_contract_indexed=1
seal_mcp_alignment_plan_indexed=1
seal_agentic_metadata_implementation_indexed=1
seal_agentic_status_record_indexed=1
seal_agentic_status_guard_indexed=1
seal_agentic_index_alignment_record_present=1
seal_agentic_public_entrypoint_alignment_present=1
mode=doc-status-alignment
implementation_behavior_changed=0
runtime_authority_granted=0
host_behavior_changed=0
network_behavior_changed=0
mcp_behavior_changed=0
agent_execution_added=0
tool_execution_added=0
shell_execution_added=0
cryptographic_enforcement_added=0
capability_enforcement_added=0
```

Current status summary

The Seal agentic automation security layer is now represented as:

```
planning contract present
MCP alignment plan present
report-only C metadata present
deterministic invariant test present
status record present
status guard present
```

```
index alignment record present
```

The layer remains report-only and no-effect.

Validation

This index alignment is covered by:

```
sh scripts/test-latticra-seal-agentic-automation-security-index-alignment.sh
```

The underlying Seal agentic automation checkpoint remains covered by:

```
sh scripts/test-latticra-seal-agentic-automation-security-status.sh
sh scripts/test-latticra-seal-agentic-automation-security-contract.sh
sh scripts/test-latticra-seal-mcp-alignment-plan.sh
sh scripts/test-latticra-seal-agentic-automation-security.sh
```

Boundary

This record is documentation/status alignment only.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, receipt verification, capability enforcement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is policy decision status/public-entry alignment.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

Latticra Seal Agentic Automation Security Public Entrypoint Alignment

Status: public-entrypoint alignment record for the Latticra Seal agentic automation security checkpoint Source: local follow-up slice Scope: README, root status, status index, foundation index, and project-notes alignment after the completed report-only Latticra Seal agentic automation security metadata, status, index-alignment, and report-surface slices. This record does not implement runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipts, public-key parsing, public-key trust stores, key generation, private-key storage, hardware key use, network trust lookup, revocation lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, or shell execution.

Purpose

This record makes the completed Seal agentic automation security checkpoint visible from public entry points.

The purpose is to keep public project readers aligned with the current Seal state without claiming enforcement, production readiness, MCP implementation, AI-agent execution control, model execution, tool execution, shell execution, or operational authority.

cryptographic_enforcement_added=0
capability_enforcement_added=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Current Seal summary

The public entry points now present Seal agentic automation security as:

```
agentic automation security contract present
MCP alignment plan present
```

```
report-only C metadata present
deterministic invariant test present
status record present
status/index alignment present
operator-visible deterministic report surface present
report surface status present
public-entrypoint alignment present
runtime authority remains denied
```

The layer remains report-only, metadata-only, and no-effect.

Validation

This public-entrypoint alignment is covered by:

```
sh scripts/test-latticra-seal-agentic-automation-security-public-entrypoint-alignment.sh
```

The underlying checkpoint remains covered by:

```
sh scripts/test-latticra-seal-agentic-automation-security-contract.sh
sh scripts/test-latticra-seal-mcp-alignment-plan.sh
sh scripts/test-latticra-seal-agentic-automation-security.sh
sh scripts/test-latticra-seal-agentic-automation-security-status.sh
sh scripts/test-latticra-seal-agentic-automation-security-index-alignment.sh
sh scripts/test-latticra-seal-agentic-automation-security-report-surface.sh
sh scripts/test-latticra-seal-agentic-automation-security-report-surface-status.sh
```

Expected output:

```
seal agentic automation security public entrypoint alignment: ok
```

Boundary

This record is documentation/public-entrypoint alignment only.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is policy decision status/public-entry alignment.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

docs/status/SEAL_AGENTIC_AUTOMATION_SECURITY_REPORT_SURFACE_STATUS.md

Source title: Latticra Seal Agentic Automation Security Report Surface Status

Lines: 87 | Words: 344 | SHA-256: 3f2a7f12b933df1c12ee4d8e9e9df76502ddc44446086fff30d2141028956f96

Latticra Seal Agentic Automation Security Report Surface Status

Status: status record for the Seal agentic automation security report surface Source: PR #270 Scope: status alignment after the deterministic local report surface for Latticra Seal agentic automation security metadata. This record does not implement runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipts, public-key parsing, public-key trust stores, key generation, private-key storage, hardware key use, network trust lookup, revocation lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This status record makes the Seal agentic automation report surface visible as a current project checkpoint.

The report surface provides a deterministic local fixture and shell runner for rendering the current report-only Seal agentic automation metadata.

Reviewed files

```

docs/status/SEAL_AGENTIC_AUTOMATION_SECURITY_PUBLIC_ENTRYPOINT_ALIGNMENT.md
```

Current checkpoint

Current report-surface posture:

```
seal_agentic_report_surface_document_present=1
seal_agentic_report_surface_fixture_present=1
seal_agentic_report_surface_runner_present=1
seal_agentic_report_surface_guard_present=1
renders_agentic_report=1
uses_local_deterministic_fixture=1
operator_visible_report_surface=1
seal_agentic_public_entrypoint_alignment_present=1
implementation_behavior_changed=0
runtime_behavior_added=0
host_behavior_added=0
network_behavior_added=0
external_service_behavior_added=0
```

Expected report posture

The report surface renders the current report-only agentic metadata posture, including:

```
agentic_profile=latticra-seal-agentic-automation-security/0.1
automation_context=local-report-only
mcp_alignment_declared=1
mode=report-only
decision=report-only
status=agentic-automation-security-metadata
```

Validation

The report surface is covered by:

```
sh scripts/test-latticra-seal-agentic-automation-security-report-surface.sh
```

The underlying metadata implementation remains covered by:

```
sh scripts/test-latticra-seal-agentic-automation-security.sh
```

Expected output:

```
seal agentic automation security report surface: ok
```

Boundary

This status record is documentation/status alignment only.

The report surface compiles and runs a local deterministic fixture only. It does not add protocol behavior, runtime behavior, host behavior, network behavior, model behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is policy decision status/public-entry alignment.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

Latticra Seal Agentic Automation Security Status

Status: status record for report-only Latticra Seal agentic automation security metadata Source: local follow-up slice Scope: status alignment after the initial report-only Seal agentic automation security metadata implementation. This record does not implement runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipts, public-key parsing, public-key trust stores, key generation, private-key storage, hardware key use, network trust lookup, revocation lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This status record makes the report-only Latticra Seal agentic automation security implementation visible as a current project checkpoint.

It records that the implementation is metadata-only, deterministic, bounded, and no-effect.

seal agentic automation security contract: ok
seal mcp alignment plan: ok
seal agentic automation security invariants: ok
seal agentic automation security status: ok
seal agentic automation security public entrypoint alignment: ok
seal status rollup status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the agentic automation security status guard workflow and records the guarded status rollup status predecessor without changing the report-only agentic automation security implementation.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, receipt verification, capability enforcement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is parameter schema status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

docs/status/SEAL_CAPABILITY_GATE_STATUS.md

Source title: Latticra Seal Capability Gate Status

Lines: 191 | Words: 550 | SHA-256: 3826371c585cd15d32137b545bbf48c7fe603c2d78868a5b614eb7016b2ef11c

Latticra Seal Capability Gate Status

Status: status record for Latticra Seal capability gate metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal capability gate implementation. This record does not add capability enforcement, runtime authority, effect execution, cryptographic verification, verified receipt authority, signing, public-key byte verification, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, object sealing, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal capability gate metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, denied-by-default, unverified-receipt-aware, authority-unusable, effect-not-performed, runtime-authority-denied, and no-effect.

seal capability gate status: ok
seal effect decision contract: ok
seal effect decision status: ok
seal runtime handoff status: ok
seal verification receipt status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the capability gate status guard workflow and records the guarded verification receipt status predecessor without changing the metadata-only denied capability gate implementation.

It does not add capability enforcement, runtime authority, effect execution, cryptographic verification, verified receipt authority, signing, public-key byte verification, public-key trust-store behavior, key material loading, private-key handling, key generation, hardware-key use, revocation lookup, signer invocation behavior, signer process execution, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is effect decision status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must not add runtime execution, effect execution, capability enforcement, runtime authority, cryptographic verification, verified receipt authority, signing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, revocation lookup, signer invocation behavior, host behavior, network behavior, object sealing, or kernel behavior unless separately implemented and guarded.

docs/status/SEAL_CAPABILITY_METADATA_REPORT_SURFACE_STATUS.md

Source title: Latticra Seal Capability Metadata Report Surface Status

Lines: 116 | Words: 332 | SHA-256: 5a6f82c31e7224d4ffe6c9a0d745265616336144a952d9108fad16535a876031

Latticra Seal Capability Metadata Report Surface Status

Status: status record for the Latticra Seal capability metadata report surface Scope: status alignment after the deterministic local report surface for Latticra Seal capability metadata. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This status record makes the Seal capability metadata report surface visible as a current project checkpoint.

The report surface renders a deterministic local fixture capability candidate while keeping execution, host access, network use, effects, and runtime authority denied.

Reviewed files

This report surface is covered by:

```
sh scripts/test-latticra-seal-capability-metadata-report-surface.sh
```

This status record is covered by:

```
sh scripts/test-latticra-seal-capability-metadata-report-surface-status.sh
```

The underlying capability metadata implementation remains covered by:

```
sh scripts/test-latticra-seal-capability-metadata.sh
```

Expected output:

```
latticra seal capability metadata report surface status: ok
```

Boundary

This status record is documentation/status alignment only.

It does not add runtime behavior, policy behavior, protocol behavior, host behavior, network behavior, model behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is capability metadata status-index alignment or a future product-spine alignment record.

That future slice must preserve the no-effect posture and must not perform effects or grant authority.

docs/status/SEAL_CORE_BLOCKED_CASES_STATUS.md

Source title: Latticra Seal Core Blocked Cases Status

Lines: 107 | Words: 286 | SHA-256: bd5a0bab42e7487bafe24ab03504bedded17cf678d6814d9205081c57f35514a

Latticra Seal Core Blocked Cases Status

Status: status record for the completed core blocked-request case set Scope: status alignment after the unknown-tool, unsigned-request, stale-request, and replayed-request case fixtures. This record does not implement runtime behavior, enforcement, execution, effects, host operations, network operations, cryptographic verification, or authority grants.

Purpose

This status record marks the first completed core negative-test evidence set for the Latticra Seal runtime gate metadata path.

The completed set verifies that the report-only runtime gate metadata path keeps the gate blocked and grants no authority for four core request classes.

Completed case fixtures

```
unknown_tool_case_fixture_present=1
unsigned_request_case_fixture_present=1
stale_request_case_fixture_present=1
replayed_request_case_fixture_present=1
core_blocked_case_set_present=1
core_blocked_case_set_complete=1
```

sh scripts/test-latticra-seal-unsigned-request-case.sh
sh scripts/test-latticra-seal-stale-request-case.sh
sh scripts/test-latticra-seal-replayed-request-case.sh
```

Expected outputs:

```
seal unknown tool case: ok
seal unsigned request case: ok
seal stale request case: ok
seal replayed request case: ok
```

Evidence posture

```
core_case_unknown_tool_validated=1
core_case_unsigned_request_validated=1
core_case_stale_request_validated=1
core_case_replayed_request_validated=1
runtime_gate_report_only=1
runtime_authority_granted=0
effect_performed=0
host_read_performed=0
host_write_performed=0
network_performed=0
```

Public claim boundary

This status record is an important milestone, but it does not yet justify saying that Latticra broadly secures AI agents.

A careful public claim may now say:

```
Latticra Seal now has a report-only runtime gate path with core negative-test evidence for
AI-era tool-boundary planning.
```

The stronger claim still requires guarded runtime enforcement behavior and an operator-visible evidence report.

Non-claims

```
ai_agent_security_claimed=0
runtime_enforcement_implemented=0
policy_enforcement_implemented=0
tool_execution_implemented=0
host_behavior_implemented=0
network_behavior_implemented=0
authority_granted=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Next valid slice

The next valid slice is public milestone wording for the report-only core case evidence set, or an operator-visible evidence report surface that summarizes the full Seal chain.

docs/status/SEAL_CORE_EVIDENCE_INDEX_ALIGNMENT.md

Source title: Latticra Seal Core Evidence Index Alignment

Lines: 105 | Words: 394 | SHA-256: 2824e9b8d537ae64361747130a0bd60492f5710ecbcaa19a90bace5858202a05

Latticra Seal Core Evidence Index Alignment

Status: index alignment record for the Latticra Seal core evidence status surface Source: PR #296 Scope: documentation/status index alignment after the Latticra Seal core evidence status surface. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, host reads, host writes, network behavior, policy enforcement, capability enforcement, cryptographic verification, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, operating-system behavior, Fedora approval claims, external endorsement claims, production readiness, or authority grants.

Purpose

This record keeps the completed Seal core evidence status surface visible from the status index after the merged report-only evidence and status-surface slices.

The purpose is to preserve the evidence chain:

```
Seal metadata chain -&gt; core blocked-request case evidence -&gt; core evidence report -&gt;
public
status update -&gt; status surface -&gt; status index alignment
```

Reviewed files

tool_execution_added=0
cryptographic_enforcement_added=0
capability_enforcement_added=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Current status summary

The Seal core evidence lane is now represented as:

```
report-only metadata chain present
core blocked-request case evidence complete
operator-visible evidence report present
public status update present
status surface present
status guard present
status index alignment record present
```

The lane remains report-only and no-effect.

Validation

This index alignment is covered by:

```
sh scripts/test-latticra-seal-core-evidence-index-alignment.sh
```

The underlying Seal core evidence checkpoint remains covered by:

```
sh scripts/test-latticra-seal-core-evidence-report.sh
sh scripts/test-latticra-seal-core-evidence-public-status.sh
sh scripts/test-latticra-seal-core-evidence-status.sh
```

Expected output:

```
latticra seal core evidence index alignment: ok
```

Boundary

This record is documentation/status index alignment only.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is a public entry-point refresh for the completed Seal core evidence milestone or a guarded policy-decision status surface.

That future slice must preserve the report-only posture until a specific contract, deterministic local fixture, no-effect dry-run report, guarded allowlist posture, and validation path justify any later runtime work.

docs/status/SEAL_CORE_EVIDENCE_PUBLIC_ENTRYPOINT_ALIGNMENT.md

Source title: Latticra Seal Core Evidence Public Entrypoint Alignment

Lines: 110 | Words: 410 | SHA-256: 42941e10bc734df14cde001de2cfbb5f4c73a47958609463eeeb6cc3a0276eeb

Latticra Seal Core Evidence Public Entrypoint Alignment

Status: public entrypoint alignment record for the Latticra Seal core evidence milestone Source: PR #297 Scope: public entrypoint alignment after the Latticra Seal core evidence status surface and status-index alignment. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, host reads, host writes, network behavior, policy enforcement, capability enforcement, cryptographic verification, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, operating-system behavior, Fedora approval claims, external endorsement claims, production readiness, or authority grants.

Purpose

This record makes the completed Latticra Seal core evidence milestone visible from the root public entrypoints after the status surface and status index alignment slices.

The purpose is to preserve the public evidence chain:

```
core evidence report -&gt; public status update -&gt; status surface -&gt; status index
alignment -&gt; root
 public entrypoint alignment
```

Reviewed files

```
README.md
STATUS.md
docs/status/README.md
docs/status/SEAL_CORE_EVIDENCE_STATUS.md
docs/status/SEAL_CORE_EVIDENCE_INDEX_ALIGNMENT.md
```

Alignment checkpoint

Current public entrypoint posture:

```
readme_mentions_seal_core_evidence_status=1
readme_mentions_seal_core_evidence_index_alignment=1
root_status_mentions_seal_core_evidence=1
status_index_mentions_seal_core_evidence=1
seal_core_public_entrypoint_alignment_record_present=1
foundation_index_entrypoint_followup_pending=1
status_index_public_entrypoint_followup_pending=1
mode=doc-public-entrypoint-alignment
implementation_behavior_changed=0
runtime_authority_granted=0
runtime_enforcement_implemented=0
policy_enforcement_implemented=0
host_behavior_changed=0
network_behavior_changed=0
mcp_behavior_changed=0
agent_execution_added=0
tool_execution_added=0
cryptographic_enforcement_added=0
capability_enforcement_added=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Current public summary

The root public entrypoints now make the Seal core evidence milestone discoverable as:

```
report-only runtime gate path present
core negative-test evidence present
unknown-tool case represented
unsigned-request case represented
stale-request case represented
replayed-request case represented
runtime authority still denied
no host or network effect reported
no production security claim made
```

The current careful public claim remains:

```
Latticra Seal now has a report-only runtime gate path with core negative-test evidence for
AI-era tool-boundary planning.
```

Validation

This public entrypoint alignment is covered by:

```
sh scripts/test-latticra-seal-core-evidence-public-entrypoint-alignment.sh
```

The underlying Seal core evidence checkpoint remains covered by:

```
sh scripts/test-latticra-seal-core-evidence-report.sh
sh scripts/test-latticra-seal-core-evidence-public-status.sh
sh scripts/test-latticra-seal-core-evidence-status.sh
sh scripts/test-latticra-seal-core-evidence-index-alignment.sh
```

Expected output:

```
latticra seal core evidence public entrypoint alignment: ok
```

Boundary

This record is documentation/public-entrypoint alignment only.

It does not add runtime behavior, policy behavior, protocol behavior, host behavior, network behavior, model behavior, tool behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is a foundation/status-index public-entrypoint follow-up, a guarded policy-decision status surface, or a no-effect dry-run planning contract for future runtime behavior.

That future slice must preserve the report-only posture until a specific contract, deterministic local fixture, no-effect dry-run report, guarded allowlist posture, and validation path justify any later runtime work.

docs/status/SEAL_CORE_EVIDENCE_PUBLIC_STATUS_UPDATE.md

Source title: Latticra Seal Core Evidence Public Status Update

Lines: 95 | Words: 414 | SHA-256: faf78891ebc6d2bfe4786b0b0ae48e0a2a3f2cc385601efe3105845fc4e2663c

Latticra Seal Core Evidence Public Status Update

Status: public status update draft for the Latticra Seal core evidence milestone Scope: public-facing status language after the completed report-only Seal runtime gate metadata path and the completed core case evidence set. This document does not implement runtime behavior, execution, effects, host operations, network operations, policy enforcement, or authority grants.

Public milestone

Latticra Seal has reached an important report-only milestone.

The project now has an operator-visible evidence path for a report-only runtime gate and a completed core case evidence set covering:

This is an operator-visible evidence report surface, not runtime enforcement.

```
unknown tool case
unsigned request case
stale request case
replayed request case
```

This means Latticra Seal can now show, in deterministic local reports, how its planned AI-era tool-boundary model handles several high-risk request classes without granting runtime authority or performing effects.

What this means

This milestone supports the careful public claim:

```
Latticra Seal now has a report-only runtime gate path with core negative-test evidence for
AI-era tool-boundary planning.
```

It is also accurate to say:

```
Latticra Seal is building an evidence-bound trust boundary for AI-era automation.
```

What this does not mean yet

This milestone does not mean Latticra broadly secures AI agents in production.

The project is still in report-only, evidence-building mode.

Current non-claims:

```
ai_agent_security_claimed=0
runtime_enforcement_implemented=0
policy_enforcement_implemented=0
tool_execution_implemented=0
host_behavior_implemented=0
network_behavior_implemented=0
authority_granted=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Evidence summary

The current evidence report records:

```
seal_agentic_automation_metadata_present=1
seal_parameter_schema_metadata_present=1
seal_request_freshness_metadata_present=1
seal_signed_request_metadata_present=1
seal_policy_decision_metadata_present=1
seal_runtime_gate_metadata_present=1
unknown_tool_case_validated=1
unsigned_request_case_validated=1
stale_request_case_validated=1
replayed_request_case_validated=1
core_blocked_case_set_complete=1
runtime_gate_report_only=1
runtime_authority_granted=0
effect_performed=0
host_read_performed=0
host_write_performed=0
network_performed=0
```

Suggested public wording

```
Latticra Seal has reached a new report-only security architecture milestone: a runtime gate
evidence path for AI-era tool-boundary planning.

The current Seal chain now includes metadata and reports for agentic automation, parameter
schema posture, request freshness, signed-request posture, policy decision posture, and runtime
gate posture.

Most importantly, the first core case evidence set is now represented: unknown tools, unsigned
requests, stale requests, and replayed requests all remain blocked in the report-only runtime
gate path, with no runtime authority, host operation, network operation, or effect reported.

This is not a production security claim yet. It is an evidence-bound architecture milestone:
Latticra Seal is building the trust boundary that future AI-agent tool execution must pass
through before any authority can be considered.
```

Next work

The next valid milestone is an operator-facing evidence report surface integrated into the broader project status path, followed by continued gate work toward guarded runtime behavior.

docs/status/SEAL_CORE_EVIDENCE_STATUS.md

Source title: Latticra Seal Core Evidence Status

Lines: 125 | Words: 450 | SHA-256: 7538a95cc8eb3207690743066326648e0f39b7b63679c1243b739abb997e9d88

Latticra Seal Core Evidence Status

Status: status record for the Latticra Seal core evidence report surface Source: PR #294 Scope: status integration after the completed report-only Seal runtime gate metadata path and the completed core blocked-request case evidence set. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, host reads, host writes, network behavior, policy enforcement, capability enforcement, cryptographic verification, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, operating-system behavior, Fedora approval claims, external endorsement claims, production readiness, or authority grants.

Purpose

This status record makes the completed Latticra Seal core evidence report visible as an operator-facing project checkpoint.

It connects the report-only runtime gate evidence path, the completed blocked-request case evidence set, and the public claim boundary into one status surface.

The goal is evidence-bound visibility before any future move toward guarded runtime behavior.

Reviewed files

```
docs/LATTICRA_SEAL_CORE_EVIDENCE_REPORT.md
docs/status/SEAL_CORE_EVIDENCE_PUBLIC_STATUS_UPDATE.md
scripts/latticra-seal-core-evidence-report.sh
scripts/test-latticra-seal-core-evidence-report.sh
scripts/test-latticra-seal-core-evidence-public-status.sh
```

Current evidence chain

The current Seal evidence report records the following report-only metadata chain:

```
seal_agentic_automation_metadata_present=1
seal_parameter_schema_metadata_present=1
seal_request_freshness_metadata_present=1
seal_signed_request_metadata_present=1
seal_policy_decision_metadata_present=1
seal_runtime_gate_metadata_present=1
```

Core blocked-request case set

The completed core case evidence set covers:

```
unknown_tool_case_validated=1
unsigned_request_case_validated=1
stale_request_case_validated=1
replayed_request_case_validated=1
core_blocked_case_set_complete=1
```

These cases are represented as report-only blocked-request evidence for AI-era tool-boundary planning.

Operator-facing status surface

Current status-surface posture:

```
seal_core_evidence_report_present=1
seal_core_evidence_public_status_present=1
seal_core_evidence_status_surface_present=1
operator_visible_status_surface=1
deterministic_local_report_path=1
core_blocked_case_set_complete=1
```

```
mcp_alignment_context=ai-era-tool-boundary-planning
runtime_gate_report_only=1
runtime_authority_granted=0
effect_performed=0
host_read_performed=0
host_write_performed=0
network_performed=0
runtime_enforcement_implemented=0
policy_enforcement_implemented=0
tool_execution_implemented=0
ai_agent_security_claimed=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Public claim boundary

The careful current public claim remains:

```
Latticra Seal now has a report-only runtime gate path with core negative-test evidence for
AI-era tool-boundary planning.
```

It is also accurate to say:

```
Latticra Seal is building an evidence-bound trust boundary for AI-era automation.
```

It is not yet accurate to claim production AI-agent security, runtime enforcement, tool execution control, host protection, network protection, Fedora approval, external endorsement, or production readiness.

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-core-evidence-status.sh
```

The underlying report remains covered by:

```
sh scripts/test-latticra-seal-core-evidence-report.sh
sh scripts/test-latticra-seal-core-evidence-public-status.sh
```

Expected output:

```
latticra seal core evidence status: ok
```

Boundary

This status record is documentation/status alignment only.

It does not change runtime behavior, add enforcement, execute tools, perform effects, read from the host, write to the host, perform network operations, grant authority, or claim production security capability.

Current next valid slice

The next valid Latticra Seal slice is a guarded policy-decision status surface or status-index alignment that preserves the report-only posture.

A future runtime-enforcement slice must not begin until the project has a specific contract, deterministic local fixture, no-effect dry-run report, guarded allowlist posture, and validation path showing exactly what authority would be denied or allowed and why.

docs/status/SEAL_CRYPTO_GRADUATION_GATE_STATUS.md

Source title: Latticra Seal Crypto Graduation Gate Status

Lines: 91 | Words: 207 | SHA-256: efd9bc3d88ca99896d530817148fbbb630541a2c1cec0897e8d59b1bf8fd0048

Latticra Seal Crypto Graduation Gate Status

Status: status record for the Latticra Seal crypto graduation gate Date: 2026-05-26

Scope

This status record tracks the authority-neutral crypto graduation gate over the existing local Ed25519 verify-only result and verified receipt promotion metadata.

It does not add signing, key generation, key storage, private-key handling, trust-store loading, revocation lookup, network lookup, FIPS validation, CMVP submission, production cryptography claims, capability enforcement, effect execution, host behavior, or runtime authority.

network_lookup_allowed=0
authority_usable=0
authority_promotion_allowed=0
capability_gate_allowed=0
runtime_authority_granted=0
gate_state=graduated-authority-neutral
blocked_reason=authority-remains-denied
status=crypto-graduation-gate-passed
```

Validation

```
sh scripts/test-latticra-seal-crypto-graduation-gate.sh
```

Expected output:

```
seal crypto graduation gate invariants: ok
```

```
latticra seal crypto graduation gate: ok
```

Notes

This gate makes the current local cryptographic verification checkpoint stricter and easier to promote later. It is still authority-neutral: a passing gate records standard expectations and local verification evidence, but it does not make the receipt usable for capability enforcement, effect execution, or runtime authority.

docs/status/SEAL_CRYPTO_VERIFY_BACKEND_STATUS.md

Source title: Latticra Seal Crypto Verify Backend Status

Lines: 120 | Words: 312 | SHA-256: 33f37bd37e5f2dcfc1cd1a213f8fa66613cd3e4e2feb6c13a15b799c75ed4c71

Latticra Seal Crypto Verify Backend Status

Status: status record for the Latticra Seal crypto verify backend metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal crypto verify backend contract and metadata implementation. This record does not implement cryptographic verification, signing, key generation, private-key storage, public-key trust stores, network trust lookup, revocation lookup, object sealing, capability enforcement, runtime authority, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal crypto verify backend metadata layer visible from public entry points.

The backend layer is important because it records a future cryptographic-verification boundary without treating metadata as authority.

It remains metadata-only, unsupported, and no-effect.

```
seal crypto verify backend status: ok
seal crypto verify backend invariants: ok
```

Boundary

This status record is documentation/status alignment only.

It does not add real cryptographic verification, signing, key generation, private-key handling, trust-store behavior, revocation lookup, object sealing, capability enforcement, effect execution, runtime behavior, host behavior, network behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this documentation/status-only alignment.

The next valid Latticra Seal slice is Ed25519 verify-only implementation status/public-entry alignment or another narrow status/index alignment follow-up.

docs/status/SEAL_ED25519_VERIFY_STATUS.md

Source title: Latticra Seal Ed25519 Verify Status

Lines: 125 | Words: 332 | SHA-256: a1e4882c9763ab8950ef49336acdaa26145711dc5ace466c1f7e6423f983c8c1

Latticra Seal Ed25519 Verify Status

Status: status record for the Latticra Seal Ed25519 verify-only result surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal Ed25519 verify-only contract and local implementation. This record does not add signing, key generation, private-key storage, public-key trust stores, network trust lookup, revocation lookup, object sealing, capability enforcement, runtime authority, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal local Ed25519 verify-only implementation visible from public entry points.

The verify-only layer is important because it is the first local cryptographic operation in the Seal lane, while still refusing to treat a successful verification result as authority by itself.

```

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-ed25519-verify-status.sh
```

The underlying implementation remains covered by:

```
sh scripts/test-latticra-seal-ed25519-verify.sh
```

Expected output:

```
seal ed25519 verify status: ok
seal ed25519 verify invariants: ok
```

Boundary

This status record is documentation/status alignment only.

The local Ed25519 verify-only implementation verifies caller-provided message, public-key, and signature bytes through OpenSSL EVP, but a successful result remains authority-neutral.

It does not add signing, key generation, private-key handling, trust-store behavior, revocation lookup, object sealing, capability enforcement, effect execution, runtime behavior, host behavior, network behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this status/public-entry alignment.

The next valid Latticra Seal slice is verified receipt promotion status/public-entry alignment or another narrow status/index alignment follow-up.

docs/status/SEAL_EFFECT_DECISION_STATUS.md

Source title: Latticra Seal Effect Decision Status

Lines: 180 | Words: 539 | SHA-256: 2057fcfee7bb8804df808f93730a0994a9e3c312792741f35d0dc1bce998ef44

Latticra Seal Effect Decision Status

Status: status record for Latticra Seal effect decision metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal effect decision implementation. This record does not add effect execution, capability enforcement, runtime authority, runtime handoff execution, cryptographic verification, verified receipt authority, signing, public-key byte verification, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, object sealing, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal effect decision metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, denied-by-gate, effect-not-allowed, effect-not-performed, host-inactive, network-inactive, runtime-authority-denied, and no-effect.

seal runtime handoff status: ok
seal capability gate status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the effect decision status guard workflow and records the guarded capability gate status predecessor without changing the metadata-only denied effect decision implementation.

It does not add effect execution, capability enforcement, runtime authority, runtime handoff execution, cryptographic verification, verified receipt authority, signing, public-key byte verification, public-key trust-store behavior, key material loading, private-key handling, key generation, hardware-key use, revocation lookup, signer invocation behavior, signer process execution, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is runtime handoff status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must not add runtime execution, effect execution, capability enforcement, runtime authority, cryptographic verification, verified receipt authority, signing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, revocation lookup, signer invocation behavior, host behavior, network behavior, object sealing, or kernel behavior unless separately implemented and guarded.

docs/status/SEAL_GUARDED_ALLOWLIST_PUBLIC_ENTRYPOINT_ALIGNMENT.md

Source title: Latticra Seal Guarded Allowlist Public Entrypoint Alignment

Lines: 110 | Words: 394 | SHA-256: 95be6798d16e0e39cbbcdebc0a1b419fd5939ac45b6c02f723292c12e855cde4

Latticra Seal Guarded Allowlist Public Entrypoint Alignment

Status: public-entrypoint alignment record for the Latticra Seal guarded allowlist milestone Source: PR #315 Scope: README/public-entrypoint alignment after the completed Latticra Seal guarded allowlist status-index alignment. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This record makes the completed Seal guarded allowlist lane visible from the root README public entrypoint.

The purpose is to keep public project readers aligned with the current Seal state without claiming enforcement, production readiness, MCP implementation, AI-agent security, or operational authority.

Reviewed files

Current Seal summary

The public README now presents Seal as a report-only guarded allowlist lane:

```
guarded allowlist contract present
guarded allowlist implementation plan present
guarded allowlist implementation present
guarded allowlist report surface present
guarded allowlist report surface status present
guarded allowlist status-index alignment present
operator-visible guarded allowlist report present
known fixture tool candidate-only posture present
runtime authority remains denied
```

The lane remains no-effect and report-only.

Validation

This public-entrypoint alignment is covered by:

```
sh scripts/test-latticra-seal-guarded-allowlist-public-entrypoint-alignment.sh
```

The underlying Seal guarded allowlist checkpoint remains covered by:

```
sh scripts/test-latticra-seal-guarded-allowlist.sh
```

```
sh scripts/test-latticra-seal-guarded-allowlist-report-surface.sh
sh scripts/test-latticra-seal-guarded-allowlist-report-surface-status.sh
sh scripts/test-latticra-seal-guarded-allowlist-status-index-alignment.sh
```

Expected output:

```
latticra seal guarded allowlist public entrypoint alignment: ok
```

Boundary

This record is documentation/public-entrypoint alignment only.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, freshness validation, replay detection, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is a capability metadata contract.

That future slice must remain contract-only and must not perform effects, execute tools, touch host state, use the network, or grant runtime authority.

docs/status/SEAL_GUARDED_ALLOWLIST_REPORT_SURFACE_STATUS.md

Source title: Latticra Seal Guarded Allowlist Report Surface Status

Lines: 112 | Words: 319 | SHA-256: 2dc6bf65e7062bfb262ace0a342bbff9e46a042cf426f0e97731a737e83eedfb

Latticra Seal Guarded Allowlist Report Surface Status

Status: status record for the Latticra Seal guarded allowlist report surface Source: PR #312 Scope: status alignment after the deterministic local report surface for Latticra Seal guarded allowlist metadata. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This status record makes the Seal guarded allowlist report surface visible as a current project checkpoint.

The report surface renders the no-effect allowlist candidate denial posture from a deterministic local fixture.

Reviewed files

```

Validation

This report surface is covered by:

```
sh scripts/test-latticra-seal-guarded-allowlist-report-surface.sh
```

This status record is covered by:

```
sh scripts/test-latticra-seal-guarded-allowlist-report-surface-status.sh
```

The underlying guarded allowlist implementation remains covered by:

```
sh scripts/test-latticra-seal-guarded-allowlist.sh
```

Expected output:

```
latticra seal guarded allowlist report surface status: ok
```

Boundary

This status record is documentation/status alignment only.

It does not add runtime behavior, policy behavior, protocol behavior, host behavior, network behavior, model behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is guarded allowlist status-index alignment.

That future slice must preserve the no-effect posture and must not perform effects or grant authority.

docs/status/SEAL_GUARDED_ALLOWLIST_STATUS_INDEX_ALIGNMENT.md

Source title: Latticra Seal Guarded Allowlist Status Index Alignment

Lines: 130 | Words: 420 | SHA-256: 7bcd9f511bcb6c3bd309856cd41fbac2ecfff91761580ed4817cb81e0c18ad0a

Latticra Seal Guarded Allowlist Status Index Alignment

Status: index alignment record for the Latticra Seal guarded allowlist report surface status Source: PR #313 Scope: documentation/status index alignment after the Latticra Seal guarded allowlist report surface status record. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This record keeps the completed Seal guarded allowlist report surface status visible as the current Seal status-index alignment checkpoint.

The purpose is to preserve the current evidence chain:

```
guarded allowlist contract -&gt; guarded allowlist implementation plan -&gt; guarded allowlist
implementation -&gt; guarded allowlist report surface -&gt; guarded allowlist report surface
status -&gt;
 status index alignment
```

agent_execution_added=0
tool_execution_added=0
cryptographic_enforcement_added=0
capability_enforcement_added=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Current status summary

The Seal guarded allowlist lane is now represented as:

```
guarded allowlist contract present
guarded allowlist implementation plan present
guarded allowlist implementation present
guarded allowlist report surface present
guarded allowlist report surface status present
guarded allowlist status index alignment record present
```

The lane remains report-only and no-effect.

The current guarded allowlist report posture is still:

```
requested_tool_known=1
requested_tool_candidate=1
requested_tool_allow_candidate=1
allow_candidate_grants_authority=0
allow_candidate_executes_tool=0
allow_candidate_reads_host=0
allow_candidate_writes_host=0
allow_candidate_uses_network=0
would_allow=0
would_deny=1
would_require_operator_review=1
blocked_reason=known-tool-candidate-still-denied
report_only=1
mode=report-only
status=guarded-allowlist-metadata
```

Validation

This index alignment is covered by:

```
sh scripts/test-latticra-seal-guarded-allowlist-status-index-alignment.sh
```

The underlying Seal guarded allowlist checkpoint remains covered by:

```
sh scripts/test-latticra-seal-guarded-allowlist.sh
sh scripts/test-latticra-seal-guarded-allowlist-report-surface.sh
sh scripts/test-latticra-seal-guarded-allowlist-report-surface-status.sh
```

Expected output:

```
latticra seal guarded allowlist status index alignment: ok
```

Boundary

This record is documentation/status index alignment only.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, freshness validation, replay detection, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is a public entry-point refresh for the completed guarded allowlist milestone.

That future slice must preserve the no-effect posture and must not perform effects or grant authority.

docs/status/SEAL_KEY_HANDLING_STATUS.md

Source title: Latticra Seal Key-Handling Status

Lines: 174 | Words: 477 | SHA-256: af666d88c9ed575880b788b5e4b425a8ceddb2206597b183337bc8b4097473f6

Latticra Seal Key-Handling Status

Status: status record for Latticra Seal key-handling metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal key-handling implementation. This record does not implement public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, signing, signature verification, signer invocation behavior, signer process execution, object sealing, runtime handoff execution, runtime authority, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal key-handling metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, unsigned, key-material-not-loaded, key-not-parsed, signer-not-invoked, and no-effect.

Validation

The implementation and status surface are covered by:

```
sh scripts/test-latticra-seal-key-handling-contract.sh
sh scripts/test-latticra-seal-key-handling.sh
sh scripts/test-latticra-seal-key-handling-status.sh
sh scripts/test-latticra-seal-key-material-contract.sh
```

The predecessor signing operation implementation remains covered by:

```
sh scripts/test-latticra-seal-signing-operation-contract.sh
sh scripts/test-latticra-seal-signing-operation.sh
sh scripts/test-latticra-seal-signing-operation-status.sh
```

Expected output:

```
seal key-handling contract: ok
seal key-handling invariants: ok
seal key-handling status: ok
seal key-material contract: ok
seal signing operation contract: ok
seal signing operation invariants: ok
seal report envelope status: ok
```

```
seal signature request status: ok
seal signing authorization status: ok
seal signer handoff status: ok
seal signer invocation status: ok
seal signing operation status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds an explicit status guard workflow and records the signing-operation status predecessor without changing the key-handling implementation.

It does not add public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, revocation lookup, signing, verification, signer invocation behavior, signer process execution, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is key-material status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must not add public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, signing, verification, signer invocation behavior, host behavior, network behavior, runtime authority, capability enforcement, object sealing, or kernel behavior unless separately implemented and guarded.

docs/status/SEAL_KEY_MATERIAL_STATUS.md

Source title: Latticra Seal Key-Material Status

Lines: 180 | Words: 489 | SHA-256: c0ea8c0ac09042f4b0042c65525bd20574eece576cc236c593af0758e7026f32

Latticra Seal Key-Material Status

Status: status record for Latticra Seal key-material metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal key-material implementation. This record does not implement public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, signing, signature verification, signer invocation behavior, signer process execution, object sealing, runtime handoff execution, runtime authority, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal key-material metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, unsigned, key-material-not-loaded, key-not-parsed, signer-not-invoked, and no-effect.

seal key-handling status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the key-material status guard workflow and records the guarded key-handling status predecessor without changing the key-material implementation.

It does not add public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, revocation lookup, signing, verification, signer invocation behavior, signer process execution, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is public-key parsing status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must not add public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, signing, verification, signer invocation behavior, host behavior, network behavior, runtime authority, capability enforcement, object sealing, or kernel behavior unless separately implemented and guarded.

docs/status/SEAL_KEY_PARSING_STATUS.md

Source title: Latticra Seal Key Parsing Status

Lines: 194 | Words: 544 | SHA-256: 43125acbc136e5e140a782b45f0587a64a42239f6c0758176628a1b368665557

Latticra Seal Key Parsing Status

Status: status record for Latticra Seal key parsing metadata Source: local follow-up slice Scope: status and public-entry alignment after the bounded no-effect Seal key parsing implementation. This record does not add key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, signing, signature verification, signer invocation behavior, signer process execution, object sealing, runtime handoff execution, runtime authority, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal key parsing metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, caller-provided-public-key-only, key-material-not-loaded, private-key-denied, signer-not-invoked, and no-effect.

```

Boundary

This status record is documentation/status alignment only.

This refresh adds the key parsing status guard workflow and records the guarded public-key parsing status predecessor without changing the bounded key parsing metadata implementation.

It does not add key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, revocation lookup, signing, verification, signer invocation behavior, signer process execution, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is verification policy status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must not add runtime execution, effect execution, capability enforcement, runtime authority, cryptographic verification, verified receipt authority, signing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, revocation lookup, signer invocation behavior, host behavior, network behavior, object sealing, or kernel behavior unless separately implemented and guarded.

Source title: Latticra Seal Operator Receipt Report Status

Lines: 178 | Words: 536 | SHA-256: ed5c5523e9c312cf5de7d6e34ed37adac1e31b49221d81c61f1e1b921ecdb1ad

Latticra Seal Operator Receipt Report Status

Status: status record for the Latticra Seal operator receipt report surface Scope: status alignment after the deterministic local report surface for Latticra Seal operator receipt metadata. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This status record makes the Seal operator receipt report surface visible as a current product checkpoint.

The report surface renders one denied local receipt that binds existing report-only Seal metadata without granting authority or performing effects.

sh scripts/test-latticra-seal-operator-receipt-report-surface.sh
```

This status record is covered by:

```
sh scripts/test-latticra-seal-operator-receipt-report-status.sh
```

The underlying operator receipt report implementation remains covered by:

```
sh scripts/test-latticra-seal-operator-receipt-report.sh
```

Expected output:

```
seal report envelope status: ok
seal signature request status: ok
seal signing authorization status: ok
seal signer handoff status: ok
seal signer invocation status: ok
seal signing operation status: ok
seal key-handling status: ok
seal key-material status: ok
seal public-key parsing status: ok
seal key parsing status: ok
seal verification policy status: ok
seal verification receipt status: ok
seal capability gate status: ok
seal effect decision status: ok
seal runtime handoff status: ok
seal status rollup status: ok
seal agentic automation security status: ok
seal parameter schema status: ok
seal request freshness status: ok
seal signed request status: ok
latticra seal policy decision status: ok
latticra seal operator receipt report status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the operator receipt report status guard workflow and records the guarded policy decision status predecessor without changing the report-only operator receipt metadata, implementation, or report surface.

It does not add runtime behavior, policy behavior, protocol behavior, host behavior, network behavior, model behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current Next Valid Slice

The local capability registry schema contract is now represented by docs/LATTICRA_SEAL_LOCAL_CAPABILITY_REGISTRY_SCHEMA_CONTRACT.md.

The local capability registry schema implementation plan is now represented by docs/LATTICRA_SEAL_LOCAL_CAPABILITY_REGISTRY_SCHEMA_IMPLEMENTATION_PLAN.md.

The local capability registry schema implementation is now represented by docs/LATTICRA_SEAL_LOCAL_CAPABILITY_REGISTRY_SCHEMA_IMPLEMENTATION.md.

The next valid Latticra Seal slice is a deterministic local capability registry schema report surface or a Panel-visible Seal dashboard planning checkpoint.

That future slice must preserve the no-effect posture and must not perform effects or grant authority.

docs/status/SEAL_PARAMETER_SCHEMA_STATUS.md

Source title: Latticra Seal Parameter Schema Status

Lines: 209 | Words: 607 | SHA-256: 61c7efa01890eabc96e3a152c19729b6e8f41f477a4b0dc572c718b3d9b7f81e

Latticra Seal Parameter Schema Status

Status: status record for Latticra Seal parameter schema metadata Source: local follow-up slice Scope: status and public-entry alignment after the report-only Latticra Seal parameter schema contract, metadata implementation, and report surface. This record does not implement schema parsing, schema validation, runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipts, public-key parsing, public-key trust stores, key generation, private-key storage, hardware key use, network trust lookup, revocation lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This status record makes the completed Seal parameter schema checkpoint visible from public entry points.

The purpose is to keep public project readers aligned with the current report-only parameter schema posture without claiming schema parsing, schema validation, enforcement, production readiness, MCP implementation, AI-agent execution control, model execution, tool execution, shell execution, or operational authority.

seal runtime handoff status: ok
seal status rollup status: ok
seal agentic automation security status: ok
seal parameter schema status: ok
```

Boundary

This status record is documentation/status/public-entry alignment only.

This refresh adds the parameter schema status guard workflow and records the guarded agentic automation security status predecessor without changing the report-only parameter schema metadata, implementation, or report surface.

It does not add schema parsing, schema validation, MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is request freshness status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

docs/status/SEAL_POLICY_DECISION_PUBLIC_ENTRYPOINT_ALIGNMENT.md

Source title: Latticra Seal Policy Decision Public-Entrypoint Alignment

Lines: 211 | Words: 518 | SHA-256: 8e24273af9ac0b26233ecc3e881c4c49d5bb08f423a2fae7e7353b14dbe0bef3

Latticra Seal Policy Decision Public-Entrypoint Alignment

Status: public-entrypoint alignment record for the Latticra Seal policy decision checkpoint Source: local follow-up slice Scope: status and public-entry alignment after the report-only Latticra Seal policy decision contract, metadata implementation, status record, report surface, and report surface status. This record does not implement real policy evaluation, policy enforcement, runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, public-key parsing, trust-store loading, key generation, private-key storage, hardware key use, revocation lookup, network trust lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This public-entrypoint alignment makes the completed Seal policy decision checkpoint visible from README, root status, the status index, the foundation index, and project notes.

The purpose is to keep public project readers aligned with the current report-only default-deny policy decision posture without claiming real policy evaluation, policy enforcement, runtime enforcement, production readiness, MCP implementation, AI-agent execution control, model execution, tool execution, shell execution, or operational authority.

```

Expected output:

```
seal policy decision public entrypoint alignment: ok
```

Boundary

This alignment record is documentation/status/public-entry alignment only.

It does not add real policy evaluation, policy enforcement, runtime enforcement, runtime behavior, effect execution, host behavior, network behavior, MCP behavior, model behavior, AI-agent behavior, tool behavior, shell behavior, cryptographic behavior, signature verification, freshness validation, replay detection, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is defensive threat model validation refinement.

That future slice must preserve the no-effect posture and must not implement runtime execution, effect execution, capability enforcement, cryptographic verification, signing, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, shell execution, or runtime authority.

docs/status/SEAL_POLICY_DECISION_REPORT_SURFACE_STATUS.md

Source title: Latticra Seal Policy Decision Report Surface Status

Lines: 108 | Words: 338 | SHA-256: a4aa4ff17d191b8f7e0c289dba31a1c9fc57bc6373eab3b28c9270e802bb9d46

Latticra Seal Policy Decision Report Surface Status

Status: status record for the Latticra Seal policy decision report surface Source: PR #300 Scope: status alignment after the deterministic local report surface for Latticra Seal policy decision metadata. This record does not implement policy evaluation, policy enforcement, runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, signature verification, host reads, host writes, network behavior, MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This status record makes the Seal policy decision report surface visible as a current project checkpoint.

The report surface renders the default-deny, report-only policy decision posture from a deterministic local fixture.

Reviewed files

reason=policy-decision-metadata-only
status=policy-decision-metadata
```

Validation

This report surface is covered by:

```
sh scripts/test-latticra-seal-policy-decision-report-surface.sh
```

This status record is covered by:

```
sh scripts/test-latticra-seal-policy-decision-report-surface-status.sh
```

The underlying policy decision implementation remains covered by:

```
sh scripts/test-latticra-seal-policy-decision-contract.sh
sh scripts/test-latticra-seal-policy-decision.sh
sh scripts/test-latticra-seal-policy-decision-status.sh
```

Expected output:

```
latticra seal policy decision report surface status: ok
```

Boundary

This status record is documentation/status alignment only.

It does not add runtime behavior, policy behavior, protocol behavior, host behavior, network behavior, model behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is policy-decision report status-index alignment or a no-effect dry-run planning contract for future runtime behavior.

That future slice must preserve the report-only posture until a specific contract, deterministic local fixture, no-effect dry-run report, guarded allowlist posture, and validation path justify any later runtime work.

docs/status/SEAL_POLICY_DECISION_STATUS.md

Source title: Latticra Seal Policy Decision Status

Lines: 200 | Words: 609 | SHA-256: d8f3b051a6d19d86598858f15ce2f64a195dc423b606ef0dd920bd0ad2d82340

Latticra Seal Policy Decision Status

Status: status record for the Latticra Seal report-only policy decision metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the report-only Seal policy decision metadata implementation and deterministic policy decision report surface. This record does not implement policy evaluation, policy enforcement, runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, signature verification, public-key parsing, trust-store loading, key generation, private-key storage, hardware key use, revocation lookup, network trust lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This status record makes the Seal policy decision metadata layer and its deterministic report surface visible from public entry points.

The policy decision layer is important because it records the default-deny decision posture that sits before the report-only runtime gate path.

It remains metadata-only and no-effect.

runtime_authority_granted=0
host_read_performed=0
host_write_performed=0
network_performed=0
mode=report-only
decision=report-only
reason=policy-decision-metadata-only
```

Relationship to the core evidence milestone

The completed Seal core evidence milestone depends on this policy-decision posture as part of the report-only metadata chain:

```
seal_policy_decision_metadata_present=1
policy_decision_predecessor_signed_request_status_present=1
runtime_gate_report_only=1
core_blocked_case_set_complete=1
mode=status-public-entry-alignment
policy_decision_status_added=1
implementation_behavior_changed=0
real_policy_evaluation_added=0
policy_enforcement_added=0
runtime_execution_added=0
effect_execution_added=0
host_behavior_changed=0
network_behavior_changed=0
mcp_behavior_changed=0
agent_execution_added=0
model_execution_added=0
tool_execution_added=0
shell_execution_added=0
cryptographic_enforcement_added=0
capability_enforcement_added=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

The current policy-decision status explains why the later core blocked-request evidence remains denied and report-only.

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-policy-decision-status.sh
```

The underlying policy decision implementation remains covered by:

```
sh scripts/test-latticra-seal-policy-decision-contract.sh
sh scripts/test-latticra-seal-policy-decision.sh
sh scripts/test-latticra-seal-policy-decision-report-surface.sh
sh scripts/test-latticra-seal-policy-decision-report-surface-status.sh
```

Expected output:

```
seal report envelope status: ok
seal signature request status: ok
seal signing authorization status: ok
seal signer handoff status: ok
seal signer invocation status: ok
seal signing operation status: ok
seal key-handling status: ok
seal key-material status: ok
seal public-key parsing status: ok
seal key parsing status: ok
seal verification policy status: ok
seal verification receipt status: ok
seal capability gate status: ok
seal effect decision status: ok
seal runtime handoff status: ok
seal status rollup status: ok
seal agentic automation security status: ok
seal parameter schema status: ok
seal request freshness status: ok
```

```
seal signed request status: ok
latticra seal policy decision status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the policy decision status guard workflow and records the guarded signed request status predecessor without changing the report-only policy decision metadata, implementation, or report surface.

It does not add policy evaluation, policy enforcement, runtime enforcement, runtime behavior, host behavior, network behavior, MCP behavior, model behavior, AI-agent behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this documentation/status-only alignment.

The next valid Latticra Seal slice is operator receipt report status/workflow guard alignment or another small guarded report/status alignment.

That future slice must preserve the no-effect posture and must not implement receipt file writes, tool execution, policy enforcement, capability enforcement, cryptographic verification, runtime execution, host behavior, network behavior, MCP behavior, AI agent execution, model execution, shell execution, or authority grants.

docs/status/SEAL_PRODUCT_SPINE_STATUS.md

Source title: Latticra Seal Product Spine Status

Lines: 95 | Words: 303 | SHA-256: f32e1514b4c76a20f4413bfa6324b81b8dd7aeadfc8258deb37556a385e2030f

Latticra Seal Product Spine Status

Status: status record for the Latticra Seal product spine Scope: status alignment after the Latticra Seal product spine document. This record does not implement runtime enforcement, malware prevention, ransomware prevention, sandboxing, endpoint detection, kernel enforcement, network authority, root authority, cloud trust services, production cryptographic authority, capability enforcement, effect execution, AI-agent execution control, or production security readiness.

Purpose

This status record makes the Seal product spine visible as a current project checkpoint.

The product spine defines the earned path from report-only evidence toward future verify, decide, handoff, and enforcement modes without changing current authority.

Reviewed files

```
docs/latticra-seal/PRODUCT.md
docs/latticra-seal/README.md
docs/latticra-seal/STATUS.md

runtime_authority_granted=0
```

Product modes

The current product-spine document records:

```
observe_mode=current
verify_mode=partial-local
decide_mode=metadata-only
handoff_mode=metadata-only
enforce_mode=future-closed
```

Validation

The product spine is covered by:

```
sh scripts/test-latticra-seal-docs.sh
```

This status record is covered by:

```
sh scripts/test-latticra-seal-product-spine-status.sh
```

Expected output:

```
latticra seal product spine status: ok
```

Boundary

This status record is documentation/status alignment only.

It does not add runtime behavior, policy behavior, protocol behavior, host behavior, network behavior, model behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

The bundled operator receipt report contract, implementation plan, implementation, report surface, and status record are now current follow-up checkpoints.

The local capability registry schema contract, implementation plan, and no-effect implementation are now current follow-up checkpoints.

The next valid Latticra Seal slice is a deterministic local capability registry schema report surface or a Panel-visible Seal dashboard planning checkpoint.

That future slice must preserve the no-effect posture and must not perform effects or grant authority.

docs/status/SEAL_PUBLIC_KEY_PARSING_STATUS.md

Source title: Latticra Seal Public-Key Parsing Status

Lines: 234 | Words: 606 | SHA-256: b6c8d47ea2efa38514cd7865d9379d6468b4f8c12db46adf2d4c60cd7439717b

Latticra Seal Public-Key Parsing Status

Status: status record for Latticra Seal public-key parsing metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal public-key parsing implementation. This record does not implement public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, signing, signature verification, signer invocation behavior, signer process execution, object sealing, runtime handoff execution, runtime authority, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal public-key parsing metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, unsigned, public-key-not-parsed, key-material-not-loaded, signer-not-invoked, and no-effect.

seal key-material status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the public-key parsing status guard workflow and records the guarded key-material status predecessor without changing the public-key parsing implementation.

It does not add public-key parsing, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, revocation lookup, signing, verification, signer invocation behavior, signer process execution, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is key parsing status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must not add runtime execution, effect execution, cryptographic verification, signing, public-key parsing behavior, key material loading, private-key handling, key generation, hardware-key use, trust-store behavior, signer invocation behavior, host behavior, network behavior, runtime authority, capability enforcement, object sealing, or kernel behavior unless separately implemented and guarded.

docs/status/SEAL_README_STATUS_ROW_ALIGNMENT.md

Source title: Latticra Seal README Status Row Alignment

Lines: 72 | Words: 263 | SHA-256: 21e46643eb37e8a134aaa39e1d917f51c70c5c1f79c2f8cd99ad70a3c0325f07

Latticra Seal README Status Row Alignment

Status: README/status alignment record for the current Latticra Seal public summary Date: 2026-05-25 CDT Scope: README compact status row and Seal current-posture summary alignment with the existing Latticra Seal status checkpoint. This record does not implement runtime execution, effect execution, capability enforcement, cryptographic verification, signing, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, shell execution, production enforcement, public-readiness promotion, security-hardening implementation, or runtime authority.

Purpose

The detailed README evidence flags and status index already record the current Seal chain.

This alignment updates the first README Seal summary surfaces so they no longer stop at bounded key parsing while later status records already include verification policy, verification receipt, denied capability gate, denied effect decision, inactive runtime handoff, status rollup, agentic automation security, parameter schema, request freshness, signed request, and policy decision report/public-entry surfaces.

Alignment Fields

```
seal_readme_status_row_alignment_present=1
readme_seal_row_mentions_runtime_gate_path=1

tool_execution_added=0
shell_execution_added=0
security_hardening_changed=0
public_readiness_changed=0
production_enforcement_added=0
runtime_authority_granted=0
estimate_adjustment_required=0
```

Boundary

This is a wording and public-entry alignment only.

It does not add policy evaluation, policy enforcement, runtime enforcement, effect execution, cryptographic verification, signing, key loading, host access, network access, MCP protocol behavior, AI-agent execution control, model execution, tool execution, shell execution, production enforcement, or runtime authority.

The current next Seal lane remains small guarded report/status alignment only when drift appears.

Validation

This alignment is guarded by:

```
sh scripts/test-latticra-seal-readme-status-row-alignment.sh
```

Expected output:

```
latticra_seal_readme_status_row_alignment: ok
```

docs/status/SEAL_REPORT_ENVELOPE_STATUS.md

Source title: Latticra Seal Report Envelope Status

Lines: 137 | Words: 376 | SHA-256: 2d39d9a53b9e256394055a4b75c68070c367015362e6521569c2fd4cd4ed2bd4

Latticra Seal Report Envelope Status

Status: status record for the Latticra Seal sealed report-envelope metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal report envelope contract and metadata implementation. This record does not add cryptographic signing, signature verification, private-key handling, key generation, trust-store loading, revocation lookup, runtime handoff execution, runtime authority, host effects, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal report envelope implementation visible from public entry points.

The envelope layer consumes ready runtime handoff report metadata and classifies a narrow local metadata-only envelope posture. It is envelope classification metadata, not signing and not runtime handoff.

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-report-envelope-status.sh
```

The underlying implementation remains covered by:

```
sh scripts/test-latticra-seal-report-envelope.sh
```

Expected output:

```
seal report envelope status: ok
seal report envelope invariants: ok
```

Boundary

This status record is documentation/status alignment only.

The report envelope implementation accepts ready runtime handoff report metadata and produces deterministic sealed envelope metadata. A successful envelope may set envelope_ready=1 and envelope_state=sealed-report-only, but it remains metadata-only, unsigned, object-unsealed, and authority-neutral.

It does not add cryptographic signing, signature verification, private-key handling, key generation, trust-store behavior, revocation lookup, object sealing, runtime handoff execution, capability enforcement, effect execution, host behavior, network behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this status/public-entry alignment.

The next downstream Latticra Seal checkpoint is the signature request status/public-entry alignment or another narrow status/index alignment follow-up. Any future work must remain no-signing unless separately contracted, implemented, and guarded.

docs/status/SEAL_REQUEST_FRESHNESS_STATUS.md

Source title: Latticra Seal Request Freshness Status

Lines: 215 | Words: 654 | SHA-256: 04bd4100649815de2f9b8893b6322a0dbf909868a8ae921ed8a9d9879c435488

Latticra Seal Request Freshness Status

Status: status record for Latticra Seal request freshness metadata Source: local follow-up slice Scope: status and public-entry alignment after the report-only Latticra Seal request freshness contract, metadata implementation, and report surface. This record does not implement timestamp parsing, trusted clock behavior, nonce storage, replay-cache storage, context hashing, parameter hashing, freshness validation, replay detection, signature verification, runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipts, public-key parsing, public-key trust stores, key generation, private-key storage, hardware key use, network trust lookup, revocation lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This status record makes the completed Seal request freshness checkpoint visible from public entry points.

The purpose is to keep public project readers aligned with the current report-only freshness/replay posture without claiming timestamp parsing, trusted clocks, nonce persistence, replay protection, freshness validation, enforcement, production readiness, MCP implementation, AI-agent execution control, model execution, tool execution, shell execution, or operational authority.

seal parameter schema status: ok
seal request freshness status: ok
```

Boundary

This status record is documentation/status/public-entry alignment only.

This refresh adds the request freshness status guard workflow and records the guarded parameter schema status predecessor without changing the report-only request freshness metadata, implementation, or report surface.

It does not add timestamp parsing, trusted clock behavior, nonce storage, replay-cache storage, context hashing, parameter hashing, freshness validation, replay detection, signature verification, MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature generation, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is signed request status/workflow guard alignment.

That future slice must preserve the no-effect posture and must not implement signature generation, signature verification, trust-store loading, revocation lookup, signed request enforcement, real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

docs/status/SEAL_RUNTIME_DRY_RUN_PUBLIC_ENTRYPOINT_ALIGNMENT.md

Lines: 107 | Words: 388 | SHA-256: f4ea7dad67fd9feceb7b28e5fe3c20168655e4d74e342ea37847ea82d32bd4bb

Latticra Seal Runtime Dry-Run Public Entrypoint Alignment

Status: public-entrypoint alignment record for the Latticra Seal runtime dry-run milestone Source: PR #307 Scope: README/public-entrypoint alignment after the completed Latticra Seal runtime dry-run status-index alignment. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This record makes the completed Seal runtime dry-run lane visible from the root README public entrypoint.

The purpose is to keep public project readers aligned with the current Seal state without claiming enforcement, production readiness, MCP implementation, AI-agent security, or operational authority.

Reviewed files

agent_execution_added=0
tool_execution_added=0
cryptographic_enforcement_added=0
capability_enforcement_added=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Current Seal summary

The public README now presents Seal as a report-only dry-run lane:

```
policy decision metadata present
runtime gate metadata present
runtime dry-run metadata present
runtime dry-run report surface present
runtime dry-run report surface status present
runtime dry-run status-index alignment present
operator-visible runtime dry-run report present
default-deny dry-run posture present
runtime authority remains denied
```

The lane remains no-effect and report-only.

Validation

This public-entrypoint alignment is covered by:

```
sh scripts/test-latticra-seal-runtime-dry-run-public-entrypoint-alignment.sh
```

The underlying Seal runtime dry-run checkpoint remains covered by:

```
sh scripts/test-latticra-seal-runtime-dry-run.sh
sh scripts/test-latticra-seal-runtime-dry-run-report-surface.sh
sh scripts/test-latticra-seal-runtime-dry-run-report-surface-status.sh
sh scripts/test-latticra-seal-runtime-dry-run-status-index-alignment.sh
```

Expected output:

```
latticra seal runtime dry-run public entrypoint alignment: ok
```

Boundary

This record is documentation/public-entrypoint alignment only.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, freshness validation, replay detection, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is a guarded allowlist planning contract.

That future slice must be planning-only and must not perform effects, execute tools, touch host state, use the network, or grant runtime authority.

docs/status/SEAL_RUNTIME_DRY_RUN_REPORT_SURFACE_STATUS.md

Source title: Latticra Seal Runtime Dry-Run Report Surface Status

Lines: 113 | Words: 326 | SHA-256: 0ff2e0efcfd876bb5c9b3a812589e4f03e9272fa58f315625e4782ea0ecc928c

Latticra Seal Runtime Dry-Run Report Surface Status

Status: status record for the Latticra Seal runtime dry-run report surface Source: PR #305 Scope: status alignment after the deterministic local report surface for Latticra Seal runtime dry-run metadata. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This status record makes the Seal runtime dry-run report surface visible as a current project checkpoint.

The report surface renders the no-effect dry-run denial posture from a deterministic local fixture.

Reviewed files

```
docs/LATTICRA_SEAL_RUNTIME_DRY_RUN_REPORT_SURFACE.md
scripts/latticra-seal-runtime-dry-run-report.sh

status=runtime-dry-run-metadata
```

Validation

This report surface is covered by:

```
sh scripts/test-latticra-seal-runtime-dry-run-report-surface.sh
```

This status record is covered by:

```
sh scripts/test-latticra-seal-runtime-dry-run-report-surface-status.sh
```

The underlying runtime dry-run implementation remains covered by:

```
sh scripts/test-latticra-seal-runtime-dry-run.sh
```

Expected output:

```
latticra seal runtime dry-run report surface status: ok
```

Boundary

This status record is documentation/status alignment only.

It does not add runtime behavior, policy behavior, protocol behavior, host behavior, network behavior, model behavior, tool behavior, shell behavior, cryptographic behavior, capability behavior, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is runtime dry-run status-index alignment or a future guarded allowlist planning contract.

That future slice must preserve the no-effect posture and must not perform effects or grant authority.

docs/status/SEAL_RUNTIME_DRY_RUN_STATUS_INDEX_ALIGNMENT.md

Source title: Latticra Seal Runtime Dry-Run Status Index Alignment

Lines: 127 | Words: 429 | SHA-256: ccf804c7f800cfe650879cb8bceaea9211971e084b0d3738ff36a1ddb0e162f4

Latticra Seal Runtime Dry-Run Status Index Alignment

Status: index alignment record for the Latticra Seal runtime dry-run report surface status Source: PR #306 Scope: documentation/status index alignment after the Latticra Seal runtime dry-run report surface status record. This record does not implement runtime behavior, runtime execution, runtime authority, effect execution, policy enforcement, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, tool execution, AI agent execution, model execution, MCP protocol behavior, MCP server behavior, MCP client behavior, host reads, host writes, network behavior, operating-system behavior, production readiness, external endorsement, or authority grants.

Purpose

This record keeps the completed Seal runtime dry-run report surface status visible from the status index after the merged report-only dry-run implementation, report surface, and status-surface slices.

The purpose is to preserve the current evidence chain:

```
policy decision -&gt; policy decision report surface -&gt; runtime dry-run metadata -&gt;
runtime dry-run
```

```
report surface -&gt; runtime dry-run status -&gt; status index alignment
```

Reviewed files

agent_execution_added=0
tool_execution_added=0
cryptographic_enforcement_added=0
capability_enforcement_added=0
production_readiness_claimed=0
external_endorsement_claimed=0
```

Current status summary

The Seal dry-run lane is now represented as:

```
policy decision status present
policy decision report surface status present
runtime dry-run metadata present
runtime dry-run report surface present
runtime dry-run report surface status present
runtime dry-run status index alignment record present
```

The lane remains report-only and no-effect.

The current dry-run report posture is still:

```
policy_decision_state=report-only
runtime_gate_state=report-only
blocked_reason=default-deny-dry-run
default_action_deny=1
would_allow=0
would_deny=1
would_require_operator_review=1
would_execute_tool=0
would_read_host=0
would_write_host=0
would_use_network=0
would_grant_runtime_authority=0
report_only=1
mode=report-only
status=runtime-dry-run-metadata
```

Validation

This index alignment is covered by:

```
sh scripts/test-latticra-seal-runtime-dry-run-status-index-alignment.sh
```

The underlying Seal runtime dry-run checkpoint remains covered by:

```
sh scripts/test-latticra-seal-runtime-dry-run.sh
sh scripts/test-latticra-seal-runtime-dry-run-report-surface.sh
sh scripts/test-latticra-seal-runtime-dry-run-report-surface-status.sh
```

Expected output:

```
latticra seal runtime dry-run status index alignment: ok
```

Boundary

This record is documentation/status index alignment only.

It does not add MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, signature verification, freshness validation, replay detection, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is a public entry-point refresh for the completed Seal runtime dry-run milestone or a future guarded allowlist planning contract.

That future slice must preserve the no-effect posture and must not perform effects or grant authority.

docs/status/SEAL_RUNTIME_HANDOFF_EVALUATION_STATUS.md

Source title: Latticra Seal Runtime Handoff Evaluation Status

Lines: 143 | Words: 428 | SHA-256: 8396025efc04669fdd526cc72b41d6933bd3635737ffc8a2af5bb25e5d272f7c

Latticra Seal Runtime Handoff Evaluation Status

Status: status record for the Latticra Seal runtime handoff evaluation metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal runtime handoff evaluation contract and metadata implementation, now carrying crypto graduation metadata forward when present on the verified effect decision. This record does not add runtime handoff execution, effect execution, capability enforcement, runtime authority, host effects, network behavior, signing, key generation, private-key storage, public-key trust stores, network trust lookup, revocation lookup, object sealing, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal runtime handoff evaluation implementation visible from public entry points.

The evaluation consumes verified effect decision metadata and evaluates a narrow local metadata-only handoff request. When the decision carries crypto graduation metadata, the evaluation requires that evidence to remain passed, standard-aligned, and authority-neutral before allowing the metadata-only handoff classification.

It is handoff classification metadata, not runtime handoff.

```

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-runtime-handoff-evaluation-status.sh
```

The underlying implementation remains covered by:

```
sh scripts/test-latticra-seal-runtime-handoff-evaluation.sh
```

Expected output:

```
seal runtime handoff evaluation status: ok
seal runtime handoff evaluation invariants: ok
```

Boundary

This status record is documentation/status alignment only.

The runtime handoff evaluation implementation evaluates a verified effect decision record against a narrow local metadata-only handoff request. If the decision includes crypto graduation evidence, the evaluation requires crypto_graduation_gate_passed=1, standard_expectations_met=1, and authority_promotion_allowed=0. A successful evaluation may set handoff_eligible=1 and handoff_state=eligible-report-only, but it remains metadata-only and authority-neutral.

It does not add runtime handoff execution, effect execution, capability enforcement, runtime behavior, host behavior, network behavior, signing, key generation, private-key handling, trust-store behavior, revocation lookup, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this status/public-entry alignment.

The next valid Latticra Seal slice is a runtime handoff report surface from an eligible crypto-graduation-gated metadata-only runtime handoff evaluation, runtime handoff report status/public-entry alignment, or another narrow status/index alignment follow-up.

docs/status/SEAL_RUNTIME_HANDOFF_REPORT_STATUS.md

Source title: Latticra Seal Runtime Handoff Report Status

Lines: 136 | Words: 361 | SHA-256: 4c2c99c9be9dc3693ddaf2e52a0d1f506e7fd1e393fc696de794bbd580973849

Latticra Seal Runtime Handoff Report Status

Status: status record for the Latticra Seal runtime handoff report metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal runtime handoff report contract and metadata implementation. This record does not add runtime handoff execution, runtime authority, host effects, network behavior, shell execution, tool execution, capability enforcement, policy persistence, signing, key generation, private-key storage, public-key trust stores, network trust lookup, revocation lookup, object sealing, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal runtime handoff report implementation visible from public entry points.

The report layer consumes eligible runtime handoff evaluation metadata and classifies a narrow local metadata-only report request. It is report classification metadata, not runtime handoff.

```

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-runtime-handoff-report-status.sh
```

The underlying implementation remains covered by:

```
sh scripts/test-latticra-seal-runtime-handoff-report.sh
```

Expected output:

```
seal runtime handoff report status: ok
seal runtime handoff report invariants: ok
```

Boundary

This status record is documentation/status alignment only.

The runtime handoff report implementation accepts eligible runtime handoff evaluation metadata and produces deterministic report-readiness metadata. A successful report may set report_ready=1 and report_state=ready-report-only, but it remains metadata-only and authority-neutral.

It does not add runtime handoff execution, capability enforcement, effect execution, host behavior, network behavior, signing, key generation, private-key handling, trust-store behavior, revocation lookup, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this status/public-entry alignment.

The next valid Latticra Seal slice is sealed report envelope status/public-entry alignment or another narrow status/index alignment follow-up.

docs/status/SEAL_RUNTIME_HANDOFF_STATUS.md

Source title: Latticra Seal Runtime Handoff Status

Lines: 168 | Words: 475 | SHA-256: e0ed1b087a647a9a468e36a92a93c502a5c75bd6d5e5a6495ce340a8ccb364af

Latticra Seal Runtime Handoff Status

Status: status record for Latticra Seal runtime handoff metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal runtime handoff implementation. This record does not add runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipt authority, signing, public-key byte verification, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, object sealing, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal runtime handoff metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, inactive, runtime-boundary-disabled, denied-by-decision, effect-not-performed, host-inactive, network-inactive, runtime-authority-denied, and no-effect.

```

Expected output:

```
seal runtime handoff contract: ok
seal runtime handoff invariants: ok
seal runtime handoff status: ok
```

```
seal status rollup contract: ok
seal status rollup status: ok
seal effect decision status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds the runtime handoff status guard workflow and records the guarded effect decision status predecessor without changing the inactive metadata-only runtime handoff implementation.

It does not add runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipt authority, signing, public-key byte verification, public-key trust-store behavior, key material loading, private-key handling, key generation, hardware-key use, revocation lookup, signer invocation behavior, signer process execution, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is status rollup status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

docs/status/SEAL_SIGNATURE_REQUEST_STATUS.md

Source title: Latticra Seal Signature Request Status

Lines: 187 | Words: 482 | SHA-256: d42d326094c1a7e318eb3b1849eca907170a1ad46026bcddf4b568a599dae6a9

Latticra Seal Signature Request Status

Status: status record for Latticra Seal signature request metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal signature request implementation. This record does not implement signing, signature verification, key generation, private-key handling, trust-store loading, revocation lookup, object sealing, runtime handoff execution, runtime authority, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal signature request metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, unsigned, and no-effect.

sh scripts/test-latticra-seal-signer-invocation.sh
sh scripts/test-latticra-seal-signer-invocation-status.sh
```

The predecessor report-envelope implementation remains covered by:

```
sh scripts/test-latticra-seal-report-envelope.sh
sh scripts/test-latticra-seal-report-envelope-status.sh
```

Expected output:

```
seal signature request status: ok
seal signature request contract: ok
seal signature request invariants: ok
seal signing authorization contract: ok
seal signing authorization invariants: ok
seal signing authorization status: ok
seal signer handoff contract: ok
seal signer handoff invariants: ok
seal signer handoff status: ok
seal signer invocation contract: ok
seal signer invocation invariants: ok
seal signer invocation status: ok
seal report envelope invariants: ok
seal report envelope status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds an explicit status guard workflow and records the report-envelope status predecessor without changing the signature-request implementation.

It does not add signing, verification, private-key handling, key generation, trust-store behavior, revocation lookup, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is signing authorization status/workflow guard alignment or another narrow status/index alignment follow-up that still must not add signing without separate implementation, key-handling, key-material, and guard contracts.

That future slice must not add signing, verification, private-key handling, host behavior, network behavior, runtime authority, capability enforcement, object sealing, or kernel behavior unless separately implemented and guarded.

docs/status/SEAL_SIGNED_REQUEST_STATUS.md

Source title: Latticra Seal Signed Request Status

Lines: 209 | Words: 630 | SHA-256: 80e5305fe2cfce68b95e09a90cdb9a2b658d90cc641a21d6dd93c24c834e2a75

Latticra Seal Signed Request Status

Status: status record for Latticra Seal signed request metadata Source: local follow-up slice Scope: status and public-entry alignment after the report-only Latticra Seal signed request contract and metadata implementation. This record does not implement signature generation, signature verification, public-key parsing, trust-store loading, private-key handling, key generation, hardware-key use, revocation lookup, network trust lookup, signed request enforcement, runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipts, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, MCP protocol implementation, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, or operating-system behavior.

Purpose

This status record makes the completed Seal signed request metadata checkpoint visible from public entry points.

The purpose is to keep public project readers aligned with the current report-only signature metadata posture without claiming signing, signature verification, key parsing, trust-store behavior, revocation lookup, signed request enforcement, production readiness, MCP implementation, AI-agent execution control, model execution, tool execution, shell execution, or operational authority.

```

Boundary

This status record is documentation/status/public-entry alignment only.

This refresh adds the signed request status guard workflow and records the guarded request freshness status predecessor without changing the report-only signed request metadata, implementation, or status surface.

It does not add signature generation, signature verification, public-key parsing, trust-store loading, private-key handling, key generation, hardware-key use, revocation lookup, network trust lookup, signed request enforcement, MCP protocol behavior, MCP server behavior, MCP client behavior, AI agent execution, model execution, tool execution, shell execution, runtime behavior, host reads, host writes, network behavior, cryptographic verification, key handling, receipt verification, capability enforcement, policy enforcement, runtime enforcement, production readiness, external endorsement, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is policy decision status/workflow guard alignment.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

Source title: Latticra Seal Signer Handoff Status

Lines: 164 | Words: 486 | SHA-256: 767cfa7e8fb2cd2be303e933695e0475084eeb1d82b74804c964c108e1564a1f

Latticra Seal Signer Handoff Status

Status: status record for Latticra Seal signer handoff metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal signer handoff implementation. This record does not implement signing, signature verification, signer invocation, key generation, private-key handling, trust-store loading, revocation lookup, object sealing, runtime handoff execution, runtime authority, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal signer handoff metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, unsigned, signer-not-invoked, and no-effect.

seal signer handoff invariants: ok
seal signer invocation contract: ok
seal signer invocation invariants: ok
seal signer invocation status: ok
seal signing authorization contract: ok
seal signing authorization invariants: ok
seal report envelope status: ok
seal signature request status: ok
seal signing authorization status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds an explicit status guard workflow and records the signing-authorization status predecessor without changing the signer-handoff implementation.

It does not add signing, verification, signer invocation, private-key handling, key generation, trust-store behavior, revocation lookup, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is signer invocation status/workflow guard alignment or another narrow status/index alignment follow-up that still must not add signing without separate implementation, key-handling, key-material, and guard contracts.

The signer invocation metadata implementation, status/public-entry alignment, signing operation contract, signing operation metadata implementation, signing operation status/public-entry alignment, key-handling boundary contract, and key-handling metadata implementation now exist as guarded checkpoints. Future work must not add signing, verification, signer invocation behavior, private-key handling, key generation, trust-store behavior, revocation lookup, host behavior, network behavior, runtime authority, capability enforcement, object sealing, or kernel behavior unless separately implemented and guarded.

Validation

The implementation and status surface are covered by:

```
sh scripts/test-latticra-seal-signing-operation-contract.sh
sh scripts/test-latticra-seal-signing-operation.sh
sh scripts/test-latticra-seal-signing-operation-status.sh
sh scripts/test-latticra-seal-key-handling-contract.sh
sh scripts/test-latticra-seal-key-handling.sh
sh scripts/test-latticra-seal-key-handling-status.sh
```

The predecessor signer invocation implementation remains covered by:

```
sh scripts/test-latticra-seal-signer-invocation-contract.sh
sh scripts/test-latticra-seal-signer-invocation.sh
sh scripts/test-latticra-seal-signer-invocation-status.sh
```

Expected output:

```
seal signing operation contract: ok
seal signing operation invariants: ok
seal signing operation status: ok
seal key-handling contract: ok
seal key-handling invariants: ok
seal key-handling status: ok
seal signer invocation contract: ok
seal signer invocation invariants: ok
seal report envelope status: ok
seal signature request status: ok
seal signing authorization status: ok
seal signer handoff status: ok
seal signer invocation status: ok
```

Boundary

This status record is documentation/status alignment only.

This refresh adds an explicit status guard workflow and records the signer-invocation status predecessor without changing the signing-operation implementation.

It does not add signing, verification, signer invocation behavior, signer process execution, private-key handling, key generation, trust-store behavior, revocation lookup, runtime handoff execution, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is key-handling status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must not add signing, verification, signer invocation behavior, public-key parsing, private-key handling, key material loading, key generation, trust-store behavior, revocation lookup, host behavior, network behavior, runtime authority, capability enforcement, object sealing, or kernel behavior unless separately implemented and guarded.

docs/status/SEAL_STATUS_ROLLUP_STATUS.md

Source title: Latticra Seal Status Rollup Status

Lines: 182 | Words: 543 | SHA-256: f294bad8c8128fb248407a19e7e98d3212aaf35c409290ab6b480049566e7530

Latticra Seal Status Rollup Status

Status: status record for Latticra Seal status rollup metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal status rollup implementation. This record does not add runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipt authority, signing, public-key byte verification, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, object sealing, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal status rollup metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, unverified, denied-by-gate, inactive-runtime, runtime-boundary-disabled, host-inactive, network-inactive, runtime-authority-denied, and no-effect.

```

Boundary

This status record is documentation/status alignment only.

This refresh adds the status rollup status guard workflow and records the guarded runtime handoff status predecessor without changing the metadata-only status rollup implementation.

It does not add runtime execution, runtime authority, effect execution, capability enforcement, cryptographic verification, verified receipt authority, signing, public-key byte verification, public-key trust-store behavior, key material loading, private-key handling, key generation, hardware-key use, revocation lookup, signer invocation behavior, signer process execution, host reads, host writes, network behavior, shell execution, tool execution, policy persistence, object sealing, kernel behavior, production readiness, or authority grants.

Current next valid slice

The next valid Latticra Seal slice is agentic automation security status/workflow guard alignment or another narrow status/index alignment follow-up.

That future slice must preserve the no-effect posture and must not implement real policy evaluation, policy enforcement, runtime execution, effect execution, capability enforcement, cryptographic verification, signature verification, freshness validation, replay detection, authority grants, host behavior, network behavior, MCP behavior, AI agent execution, model execution, tool execution, or shell execution.

Lines: 186 | Words: 535 | SHA-256: d2d730e8d67be3342026515bb00049681f897b3e263e7db6383667d48f5834ef

Latticra Seal Verification Policy Status

Status: status record for Latticra Seal verification policy metadata Source: local follow-up slice Scope: status and public-entry alignment after the metadata-only Seal verification policy implementation. This record does not add cryptographic verification, signing, public-key byte verification, key material loading, private-key handling, key generation, hardware-key use, trust-store loading, revocation lookup, object sealing, runtime handoff execution, runtime authority, host reads, host writes, network behavior, shell execution, tool execution, capability enforcement, policy persistence, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal verification policy metadata implementation visible as a current project checkpoint.

It records that the implementation is bounded, deterministic, metadata-only, unsupported-for-cryptographic-verification, public-key-identity-label-only, key-material-not-loaded, private-key-denied, network-denied, revocation-denied, and no-effect.

Latticra Seal Verified Capability Gate Status

Status: status record for the Latticra Seal verified capability gate metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal verified capability gate contract and metadata implementation, now including the stricter crypto-graduation-gated capability entry point. This record does not add capability enforcement, effect execution, runtime authority, host effects, network behavior, signing, key generation, private-key storage, public-key trust stores, network trust lookup, revocation lookup, object sealing, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal verified capability gate implementation visible from public entry points.

The gate consumes verified receipt promotion metadata and evaluates a narrow local metadata-only capability/effect allowlist. The stricter entry point also consumes a passing crypto graduation gate and requires it to match the receipt metadata before the same allowlist can pass.

It is policy evaluation metadata, not permission enforcement.

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-verified-capability-gate-status.sh
```

The underlying implementation remains covered by:

```
sh scripts/test-latticra-seal-verified-capability-gate.sh
```

Expected output:

```
seal verified capability gate status: ok
seal verified capability gate invariants: ok
```

Boundary

This status record is documentation/status alignment only.

The verified capability gate implementation evaluates a verified receipt promotion record against a narrow local metadata-only allowlist. The crypto-bound entry point requires crypto_graduation_gate_passed=1 and standard_expectations_met=1 before that same metadata-only allowlist can pass. A successful gate may set gate_allowed=1 and gate_state=allowed-metadata-only, but it remains metadata-only and authority-neutral.

It does not add capability enforcement, effect execution, runtime behavior, host behavior, network behavior, signing, key generation, private-key handling, trust-store behavior, revocation lookup, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this status/public-entry alignment.

The next valid Latticra Seal slice is effect decision evaluation from an allowed crypto-graduation-gated metadata-only capability gate or another narrow status/index alignment follow-up.

docs/status/SEAL_VERIFIED_EFFECT_DECISION_STATUS.md

Source title: Latticra Seal Verified Effect Decision Status

Lines: 139 | Words: 430 | SHA-256: 3dc32ff7422d123babe6fce538227200a3c834ceb7787ed8f3d5ae360288c317

Latticra Seal Verified Effect Decision Status

Status: status record for the Latticra Seal verified effect decision metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal verified effect decision contract and metadata implementation, now carrying crypto graduation metadata forward when present on the verified capability gate. This record does not add effect execution, capability enforcement, runtime authority, host effects, network behavior, signing, key generation, private-key storage, public-key trust stores, network trust lookup, revocation lookup, object sealing, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal verified effect decision implementation visible from public entry points.

The decision consumes verified capability gate metadata and evaluates a narrow local metadata-only effect request. When the gate carries crypto graduation metadata, the decision requires that evidence to remain passed, standard-aligned, and authority-neutral before allowing the metadata-only effect classification.

It is effect classification metadata, not effect execution.

Validation

This status surface is covered by:

```
sh scripts/test-latticra-seal-verified-effect-decision-status.sh
```

The underlying implementation remains covered by:

```
sh scripts/test-latticra-seal-verified-effect-decision.sh
```

Expected output:

```
seal verified effect decision status: ok
seal verified effect decision invariants: ok
```

Boundary

This status record is documentation/status alignment only.

The verified effect decision implementation evaluates a verified capability gate record against a narrow local metadata-only effect request. If the gate includes crypto graduation evidence, the decision requires crypto_graduation_gate_passed=1, standard_expectations_met=1, and authority_promotion_allowed=0. A successful decision may set effect_allowed=1 and decision_state=allowed-report-only, but it remains metadata-only and authority-neutral.

It does not add effect execution, capability enforcement, runtime behavior, host behavior, network behavior, signing, key generation, private-key handling, trust-store behavior, revocation lookup, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this status/public-entry alignment.

The runtime handoff evaluation status/public-entry alignment now provides the predecessor for the next valid Latticra Seal slice: runtime handoff report or policy decision report propagation from eligible crypto-graduation-gated metadata-only runtime handoff evaluation, runtime handoff report status/public-entry alignment, or another narrow status/index alignment follow-up.

docs/status/SEAL_VERIFIED_RECEIPT_PROMOTION_STATUS.md

Source title: Latticra Seal Verified Receipt Promotion Status

Lines: 124 | Words: 331 | SHA-256: 811de4a44bbea298eb23d1cf863eb8fcedc1b2e2f8210768381ba8b6b768baf9

Latticra Seal Verified Receipt Promotion Status

Status: status record for the Latticra Seal verified receipt promotion metadata surface Source: local follow-up slice Scope: status and public-entry alignment after the Seal verified receipt promotion contract and metadata implementation. This record does not add capability authorization, effect execution, runtime authority, signing, key generation, private-key storage, public-key trust stores, network trust lookup, revocation lookup, object sealing, host reads, host writes, kernel behavior, Fedora approval claims, production readiness, or operating-system behavior.

Purpose

This status record makes the Latticra Seal verified receipt promotion implementation visible from public entry points.

The promotion layer converts a successful local Ed25519 verify-only result into verified receipt metadata. The promotion is evidence promotion, not permission promotion.

This status surface is covered by:

```
sh scripts/test-latticra-seal-verified-receipt-promotion-status.sh
```

The underlying implementation remains covered by:

```
sh scripts/test-latticra-seal-verified-receipt-promotion.sh
```

Expected output:

```
seal verified receipt promotion status: ok
seal verified receipt promotion invariants: ok
```

Boundary

This status record is documentation/status alignment only.

The verified receipt promotion implementation only accepts a successful Ed25519 verify-only result and produces deterministic verified receipt metadata. The promoted receipt remains authority-neutral.

It does not add capability authorization, effect execution, runtime behavior, host behavior, network behavior, signing, key generation, private-key handling, trust-store behavior, revocation lookup, production readiness, external endorsement, or authority grants.

Current next valid slice

No completion-estimate review is required from this status/public-entry alignment.

The next valid Latticra Seal slice is verified capability gate status/public-entry alignment or another narrow status/index alignment follow-up.

Latticra Security Logging, Monitoring, and Detection Baseline Status

Status: status record for security logging, monitoring, and detection baseline Date: 2026-05-26

Scope

This record tracks the security logging, monitoring, and detection baseline for security event source inventory, audit event selection, runtime-authority decision logs, identity and access events, privileged actions, log redaction, log integrity, retention, disposal, time source, detection triage, incident handoff, and monitoring non-claims.

It does not implement a log collector, SIEM, telemetry export, host sensor, network sensor, detection rule, alerting service, log storage, monitoring service, incident detection service, compliance, or runtime authority.

docs/status/STATUS_ANNOUNCEMENT_CONSISTENCY_REVIEW.md

Source title: Status and Announcement Consistency Review

Lines: 33 | Words: 109 | SHA-256: 3c987f837b882b6f90084f812e2b0db2e287ace2a66b41e146c439504247d3f1

Status and Announcement Consistency Review

Status: initial consistency review

This record checks that the public status surfaces and announcement surfaces agree after the recent Lat pipeline diagnostic, RBDM report, and project-notes alignment slices.

Reviewed files:

```
STATUS.md
docs/status/CURRENT_STATUS.md
docs/status/ANNOUNCEMENTS.md
docs/project_notes/CURRENT_DIRECTION.md
docs/project_notes/UPCOMING_WORK.md
docs/project_notes/README.md
```

Observed drift:

```
docs/status/CURRENT_STATUS.md still pointed to older Lat diagnostic README/foundation
follow-ups.
docs/status/ANNOUNCEMENTS.md still pointed to Lat pipeline diagnostic README alignment as next
step after that slice had merged.
```

Resolution:

```
align CURRENT_STATUS.md next recommended work with the project-notes queue
align ANNOUNCEMENTS.md latest next step with the current queue
record this review in STATUS.md
```

Boundary: documentation/status review only. No runtime behavior is added.

docs/status/STATUS_ANNOUNCEMENT_REVIEW.md

Source title: Status Announcement Review

Lines: 31 | Words: 101 | SHA-256: ac6a21b3b5b3b83e1073008f78a5ca0781ca8e9b035196c6047f886370ffcc01

Status Announcement Review

Status: announcement review

This record reviews the public announcement surface after the authority implementation review, authority status/docs alignment, current status detail rollup, and authority foundation index alignment.

Reviewed files:

```
STATUS.md
docs/status/ANNOUNCEMENTS.md
docs/status/CURRENT_STATUS.md
docs/FOUNDATION_INDEX.md
docs/CPP_AUTHORITY_IMPLEMENTATION_REVIEW.md
docs/status/CPP_AUTHORITY_IMPLEMENTATION_REVIEW_STATUS.md
```

Finding:

```
The announcement log did not yet record the authority review and authority index/status
alignment sequence.
```

Resolution:

```
Add a bounded public announcement entry that records the authority review/status/index alignment
 as documentation and audit posture only.
Advance the root status queue to the next public entry-point alignment slice.
```

Boundary: announcement/status review only. No implementation behavior is changed.

Public Entry Points

Ubuntu setup and package posture are now linked from:

```
README.md
```

```
docs/QUICK_START_CHEATSHEET.md
installer/README.md
docs/status/README.md
```

Current Boundary

The Ubuntu lane does not publish a package, create a PPA, claim Ubuntu archive readiness, install a root service, change systemd, change the kernel, add a privileged helper, grant network authority, or claim production readiness.

The local deb build transcript contract is intentionally blocked from evidence promotion until notice, lintian, build, and install/remove evidence gates are satisfied.

The Ubuntu package license review contract now records the current source facts, accepts the AGPL-3.0-or-later plus CC-BY-4.0 payload expression, and maps it into the local Debian copyright draft while broader notice review remains blocked.

The Ubuntu doc payload license review contract records that README.md is included in the local deb documentation payload under CC-BY-4.0.

The Ubuntu third-party material review contract records that source, license, compatibility, and notice-requirement records still need formal review before package notice promotion.

The Ubuntu generated-artifact notice review contract records that generated-artifact notice requirements still need formal review before any deb artifact or build evidence can promote package notice status.

The Ubuntu NOTICE file decision contract records that the package still needs a reviewed decision about whether a NOTICE file is required and how it would be mapped into the local deb payload.

The Ubuntu Debian copyright notice mapping contract records that the local deb payload still needs a reviewed mapping into packaging/ubuntu/debian/copyright before package notice promotion.

The Ubuntu trademark notice boundary contract records that package metadata still needs a reviewed trademark, project-identity, and endorsement boundary before package notice promotion.

The Ubuntu release artifact notice requirements contract records that source package, deb artifact, .changes, build-log, installed-payload, and release-notes notice requirements still need review before package notice promotion.

The Ubuntu package notice promotion gate records the aggregate blocked state across all package notice prerequisites before package license promotion can proceed.

The Ubuntu package license promotion gate records the aggregate blocked state across package notice and package license prerequisites before lintian/static metadata or build transcript evidence can proceed.

The Ubuntu lintian static metadata contract records the future lintian/static metadata evidence shape while keeping lintian execution and build transcript evidence blocked.

The Ubuntu local deb build transcript acceptance gate records that no future local build transcript can be accepted until lintian/static metadata, package license promotion, transcript evidence, payload evidence, and non-claims are reviewed.

The Ubuntu local deb install/remove evidence contract records the future install/remove evidence shape while keeping package install commands, package remove commands, host mutation, and install/remove evidence promotion blocked.

The Ubuntu source package evidence contract records the future .dsc, source package, .changes, and digest evidence shape while keeping dpkg-source, source package creation, signing, upload, and publication blocked.

The Ubuntu upload/signing authority evidence contract records the future upload target, Launchpad account, signing key, debsign, and dput evidence shape while keeping signing, upload, and publication blocked.

The Ubuntu PPA/archive publication gate records the future upload, signing, Launchpad, and archive-submission evidence shape while keeping debsign, dput, PPA creation, Launchpad upload, Ubuntu archive submission, and publication readiness blocked.

The Ubuntu package notice inventory records the current local-deb draft payload facts without promoting the review. The Ubuntu package notice review contract records the remaining notice obligations that must be settled before package promotion can proceed.

Next Recommended Lane

```
Review the Ubuntu upload/signing authority evidence contract, then keep signing and upload
evidence blocked until source package evidence is reviewed.
```

docs/status/VULNERABILITY_MANAGEMENT_RELEASE_GATE_BASELINE_STATUS.md

Source title: Latticra Vulnerability Management Release Gate Baseline Status

Lines: 56 | Words: 131 | SHA-256: 5a4e302c5ab38542a25f856c0dad44518cf249e9673f55dd4dc302a7ddf96f3d

Latticra Vulnerability Management Release Gate Baseline Status

Status: status record for vulnerability management release gate baseline Date: 2026-05-26

Scope

This record tracks the vulnerability-management release gate baseline for CISA KEV review, NVD/CVE review, coordinated vulnerability disclosure, dependency/component inventory, release blocking, mitigation/exception records, and public non-claims before production release, update, installer, package, internet-facing service, or security-product claims.

It does not run vulnerability scans, query live feeds, publish advisories, submit CVEs, patch dependencies, produce an SBOM, publish releases, grant release authority, or claim product security.

Current fields

```

Latticra Zero-Trust Runtime Authority Baseline Status

Status: status record for zero-trust runtime authority baseline Date: 2026-05-26

Scope

This record tracks the zero-trust runtime authority baseline for future runtime, tool, host I/O, network, server/MCP, update, recovery, boot, hardware, agentic automation, and authority-bearing request paths.

It does not implement runtime execution, network access, host I/O, tool execution, MCP behavior, recovery behavior, boot behavior, hardware behavior, policy enforcement, capability enforcement, or production protection.

docs/latticra-system-substrate/README.md

Source title: The Latticra System Substrate

Lines: 73 | Words: 760 | SHA-256: ec96bca2c315790ac2012a1ac5583630f040373080f7f0d5562b7ec616a24b86

The Latticra System Substrate

Title: The Latticra System Substrate: An Effect at Modern Security
 Edition: Working Draft 0.16 — 2026-05-26
 Role: Project-level technical handbook for Latticra, Latticra Seal trust-boundary metadata, authority-neutral Ed25519 verification evidence, metadata-only capability/effect/handoff/report/envelope/signature-request/signing-operation classification and status guards, disposable Fedora VM CLI payload validation evidence, Latticra Console host/receipt/signature/OS/VM contract surfaces, Runtime Boundary Lat/LIR provenance records, Nucleus, Nadia Stage-46 contract-only offline-AI release/receipt/review/disposition metadata, Panel, platform install validation lanes, Lat/LIR contract surfaces, receipts, reports, and future runtime-boundary research.

This handbook supersedes the former standalone Latticra Seal Documentation Handbook as the main reader-facing book for the project.

The Seal handbook was useful as a subsystem reference. This new handbook expands the scope into a computer-science-oriented project book: Latticra as an evidence-bound system substrate for local integrity, authority boundaries, reproducible reports, receipts, policy semantics, and future runtime-handoff research.

- Editable DOCX edition
- Public repository folder

Living handbook cadence

Treat this handbook as a live project artifact, not a finished release.

As Latticra work progresses, material decisions, capability changes, boundary refinements, validation lanes, public wording, and evidence updates should be folded back into the handbook alongside the nearer-term project notes and status records.

Handbook updates should stay evidence-bound: describe what is implemented, tested, measured, planned, or explicitly out of scope, and avoid promoting future runtime, enforcement, host-protection, packaging, or production claims ahead of reproducible evidence.

Correct interpretation

Latticra should be understood as early, evidence-bound systems architecture work.

It is not currently:

- a production security product

- a host-protection system
- a hardened sandbox
- a malware prevention system
- a ransomware prevention system
- a kernel enforcement layer
- a systemd enforcement layer
- an SELinux authority
- a root installer
- a network authority
- a production runtime authority
- an operating-system replacement

The handbook's core claim is narrower and more useful: Latticra is a substrate for making security-relevant effects visible, typed, reviewable, reproducible, and eventually governable.

Relationship to Latticra Seal

Latticra Seal remains the verification, reporting, manifest/hash baseline, and policy-boundary lane inside the Latticra ecosystem.

Working Draft 0.16 carries the Seal trust/crypto ladder forward, keeps the current Latticra Console contract bundle, preserves Runtime Boundary Lat/LIR provenance records, keeps signing-operation status guard/predecessor alignment for the Seal signing path, folds in disposable Fedora VM CLI payload validation evidence and README/status alignment, and adds Nadia Stage-39 through Stage-46 release/receipt/review/disposition contract metadata. Seal documents signed request metadata, request freshness metadata, verification receipts, crypto verify backend metadata, local Ed25519 verify-only results, verified receipt promotion metadata, verified capability gate metadata, verified effect decision metadata, runtime handoff evaluation metadata, runtime handoff report metadata, report envelope metadata, signature request metadata, signing authorization metadata, signer handoff metadata, signer invocation metadata, signing-operation readiness metadata, effect decisions, runtime handoff boundaries, and report envelopes. Latticra Console documents metadata-only host-adapter, receipt-request, receipt-payload, payload-artifact-draft, signature-request-binding, OS-base, and VM-evidence contract surfaces. Runtime Boundary carries Lat pipeline first-clause evidence as provenance metadata. Fedora platform evidence distinguishes a bounded disposable-VM CLI payload, /usr/bin/latticra plus /usr/share/doc/latticra/README.md, with host_install_ready_for_cli_payload=1 from production_installer_ready=0, fedora_distribution_ready=0, fedora_approval_claimed=0, daily_driver_install_ready=0, and immutable_fedora_ready=0. Nadia now records contract-only prompt-evaluation-result release receipt, review, disposition, release, receipt, review, and review-disposition metadata through Stage-46 while preserving runtime_invoked=0, prompt_evaluated=0, token_generation_performed=0, inference_performed=0, qa_dialogue_generated=0, answer_text_generated=0, network_authority=0, tool_execution_authority=0, source_mutation_authority=0, sexual_request_refusal=always, and manipulation_resistance=required. These surfaces do not claim host embedding, language execution, operator evaluation, payload materialization outside the validated package payload, receipt writing, signing, signer invocation, signature verification, private-key handling, key generation, trust-store behavior, revocation checks, object sealing, capability enforcement, effect execution, VM launch outside recorded validation, boot behavior, host effects beyond the disposable VM transcript, Nadia release/receipt/review/disposition recording, model-output recording, prompt evaluation, token generation, inference, dialogue generation, network authority, runtime authority, runtime handoff execution, production OS status, Fedora approval, daily-driver readiness, immutable Fedora readiness, security capability, update safety, recovery safety, sandboxing, malware prevention, ransomware prevention, OS-replacement readiness, or production cryptography.

The new System Substrate handbook places Seal in the full project architecture alongside:

- Latticra Panel
- Latticra Console
- Nucleus report-only task boundaries
- Nadia Stage-46 offline AI contract metadata
- macOS and Fedora platform validation lanes
- guarded local-prefix installation
- receipts and reports
- command contracts
- Lat and LIR contract surfaces
- runtime-boundary metadata
- validation lanes
- research artifacts and visual theorem engines

Canonical public wording

Use language like:

Latticra is an early, evidence-bound system substrate for describing, measuring, and presenting local project state under explicit authority constraints.

Avoid language that claims production protection, runtime enforcement, malware prevention, ransomware prevention, kernel enforcement, root authority, or certification unless those claims are implemented, tested, and documented with reproducible evidence.

docs/LOCAL_ARTIFACT_MANIFEST_FIXTURE.md

Source title: Local Artifact Manifest Fixture

Lines: 81 | Words: 202 | SHA-256: 9d9df70c0c0e527ce356276cfdf969e5b62ec9258ed7bebc1ad28001c7f79342

Local Artifact Manifest Fixture

Status: fixture record Scope: repository fixture for the local Latticra artifact manifest lane.

Purpose

This slice adds the first committed manifest fixture for the local no-effect CLI RPM artifact.

The fixture gives the existing manifest contract a concrete, reviewable sample without creating a generated artifact, publishing a package, or changing host behavior.

Fixture path

```
fixtures/artifact/local-artifact-manifest.txt
```

Guard path

```
scripts/test-local-artifact-manifest-fixture.sh
```

Expected output:

```
local_artifact_manifest_fixture: ok
```

Fixture boundary

The fixture records metadata for the current local no-effect CLI RPM payload:

```
/usr/bin/latticra
/usr/share/doc/latticra/README.md
```

It keeps the readiness boundary explicit:

```
production_installer_ready=0
fedora_distribution_ready=0
fedora_approval_claimed=0
daily_driver_install_ready=0
immutable_fedora_ready=0
```

The checksum, signature, and SBOM fields remain fixture placeholders or absent evidence fields:

```
artifact_checksum_recorded=0
artifact_signature_recorded=0
artifact_sbom_recorded=0
```

Relationship to the contract

This fixture follows:

```
docs/LOCAL_INSTALLER_ARTIFACT_MANIFEST_CONTRACT.md
```

It satisfies the next implementation lane named by that contract:

```
Add installer artifact manifest fixture
```

Non-claims

This fixture is not a generated release artifact.

It is not a production package.

It is not Fedora approval or Fedora distribution readiness.

It is not daily-driver or immutable-Fedora readiness.

It does not change boot, service, kernel, SELinux, network, install, uninstall, upgrade, rollback, or host state.

docs/MACOS_APP_BUNDLE_WRITER_ALIGNMENT.md

Source title: macOS App Bundle Writer Alignment

Lines: 141 | Words: 506 | SHA-256: b8716bdfa2dcfd6a237340f28414b18dfa32984ff0b0cc6c5dab5da2264d3189

macOS App Bundle Writer Alignment

Status: macOS app bundle writer contract/status alignment Date: 2026-05-25 CDT Scope: align public and status meaning after the no-effect macOS app bundle writer dry-run prototype.

Purpose

This alignment separates the current no-effect writer-shaped dry-run prototype from any future commit-capable macOS app bundle writer.

The current prototype can render phases, validate user-local paths, inspect existing managed markers, report missing local executable/icon candidates, and block unsafe paths.

It cannot create an app bundle, write Application Support files, install wrappers, write receipts, mutate shell profiles, or verify a real install.

The macOS local candidate asset probe remains a no-effect readiness check for caller-supplied Panel executable and icon candidates. The macOS dry-run writer candidate integration joins that probe to the dry-run writer and only reports readiness when both agree while all commit and write flags remain disabled. The macOS commit gate contract keeps that readiness from becoming write authority, and the macOS verification transcript contract defines the future evidence required before install verification can be claimed.

Current Capability

```
macos_app_bundle_writer_dry_run_present=1
macos_app_bundle_writer_phase_report_present=1
macos_app_bundle_writer_path_guard_present=1
macos_app_bundle_writer_marker_inspection_present=1
macos_app_bundle_writer_missing_candidate_detection_present=1
macos_local_candidate_asset_probe_present=1
macos_dry_run_writer_candidate_integration_present=1
macos_commit_gate_contract_present=1
macos_verification_transcript_contract_present=1
macos_app_bundle_writer_commit_disabled=1
```

The current command is:

```
sh scripts/macos-app-bundle-writer-dry-run.sh
```

The current expected authority posture is:

```
phase_report_only=1
commit_user_local_managed_artifacts=0
application_support_write_performed=0
app_bundle_write_performed=0
cli_wrapper_write_performed=0
host_mutation_performed=0
network_performed=0
```

Explicit Non-Capability

The following must remain false until a separate commit-capable writer contract, implementation, reset/uninstall implementation, and verification evidence exist:

```
macos_app_bundle_writer_present=0
macos_app_bundle_commit_capable_writer_present=0
macos_app_bundle_created=0
macos_install_verified=0
macos_reset_uninstall_implemented=0
macos_verification_transcript_present=0
```

The dry-run writer must not be described as:

```
macOS installer
app bundle installer
commit-capable writer
user-local install evidence
app bundle evidence
signed build evidence
notarized build evidence
production installer
security product
```

Future Commit Gate Requirements

Before any commit-capable writer exists, a future lane must add all of:

```
local_panel_executable_candidate_probe=1
local_icon_candidate_probe=1
commit_gate_contract=1
reset_uninstall_implementation_plan=1
verification_transcript_contract=1
unsafe_path_negative_tests=1
unmanaged_target_preservation_tests=1
receipt_completeness_tests=1
```

Even then, commit behavior must remain disabled until a separate implementation explicitly changes:

```
commit_user_local_managed_artifacts=1
```

The current integration can report only:

```
integration_decision=ready-for-future-commit-gate-no-effect
commit_user_local_managed_artifacts=0
```

Safe Public Wording

A careful public statement is:

```
Latticra has a no-effect macOS app bundle writer dry-run prototype that renders future writer
phases and blocks unsafe paths while keeping all writes disabled.
```

That statement must not be shortened to "Latticra has a macOS app bundle writer" unless the sentence also says "dry-run" and "no-effect."

Validation

This alignment is guarded by:

```
sh scripts/test-macos-app-bundle-writer-alignment.sh
```

Expected output:

```
macos_app_bundle_writer_alignment: ok
```

Non-Claims

This alignment is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_APP_BUNDLE_WRITER_DRY_RUN.md

Source title: macOS App Bundle Writer Dry-Run Prototype

Lines: 183 | Words: 565 | SHA-256: 81acd5a6179cfd8d902e6bab82c579513a67655d89a607854daa44781e0d632e

macOS App Bundle Writer Dry-Run Prototype

Status: no-effect macOS app bundle writer dry-run prototype Date: 2026-05-25 CDT Scope: executable phase-report prototype for the future macOS user-local app bundle writer.

Purpose

This prototype emits the writer-shaped phase report from the macOS user-local app bundle implementation plan.

It validates planned user-local paths, inspects existing targets for Latticra managed markers, checks whether optional local Panel executable and icon candidates are present, and reports the phase decision. It does not create an app bundle, write Application Support files, install wrappers, mutate shell profiles, build the Panel, use launchd, access Keychain, request TCC permissions, use Endpoint Security, use System Extensions, use Network Extensions, open the network, or grant runtime authority.

The macOS local candidate asset probe is the no-effect readiness check that can supply those optional executable and icon candidates. The macOS dry-run writer candidate integration then runs the probe and this writer dry-run together to prove that accepted inputs can move the writer decision to ready-for-future-commit-gate while commit_user_local_managed_artifacts=0. The macOS commit gate contract keeps that future gate closed, and the macOS verification transcript contract defines the exact post-write evidence required before install verification can be claimed.

Command

```
sh scripts/macos-app-bundle-writer-dry-run.sh
```

Optional candidate inputs:

```
sh scripts/macos-app-bundle-writer-dry-run.sh \
  --panel-executable &lt;local-executable&gt; \
  --icon &lt;local-icon-file&gt;
```

Report Fields

The report starts with:

```
MACOS APP BUNDLE WRITER DRY RUN
dry_run_status=ok
phase_report_only=1
```

It must include:

```
path_guard_status=allowed-user-local-dry-run
unsafe_path_detected=0
phase_1=validate_macos_host_and_toolchain_probe
phase_2=validate_user_local_paths_and_contract
phase_3=inspect_existing_targets_for_managed_markers
phase_4=stage_app_bundle_manifest_and_infoplist
phase_5=stage_panel_executable_and_icon_inputs
phase_6=stage_application_support_layout
phase_7=stage_cli_wrappers
phase_8=commit_user_local_managed_artifacts
phase_8_status=disabled
phase_9=write_receipts_and_measurements
phase_9_status=disabled
phase_10=run_verification_transcript
phase_10_status=not-run
commit_user_local_managed_artifacts=0
```

If no executable or icon candidate is supplied, the default dry-run may report:

```
dry_run_decision=blocked-missing-panel-executable
```

That is expected. The dry-run writer is allowed to report readiness gaps, but it must not fill them by building, downloading, generating, signing, or writing files.

Candidate Integration

The writer dry-run can be paired with the candidate probe by running:

```
sh scripts/macos-dry-run-writer-candidate-integration.sh \
  --panel-executable &lt;local-executable&gt; \
  --icon &lt;local-icon-file&gt;
```

When both checks agree and all write flags remain disabled, the integration reports:

```
asset_probe_decision=ready-for-dry-run-writer-inputs
writer_dry_run_decision=ready-for-future-commit-gate
integration_decision=ready-for-future-commit-gate-no-effect
commit_user_local_managed_artifacts=0
```

Blocked Paths

Unsafe path inputs must be blocked before write:

```
sh scripts/macos-app-bundle-writer-dry-run.sh --app-bundle /Applications/Latticra.app
```

Expected fields:

```
path_guard_status=blocked-unsafe-user-local-path
unsafe_path_detected=1
dry_run_decision=blocked-unsafe-path
commit_user_local_managed_artifacts=0
app_bundle_write_performed=0
host_mutation_performed=0
```

Managed Marker Inspection

Existing targets are classified as:

```
absent
managed
unmanaged-preserve-and-block
```

The dry-run prototype must report unmanaged targets as blocked and preserved:

```
unmanaged_existing_target=1
dry_run_decision=blocked-unmanaged-existing-target
```

It must not remove, overwrite, rename, chmod, or repair unmanaged targets.

Authority Boundary

The dry-run prototype must always preserve:

```
commit_user_local_managed_artifacts=0
application_support_write_performed=0
payload_write_performed=0
config_write_performed=0
receipt_write_performed=0
app_bundle_write_performed=0
info_plist_write_performed=0
app_executable_write_performed=0
app_icon_write_performed=0
cli_wrapper_write_performed=0
shell_profile_mutation_performed=0
installer_write_performed=0
host_mutation_performed=0
network_performed=0
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Validation

This prototype is guarded by:

```
sh scripts/test-macos-app-bundle-writer-dry-run.sh
```

Expected output:

```
macos_app_bundle_writer_dry_run: ok
```

Non-Claims

This prototype is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_BUILD_PLATFORM_PROBE.md

Source title: macOS Build Platform Probe

Lines: 124 | Words: 357 | SHA-256: 05da56d3dc15a47ee5c7562b11646a99144c025482dd0d47d1894369e3bfe2ef

macOS Build Platform Probe

Status: no-effect macOS build/platform probe Date: 2026-05-25 CDT Scope: bounded platform and build-readiness probe after the macOS integration transferability map.

Purpose

This lane records whether the current checkout has enough local toolchain and source evidence to consider later macOS Panel and C test build work.

It is intentionally not an installer lane. It does not create an app bundle, build a package, install wrappers, mutate shell profiles, use launchd, access Keychain, request TCC permissions, use Endpoint Security, use System Extensions, use Network Extensions, open the network, or grant runtime authority.

Probe Command

```
sh scripts/macos-build-platform-probe.sh
```

Optional report file:

```
sh scripts/macos-build-platform-probe.sh --output reports/macos-build-platform-probe.txt
```

The default command writes the report to stdout. The optional --output path writes only where the operator explicitly asks.

Report Fields

The report records:

```
MACOS BUILD PLATFORM PROBE
probe_status=ok
host_kernel_name=Darwin
host_arch=&lt;architecture&gt;
macos_host_detected=&lt;0-or-1&gt;
sw_vers_recorded=&lt;0-or-1&gt;
clang_probe_recorded=&lt;0-or-1&gt;
rust_probe_recorded=1
architecture_recorded=1
panel_build_probe_recorded=1
panel_build_performed=0
panel_build_ready=&lt;0-or-1&gt;
c_test_build_probe_recorded=1
c_test_build_performed=0
c_test_build_ready=&lt;0-or-1&gt;
app_bundle_created=0
installer_write_performed=0
host_mutation_performed=0
network_performed=0
```

The probe records build readiness. It does not run cargo build, compile C tests, create an app bundle, or install artifacts.

Read-Only Inputs

The probe may read:

```
uname
sw_vers
clang --version
```

```
rustc --version
cargo --version
make availability
installer/latticra-installer/Cargo.toml
installer/latticra-installer/Cargo.lock
installer/latticra-installer/src/ui.rs
tests/lat_language_grammar_invariants.c
src/lat_parser.c
include/latticra
```

On non-macOS hosts, the script still emits a deterministic report with:

```
macos_host_detected=0
```

That allows CI to validate the contract without pretending it has macOS install evidence.

Authority Boundary

The probe must preserve:

```
app_bundle_created=0
installer_write_performed=0
host_mutation_performed=0
network_performed=0
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Validation

This lane is guarded by:

```
sh scripts/test-macos-build-platform-probe.sh
```

Expected output:

```
macos_build_platform_probe: ok
```

Non-Claims

This probe is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

Next Recommended Lane

```
Add a macOS user-local app bundle implementation plan that remains no-effect and defines writer
phases, failure behavior, reset/uninstall sequencing, verification commands, and guard tests
before implementation.
```

docs/MACOS_COMMIT_GATE_CONTRACT.md

Source title: macOS Commit Gate Contract

Lines: 171 | Words: 357 | SHA-256: efe332ce7a732128ad8a9be1b82755148cd9add975e089f7494c6d8a7a539936

macOS Commit Gate Contract

Status: no-effect macOS commit gate contract Date: 2026-05-25 CDT Scope: closed commit gate for any future macOS user-local managed app bundle writer.

Purpose

This contract separates dry-run readiness from write authority.

The macOS dry-run writer candidate integration can report:

```
integration_decision=ready-for-future-commit-gate-no-effect
```

The macOS verification transcript contract and reset/uninstall dry-run contract now define future evidence shapes, but they do not provide write, reset, uninstall, or transcript evidence. That does not open the commit gate. The current and only allowed commit posture remains:

```
commit_gate_state=closed
commit_user_local_managed_artifacts=0
macos_app_bundle_commit_capable_writer_present=0
```

Command

```
sh scripts/macos-commit-gate-contract.sh
```

The command writes only a deterministic report to stdout.

Current Gate Decision

The current gate decision is:

```
commit_gate_decision=blocked-missing-managed-write-implementation
```

The gate stays closed because these future pieces do not exist yet:

```
managed_write_implementation_present=0
reset_uninstall_implementation_present=0
macos_verification_transcript_contract_present=1
verification_transcript_contract_present=1
verification_transcript_evidence_present=0
macos_reset_uninstall_dry_run_contract_present=1
macos_reset_uninstall_live_target_classifier_present=1
macos_reset_uninstall_dry_run_planner_present=1
reset_uninstall_dry_run_planner_transcript_present=1
macos_reset_uninstall_absence_report_contract_present=1
macos_reset_uninstall_receipt_schema_contract_present=1
macos_reset_uninstall_implementation_gate_contract_present=1
macos_reset_uninstall_operator_intent_contract_present=1
macos_reset_uninstall_effect_authorization_contract_present=1
macos_reset_uninstall_evidence_bundle_contract_present=1
macos_reset_uninstall_live_implementation_plan_contract_present=1
macos_reset_uninstall_live_execution_preflight_contract_present=1
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_passed=0
live_execution_preflight_blocking=1
live_execution_preflight_deletion_enabled=0
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0
live_runner_interface_current_decision=deny
live_runner_interface_dispatch_enabled=0
live_runner_interface_runner_handoff_enabled=0
live_implementation_plan_contract_state=defined-no-effect
live_reset_uninstall_implementation_present=0
evidence_bundle_contract_state=defined-no-effect
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_complete=0
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
operator_intent_contract_state=defined-no-effect
operator_intent_evidence_written=0
reset_uninstall_live_run_allowed=0
reset_uninstall_deletion_enabled=0
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
reset_uninstall_receipt_evidence_present=0
reset_receipt_evidence_present=0
reset_uninstall_dry_run_evidence_present=0
absence_report_evidence_present=0
```

Opening Preconditions

Before commit_user_local_managed_artifacts may ever become 1, a later implementation must provide all of:

```
candidate_flow_ready_required=1
operator_explicit_commit_intent_required=1
managed_write_implementation_present=1
reset_uninstall_implementation_present=1
verification_transcript_contract_present=1
verification_transcript_evidence_present=1
unsafe_path_negative_tests_required=1
unmanaged_target_preservation_tests_required=1
receipt_completeness_tests_required=1
reset_uninstall_dry_run_required=1
verification_transcript_required=1
```

The future implementation must still preserve user-local scope:

```
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
```

Authority Boundary

This contract preserves:

```
commit_user_local_managed_artifacts=0
application_support_write_performed=0
payload_write_performed=0
config_write_performed=0
receipt_write_performed=0
app_bundle_write_performed=0
info_plist_write_performed=0
app_executable_write_performed=0
app_icon_write_performed=0
cli_wrapper_write_performed=0
shell_profile_mutation_performed=0
installer_write_performed=0
host_mutation_performed=0
network_performed=0
production_installer_ready=0
```

Validation

This contract is guarded by:

```
sh scripts/test-macos-commit-gate-contract.sh
```

Expected output:

```
macos_commit_gate_contract: ok
```

Non-Claims

This contract is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_DRY_RUN_PLAN_ADAPTER.md

Source title: macOS Dry-Run Plan Adapter

Lines: 127 | Words: 361 | SHA-256: 14192bfa954ad4ea76d635c426db2da82f6403dd79121ab3772c51a5f93c4376

macOS Dry-Run Plan Adapter

Status: no-effect macOS dry-run plan adapter Date: 2026-05-25 CDT Scope: render user-local macOS installation intent after the build/platform probe without writing artifacts.

Purpose

This lane adapts the current Latticra user-local installer model to macOS as a dry-run plan only.

It renders the intended Application Support prefix, app bundle layout, CLI wrapper paths, receipt paths, logs/caches paths, and verification command. It does not create those paths, write an app bundle, install wrappers, mutate shell profiles, use launchd, access Keychain, request TCC permissions, use Endpoint Security, use System Extensions, use Network Extensions, open the network, or grant runtime authority.

Adapter Command

```
sh scripts/macos-dry-run-plan-adapter.sh
```

Optional report file:

```
sh scripts/macos-dry-run-plan-adapter.sh --output reports/macos-dry-run-plan.txt
```

The default command writes the plan to stdout. The optional --output path writes only where the operator explicitly asks.

Default Planned Layout

```
application_support_prefix=$HOME/Library/Application Support/Latticra
app_bundle=$HOME/Applications/Latticra Panel.app
cli_bin=$HOME/.local/bin
receipts_dir=$HOME/Library/Application Support/Latticra/receipts
logs_dir=$HOME/Library/Logs/Latticra
caches_dir=$HOME/Library/Caches/Latticra
```

The app bundle plan is:

```
Latticra Panel.app/
  Contents/
    Info.plist
    MacOS/latticra-panel
    Resources/latticra-panel.icns
```

The planned wrapper paths are:

```
planned_latticra_wrapper=$HOME/.local/bin/latticra
planned_lat_wrapper=$HOME/.local/bin/lat
planned_latticra_seal_wrapper=$HOME/.local/bin/latticra-seal
planned_latticra_nadia_wrapper=$HOME/.local/bin/latticra-nadia
planned_latticra_panel_wrapper=$HOME/.local/bin/latticra-panel
```

Path Guard

The dry-run adapter classifies the default layout as:

```
path_guard_status=allowed-user-local-dry-run
dry_run_allowed=1
```

If a caller supplies paths outside the supported user-local macOS layout, the plan reports:

```
path_guard_status=blocked-unsafe-user-local-path
dry_run_allowed=0
```

Blocking a path still must not trigger a fallback write, privileged helper, package installer, network lookup, or shell-profile mutation.

Authority Boundary

The plan must preserve:

```
application_support_write_performed=0
payload_write_performed=0
config_write_performed=0
receipt_write_performed=0
app_bundle_write_performed=0
info_plist_write_performed=0
app_executable_write_performed=0
app_icon_write_performed=0
cli_wrapper_write_performed=0
shell_profile_mutation_performed=0
installer_write_performed=0
host_mutation_performed=0
network_performed=0
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Validation

This lane is guarded by:

```
sh scripts/test-macos-dry-run-plan-adapter.sh
```

Expected output:

```
macos_dry_run_plan_adapter: ok
```

Non-Claims

This adapter is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

Next Recommended Lane

```
Add a macOS user-local app bundle implementation plan that remains no-effect and defines writer
phases, failure behavior, reset/uninstall sequencing, verification commands, and guard tests
before implementation.
```

docs/MACOS_DRY_RUN_WRITER_CANDIDATE_INTEGRATION.md

Source title: macOS Dry-Run Writer Candidate Integration

Lines: 142 | Words: 388 | SHA-256: 71027e71158da3a961f2dd64b105cbf8efa0d330125e2db2ca5ddaef374bffc9

macOS Dry-Run Writer Candidate Integration

Status: no-effect macOS dry-run writer candidate integration Date: 2026-05-25 CDT Scope: bridge the local candidate asset probe to the macOS app bundle writer dry-run without enabling writes.

Purpose

This integration runs the macOS local candidate asset probe and the app bundle writer dry-run with the same caller-supplied Panel executable and icon inputs.

It records whether:

```
asset_probe_decision=ready-for-dry-run-writer-inputs
writer_dry_run_decision=ready-for-future-commit-gate
```

```
commit_user_local_managed_artifacts=0
```

Only when all three stay true does the integration report:

```
integration_decision=ready-for-future-commit-gate-no-effect
```

That result is still not a real commit gate opening. It means the no-effect checks agree that the supplied local candidates can be carried to the macOS commit gate contract, which remains closed. The macOS verification transcript contract defines the future evidence required after writes, but no transcript evidence exists yet.

Command

```
sh scripts/macos-dry-run-writer-candidate-integration.sh \
  --panel-executable &lt;local-executable&gt; \
  --icon &lt;local-icon-file&gt;
```

The command writes only a deterministic report to stdout.

Report Fields

The report starts with:

```
MACOS DRY RUN WRITER CANDIDATE INTEGRATION
integration_status=ok
integration_mode=macos-dry-run-writer-candidate-integration
```

It must include:

```
asset_probe_script=&lt;repo&gt;/scripts/macos-local-candidate-asset-probe.sh
writer_dry_run_script=&lt;repo&gt;/scripts/macos-app-bundle-writer-dry-run.sh
asset_probe_decision=&lt;decision&gt;
writer_dry_run_decision=&lt;decision&gt;
writer_phase_5_status=&lt;status&gt;
asset_probe_ready=&lt;0-or-1&gt;
writer_dry_run_ready=&lt;0-or-1&gt;
authority_boundary_preserved=&lt;0-or-1&gt;
candidate_flow_ready=&lt;0-or-1&gt;
integration_decision=&lt;decision&gt;
commit_user_local_managed_artifacts=0
app_bundle_write_performed=0
host_mutation_performed=0
network_performed=0
```

Decisions

The integration may report:

```
blocked-asset-probe-not-ready
blocked-writer-dry-run-not-ready
blocked-authority-boundary-widened
ready-for-future-commit-gate-no-effect
```

If the writer dry-run would otherwise accept an icon file that the local candidate asset probe rejects, the integration remains blocked by the probe:

```
asset_probe_decision=blocked-unsupported-icon-candidate
integration_decision=blocked-asset-probe-not-ready
```

Authority Boundary

The integration preserves:

```
build_performed=0
download_performed=0
copy_performed=0
signing_performed=0
notarization_performed=0
commit_user_local_managed_artifacts=0
app_bundle_write_performed=0
info_plist_write_performed=0
app_executable_write_performed=0
app_icon_write_performed=0
cli_wrapper_write_performed=0
shell_profile_mutation_performed=0
host_mutation_performed=0
network_performed=0
```

```
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Validation

This integration is guarded by:

```
sh scripts/test-macos-dry-run-writer-candidate-integration.sh
```

Expected output:

```
macos_dry_run_writer_candidate_integration: ok
```

Non-Claims

This integration is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_INTEGRATION_TRANSFERABILITY_PLAN.md

Source title: macOS Integration Transferability Plan

Lines: 662 | Words: 2029 | SHA-256: 3c26202a66491064d985e592c7af5af028e0108d146e3d05db7f6c5b45dfbb7b

macOS Integration Transferability Plan

Status: macOS integration transferability plan Date: 2026-05-25 CDT Current posture: planning and transferability mapping only Scope: macOS integration paths that can be transferred from current Latticra work without widening authority claims.

Summary

This document maps the current Latticra repository to a macOS integration lane.

The goal is to reuse the strongest existing parts of Latticra: no-effect reporting, denied-by-default authority, receipt-first installation, guarded local-prefix layout, Panel-driven operator review, Lat/LIR metadata paths, Latticra Seal boundary reports, Runtime Boundary classification, Nucleus task-boundary records, and Nadia offline AI contract surfaces.

This is not a macOS implementation, app bundle, notarized release, launch service, sandbox, Keychain integration, Endpoint Security integration, system extension, kernel extension, package installer, or production security claim.

Transferable Now

The following areas are mostly transferable to macOS because they are already no-effect, metadata-oriented, or user-local:

```
lat_parse_validate_lower_pipeline=transferable
lir_metadata_reporting=transferable
l_ui_parser_validation_reporting=transferable
nucleus_report_only_task_boundary=transferable
runtime_boundary_classification_reports=transferable
latticra_seal_report_only_metadata=transferable
latticra_seal_request_boundary_metadata=transferable
latticra_seal_policy_decision_metadata=transferable
latticra_seal_verification_receipt_metadata=transferable
nadia_offline_ai_contract_surfaces=transferable
panel_guided_operator_review_model=transferable
receipt_first_install_evidence=transferable
deny_by_default_authority_vocabulary=transferable
deterministic_shell_guards=partially_transferable
c_invariant_tests=transferable_after_build_probe
rust_egui_panel=transferable_after_macos_build_probe
```

The current Rust Panel is a practical transfer point because it is not bound to GTK or GNOME at the application architecture level. The current shell installer is also useful because its authority model is already user-local and receipt-oriented.

Needs A macOS Adapter

These areas should not be copied directly from the Fedora/Linux lane:

```
xdg_desktop_entry=replace_with_app_bundle
hicolor_icon_cache=replace_with_app_resources
update_desktop_database=not_applicable
gtk_icon_cache=not_applicable
fedora_validation_profile=keep_separate
rpm_validation_lanes=not_transferable_to_macos
systemd_nonclaim_wording=replace_with_launchd_nonclaim_wording
selinux_nonclaim_wording=replace_with_macos_privacy_security_nonclaim_wording
dnf_prerequisites=replace_with_xcode_clt_and_rust_probe
linux_desktop_launcher_verification=replace_with_app_bundle_verification
```

A macOS installer lane should introduce a platform adapter instead of widening the existing Linux path. The adapter should keep dry-run first, then write only user-local managed artifacts.

Recommended macOS paths:

```
app_support_prefix=$HOME/Library/Application Support/Latticra
app_bundle=$HOME/Applications/Latticra Panel.app
logs_dir=$HOME/Library/Logs/Latticra
caches_dir=$HOME/Library/Caches/Latticra
preferences_dir=$HOME/Library/Preferences
optional_cli_bin=$HOME/.local/bin
receipts_dir=$HOME/Library/Application Support/Latticra/receipts
```

The default macOS lane should not write /Applications, /Library, /System, /usr/local, /opt/homebrew, LaunchDaemons, system LaunchAgents, kernel extension paths, system extension paths, network extension paths, or privileged helper tools.

First macOS Lane

The first implementation lane should be deliberately small:

```
stage_0_transferability_plan=present
stage_1_macos_build_probe=present
stage_2_macos_dry_run_plan=present
stage_3_user_local_app_bundle_contract=present
stage_3_user_local_app_bundle_implementation_plan=present
stage_3_user_local_app_bundle_writer_dry_run=present
stage_3_user_local_app_bundle_writer_alignment=present
stage_3_local_candidate_asset_probe=present
stage_3_dry_run_writer_candidate_integration=present
stage_3_macos_commit_gate_contract=present
stage_3_macos_readme_installer_usage=present
stage_3_user_local_app_bundle=future
```

```
stage_4_user_local_verification_transcript_contract=present
stage_4_user_local_verification_transcript_evidence=future
stage_4_user_local_verification_transcript=future
stage_4_macos_reset_uninstall_dry_run_contract=present
stage_4_macos_reset_uninstall_live_target_classifier=present
stage_4_macos_reset_uninstall_dry_run_planner=present
stage_4_macos_reset_uninstall_absence_report_contract=present

stage_4_macos_reset_uninstall_live_runner_interface_contract=present
stage_4_macos_reset_uninstall_live_runner_noop_prototype_contract=present
stage_4_macos_reset_uninstall_live_runner_denied_dispatch_transcript_contract=present
stage_4_macos_reset_uninstall_live_runner_denied_dispatch_review_contract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_gate_contract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_transcript_contract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_review_contract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_disposition_contract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_disposition_review_contract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_disposition_closeout_contract=presen
t
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_disposition_closeout_audit_contract=
present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_disposition_closeout_audit_review_co
ntract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_disposition_closeout_audit_review_di
sposition_contract=present
stage_4_macos_reset_uninstall_live_runner_acceptance_denial_disposition_closeout_audit_review_di
sposition_review_contract=present
stage_5_codesigning_notarization_plan=future
stage_6_controlled_os_integration_contracts=future
```

Stage 1 records compiler, Rust, architecture, and dependency evidence without installing anything:

```
uname_s_recorded=1
sw_vers_recorded=1
arch_recorded=1
clang_probe_recorded=1
rust_probe_recorded=1
panel_build_probe_recorded=1
c_test_probe_recorded=1
host_mutation_performed=0
network_performed=0
```

Stage 2 adapts the existing installer plan to macOS and still remains dry-run. Stage 3 may write a managed app bundle under the user's home directory only after Stage 2 evidence exists.

Stage 1 is implemented by:

```
docs/MACOS_BUILD_PLATFORM_PROBE.md
scripts/macos-build-platform-probe.sh
docs/status/MACOS_BUILD_PLATFORM_PROBE_STATUS.md
```

Stage 2 is implemented by:

```
docs/MACOS_DRY_RUN_PLAN_ADAPTER.md
scripts/macos-dry-run-plan-adapter.sh
docs/status/MACOS_DRY_RUN_PLAN_ADAPTER_STATUS.md
```

The Stage 3 app bundle contract is implemented by:

```
docs/MACOS_USER_LOCAL_APP_BUNDLE_CONTRACT.md
docs/status/MACOS_USER_LOCAL_APP_BUNDLE_CONTRACT_STATUS.md
```

The Stage 3 app bundle implementation plan is implemented by:

```
docs/MACOS_USER_LOCAL_APP_BUNDLE_IMPLEMENTATION_PLAN.md
docs/status/MACOS_USER_LOCAL_APP_BUNDLE_IMPLEMENTATION_PLAN_STATUS.md
```

The Stage 3 app bundle writer dry-run prototype is implemented by:

```
docs/MACOS_APP_BUNDLE_WRITER_DRY_RUN.md
scripts/macos-app-bundle-writer-dry-run.sh
```

```
docs/status/MACOS_APP_BUNDLE_WRITER_DRY_RUN_STATUS.md
```

The Stage 3 app bundle writer alignment is implemented by:

```
docs/MACOS_APP_BUNDLE_WRITER_ALIGNMENT.md
docs/status/MACOS_APP_BUNDLE_WRITER_ALIGNMENT_STATUS.md
```

The Stage 3 local candidate asset probe is implemented by:

```
docs/MACOS_LOCAL_CANDIDATE_ASSET_PROBE.md
scripts/macos-local-candidate-asset-probe.sh
docs/status/MACOS_LOCAL_CANDIDATE_ASSET_PROBE_STATUS.md
```

The Stage 3 dry-run writer candidate integration is implemented by:

```
docs/MACOS_DRY_RUN_WRITER_CANDIDATE_INTEGRATION.md
scripts/macos-dry-run-writer-candidate-integration.sh
docs/status/MACOS_DRY_RUN_WRITER_CANDIDATE_INTEGRATION_STATUS.md
```

The Stage 3 macOS commit gate contract is implemented by:

```
docs/MACOS_COMMIT_GATE_CONTRACT.md
scripts/macos-commit-gate-contract.sh
docs/status/MACOS_COMMIT_GATE_CONTRACT_STATUS.md
```

The Stage 3 macOS README installer usage alignment is implemented by:

```
README.md
docs/status/MACOS_README_INSTALLER_USAGE_STATUS.md
scripts/test-macos-readme-installer-usage.sh
```

The Stage 4 macOS verification transcript contract is implemented by:

```
docs/MACOS_VERIFICATION_TRANSCRIPT_CONTRACT.md
scripts/macos-verification-transcript-contract.sh
docs/status/MACOS_VERIFICATION_TRANSCRIPT_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall dry-run contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_DRY_RUN_CONTRACT.md
scripts/macos-reset-uninstall-dry-run-contract.sh
docs/status/MACOS_RESET_UNINSTALL_DRY_RUN_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-target classifier is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_TARGET_CLASSIFIER.md
scripts/macos-reset-uninstall-live-target-classifier.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_TARGET_CLASSIFIER_STATUS.md
```

The Stage 4 macOS reset/uninstall dry-run planner is implemented by:

```
docs/MACOS_RESET_UNINSTALL_DRY_RUN_PLANNER.md
scripts/macos-reset-uninstall-dry-run-planner.sh
docs/status/MACOS_RESET_UNINSTALL_DRY_RUN_PLANNER_STATUS.md
```

The Stage 4 macOS reset/uninstall absence-report contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_ABSENCE_REPORT_CONTRACT.md
scripts/macos-reset-uninstall-absence-report-contract.sh
docs/status/MACOS_RESET_UNINSTALL_ABSENCE_REPORT_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall receipt-schema contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_RECEIPT_SCHEMA_CONTRACT.md
scripts/macos-reset-uninstall-receipt-schema-contract.sh
docs/status/MACOS_RESET_UNINSTALL_RECEIPT_SCHEMA_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall implementation-gate contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_IMPLEMENTATION_GATE_CONTRACT.md
scripts/macos-reset-uninstall-implementation-gate-contract.sh
docs/status/MACOS_RESET_UNINSTALL_IMPLEMENTATION_GATE_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall operator-intent contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_OPERATOR_INTENT_CONTRACT.md
scripts/macos-reset-uninstall-operator-intent-contract.sh
docs/status/MACOS_RESET_UNINSTALL_OPERATOR_INTENT_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall effect-authorization contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_EFFECT_AUTHORIZATION_CONTRACT.md
scripts/macos-reset-uninstall-effect-authorization-contract.sh
```

```
docs/status/MACOS_RESET_UNINSTALL_EFFECT_AUTHORIZATION_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall evidence-bundle contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_EVIDENCE_BUNDLE_CONTRACT.md
scripts/macos-reset-uninstall-evidence-bundle-contract.sh
docs/status/MACOS_RESET_UNINSTALL_EVIDENCE_BUNDLE_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-implementation plan contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_IMPLEMENTATION_PLAN_CONTRACT.md
scripts/macos-reset-uninstall-live-implementation-plan-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_IMPLEMENTATION_PLAN_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-execution preflight contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_EXECUTION_PREFLIGHT_CONTRACT.md
scripts/macos-reset-uninstall-live-execution-preflight-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_EXECUTION_PREFLIGHT_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-denial transcript contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_DENIAL_TRANSCRIPT_CONTRACT.md
scripts/macos-reset-uninstall-live-denial-transcript-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_DENIAL_TRANSCRIPT_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner interface contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_INTERFACE_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-interface-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_INTERFACE_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner no-op prototype contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_NOOP_PROTOTYPE_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-noop-prototype-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_NOOP_PROTOTYPE_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner denied-dispatch transcript contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_DENIED_DISPATCH_TRANSCRIPT_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-denied-dispatch-transcript-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_DENIED_DISPATCH_TRANSCRIPT_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner denied-dispatch review contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_DENIED_DISPATCH_REVIEW_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-denied-dispatch-review-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_DENIED_DISPATCH_REVIEW_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner acceptance-gate contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_GATE_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-acceptance-gate-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_GATE_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner acceptance-denial transcript contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_TRANSCRIPT_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-acceptance-denial-transcript-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_TRANSCRIPT_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner acceptance-denial review contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_REVIEW_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-acceptance-denial-review-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_REVIEW_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner acceptance-denial disposition contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_CONTRACT_STATUS.md
```

The Stage 4 macOS reset/uninstall live-runner acceptance-denial disposition review contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_REVIEW_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-review-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_REVIEW_CONTRACT_STAT
US.md
```

The Stage 4 macOS reset/uninstall live-runner acceptance-denial disposition closeout contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_CLOSEOUT_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-closeout-contract.sh
docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_CLOSEOUT_CONTRACT_ST
ATUS.md
```

The Stage 4 macOS reset/uninstall live-runner acceptance-denial disposition closeout audit contract is implemented by:

```
docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_CLOSEOUT_AUDIT_CONTRACT.md
scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-closeout-audit-contract.

docs/status/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_CLOSEOUT_AUDIT_REVIE
W_DISPOSITION_REVIEW_CONTRACT_STATUS.md
```

App Bundle Direction

The macOS Panel should be represented as a managed user-local app bundle:

```
Latticra Panel.app/
  Contents/
    Info.plist
    MacOS/latticra-panel
    Resources/latticra-panel.icns
    Resources/latticra/
```

The first bundle should be local and unsigned or ad-hoc signed only if the build environment requires it. Developer ID signing, hardened runtime, and notarization belong to a later evidence lane.

The app bundle must preserve these limits:

```
root_authority=0
network_authority=0
runtime_enforcement_authority=0
launchagent_authority=0
keychain_authority=0
```

```
tcc_bypass_authority=0
system_extension_authority=0
endpoint_security_authority=0
```

CLI Direction

The current command wrappers can transfer with adjustment. On macOS, the safest first path is:

```
managed_cli_wrappers=$HOME/.local/bin
operator_path_setup=manual_or_panel_report_only
homebrew_prefix_mutation=0
usr_local_mutation=0
opt_homebrew_mutation=0
```

If the operator does not already use ~/.local/bin, the Panel can report the needed shell profile line, but should not mutate shell startup files in the first macOS lane.

macOS Security Interfaces

These macOS-specific interfaces are future-gated and should not be treated as current capability:

```
Keychain=future_contract_only
Secure_Enclave=future_contract_only
TCC_Privacy=future_contract_only
App_Sandbox=future_contract_only
Hardened_Runtime=future_contract_only
Developer_ID_Signing=future_contract_only
Notarization=future_contract_only
LaunchAgent=future_contract_only
Endpoint_Security=future_contract_only
System_Extension=future_contract_only
Network_Extension=future_contract_only
Privileged_Helper=future_contract_only
```

The first macOS work should avoid prompts for Full Disk Access, Contacts, Photos, Screen Recording, Accessibility, Automation, or Developer Tools permissions unless a separate contract and verification lane exists.

Component Mapping

Latticra area	macOS transferability	Required adaptation
Lat	High	Build/test probe on clang and macOS filesystem paths
LIR	High	Build/test probe only
L-UI	High	Terminal-control renderer remains future-gated
Nucleus	High	Keep report-only task boundary
Runtime Boundary	High	Add macOS domain labels later; no enforcement
Latticra Seal	High	Keep report-only; Keychain and Secure Enclave future-gated
Latticra Panel	Medium-high	App bundle, icon, verification, path adapter
Nadia offline AI	Medium-high	Keep contract-only; no model loading, TCC bypass, or network
Fedora/RPM lanes	Low	Keep as Linux-specific evidence, not macOS input
Installer scripts	Medium	Add platform adapter, app bundle writer, macOS verification
Documentation/status	High	Add macOS-specific non-claims and validation records

Evidence Rules

Any macOS public claim should be backed by a dedicated status record and guard script. The claim must say exactly which host, architecture, command, bundle, receipt, and verification path were observed.

Required evidence before saying "macOS user-local install verified":

```
host_os_macos_recorded=1
architecture_recorded=1
panel_build_completed=1
managed_app_bundle_present=1
managed_cli_wrappers_present=1
receipts_present=1
seal_report_only_output_recorded=1
```

```
lat_or_lir_no_effect_probe_recorded=1
uninstall_or_reset_dry_run_recorded=1
root_authority=0
network_authority=0
system_extension_authority=0
endpoint_security_authority=0
production_installer_ready=0
```

Non-Claims

This plan does not implement macOS runtime behavior, host mutation, app bundle generation, installer writes, Keychain access, Secure Enclave access, TCC handling, sandboxing, hardened runtime, notarization, LaunchAgent behavior, Endpoint Security behavior, System Extension behavior, Network Extension behavior, privileged helper behavior, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

Current tracking flags:

```

macos_production_ready=0
```

Previous recommended lane now present:

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Current recommended lane now present:

```
Add a macOS reset/uninstall live-implementation plan contract that maps future effect-authorized
 execution phases while deletion remains disabled.
```

Current preflight lane now present:

```
Add a macOS reset/uninstall live-execution preflight contract that proves the live
implementation plan still cannot delete until all evidence gates are satisfied.
```

Current live-denial transcript lane now present:

```
Add a macOS reset/uninstall live-denial transcript contract that records the failed preflight
decision without deleting files.
```

Current live-runner interface lane now present:

```
Add a macOS reset/uninstall live-runner interface contract that accepts only a passed preflight
and keeps deletion disabled otherwise.
```

Current live-runner no-op prototype lane now present:

```
Add a macOS reset/uninstall live-runner no-op prototype contract that exercises the denied
interface path without deleting files.
```

Current live-runner denied-dispatch transcript lane now present:

```
Add a macOS reset/uninstall live-runner denied-dispatch transcript contract that records the
no-op runner denial without enabling deletion.
```

Current live-runner denied-dispatch review lane now present:

```
Add a macOS reset/uninstall live-runner denied-dispatch review contract that keeps review-only
dispatch denial evidence separate from any effects.
```

Current live-runner acceptance-gate lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-gate contract that keeps the live runner
closed until passed preflight, evidence, authorization, operator intent, and implementation are
all present.
```

Current live-runner acceptance-denial transcript lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial transcript contract that records the
closed acceptance gate without dispatching effects.
```

Current live-runner acceptance-denial review lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial review contract that reviews the
closed gate transcript without enabling dispatch or deletion.
```

Current live-runner acceptance-denial disposition lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition contract that records the
reviewed closed-gate denial as a no-effect disposition without opening dispatch.
```

Current live-runner acceptance-denial disposition review lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition review contract that
reviews the no-effect disposition without opening dispatch or deletion.
```

Current live-runner acceptance-denial disposition closeout lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout contract that
closes the reviewed no-effect disposition without opening dispatch or deletion.
```

Current live-runner acceptance-denial disposition closeout audit lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit contract
that audits the no-effect closeout without opening dispatch or deletion.
```

Current live-runner acceptance-denial disposition closeout audit review lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
contract that reviews the no-effect closeout audit without opening dispatch or deletion.
```

Current live-runner acceptance-denial disposition closeout audit review disposition lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition contract that records the reviewed no-effect closeout audit as a no-effect
disposition without opening dispatch or deletion.
```

Current live-runner acceptance-denial disposition closeout audit review disposition review lane now present:

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition review contract that reviews the no-effect closeout audit review disposition without
 opening dispatch or deletion.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_LOCAL_CANDIDATE_ASSET_PROBE.md

Source title: macOS Local Candidate Asset Probe

Lines: 143 | Words: 396 | SHA-256: 0cd609e69bba7778ed1f5c68ab2d65c11737a16cee7658093806e754e76551ec

macOS Local Candidate Asset Probe

Status: no-effect macOS local candidate asset probe Date: 2026-05-25 CDT Scope: local Panel executable and icon candidate checks before any macOS app bundle writer can become commit-capable.

Purpose

This probe checks caller-supplied local asset candidates for the macOS app bundle dry-run lane.

It follows the writer alignment requirement:

```
local_panel_executable_candidate_probe=1
local_icon_candidate_probe=1
```

The probe does not build, download, sign, notarize, copy, write app bundle files, mutate host state, open the network, or grant authority.

The macOS dry-run writer candidate integration consumes this probe's ready decision and compares it with the app bundle writer dry-run decision. The integration remains no-effect and keeps commit_user_local_managed_artifacts=0. The macOS commit gate contract then keeps the writer path closed, while the macOS verification transcript contract defines the future post-write evidence required before install verification can be claimed.

Command

```
sh scripts/macos-local-candidate-asset-probe.sh --panel-executable &lt;file&gt; --icon &lt;
file&gt;
```

The command writes only a deterministic report to stdout.

Report Fields

The default report includes:

```
MACOS LOCAL CANDIDATE ASSET PROBE
probe_status=ok
probe_mode=macos-local-candidate-asset-probe
panel_executable_candidate=&lt;path-or-none&gt;
panel_candidate_supplied=&lt;0-or-1&gt;
panel_candidate_path_status=&lt;allowed-or-blocked&gt;
panel_candidate_present=&lt;0-or-1&gt;
panel_candidate_file=&lt;0-or-1&gt;
panel_candidate_executable=&lt;0-or-1&gt;
panel_candidate_readable=&lt;0-or-1&gt;
panel_executable_candidate_supplied=&lt;0-or-1&gt;
panel_executable_candidate_path_status=&lt;allowed-or-blocked&gt;
panel_executable_candidate_present=&lt;0-or-1&gt;
panel_executable_candidate_file=&lt;0-or-1&gt;
panel_executable_candidate_executable=&lt;0-or-1&gt;
panel_executable_candidate_readable=&lt;0-or-1&gt;
icon_candidate=&lt;path-or-none&gt;
icon_candidate_supplied=&lt;0-or-1&gt;
icon_candidate_path_status=&lt;allowed-or-blocked&gt;
icon_candidate_present=&lt;0-or-1&gt;
icon_candidate_file=&lt;0-or-1&gt;
icon_candidate_readable=&lt;0-or-1&gt;
icon_candidate_format=&lt;icns-png-svg-ico-or-none&gt;
icon_candidate_supported_format=&lt;0-or-1&gt;
icon_candidate_icns_ready=&lt;0-or-1&gt;
local_panel_executable_candidate_probe=1
local_icon_candidate_probe=1
asset_probe_decision=&lt;decision&gt;
```

Decisions

The probe may report:

```
blocked-missing-panel-executable-candidate
blocked-disallowed-panel-candidate-path
blocked-panel-candidate-not-file
blocked-panel-candidate-not-executable
blocked-panel-candidate-not-readable
blocked-missing-icon-candidate
blocked-disallowed-icon-candidate-path
blocked-icon-candidate-not-file
blocked-icon-candidate-not-readable
blocked-unsupported-icon-candidate
ready-for-dry-run-writer-inputs
```

ready-for-dry-run-writer-inputs means only that the supplied local files are usable as inputs to the dry-run writer report. It is not app bundle evidence, install evidence, signing evidence, notarization evidence, or verification-transcript evidence.

Authority Boundary

The probe preserves:

```
build_performed=0
panel_build_performed=0
icon_conversion_performed=0
download_performed=0
copy_performed=0
signing_performed=0
notarization_performed=0
app_bundle_write_performed=0
info_plist_write_performed=0
app_executable_write_performed=0
app_icon_write_performed=0
```

```
host_mutation_performed=0
network_performed=0
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
runtime_authority_granted=0
production_installer_ready=0
```

Validation

This probe is guarded by:

```
sh scripts/test-macos-local-candidate-asset-probe.sh
```

Expected output:

```
macos_local_candidate_asset_probe: ok
```

The bridge to the writer dry-run is guarded by:

```
sh scripts/test-macos-dry-run-writer-candidate-integration.sh
```

Non-Claims

This probe is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_RESET_UNINSTALL_DRY_RUN_CONTRACT.md

Source title: macOS Reset/Uninstall Dry-Run Contract

Lines: 231 | Words: 506 | SHA-256: 5a0621ff6a5a36aece8065ae85baaf12b271ad1b09d914761732579e5cdafb8f

macOS Reset/Uninstall Dry-Run Contract

Status: no-effect macOS reset/uninstall dry-run contract Date: 2026-05-25 CDT Scope: contract for managed-target removal order before any future macOS user-local app bundle reset or uninstall can run.

Purpose

This contract defines how a future macOS reset/uninstall dry-run must order managed-target removal and preserve user files.

It is contract-only. It does not delete files, remove directories, write receipts, mutate host state, run absence verification, or claim reset/uninstall implementation.

The macOS verification transcript contract can require this reset/uninstall dry-run contract as evidence shape. The macOS reset/uninstall live-target classifier can report present, managed, and unmanaged targets, and the macOS reset/uninstall dry-run planner can turn those states into a no-effect transcript. No reset or uninstall evidence exists yet.

Command

```
sh scripts/macos-reset-uninstall-dry-run-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current reset/uninstall posture is:

```
macos_reset_uninstall_dry_run_contract_present=1
reset_uninstall_dry_run_contract_state=defined-no-effect
reset_uninstall_dry_run_decision=contract-defined-removal-not-performed

macos_reset_uninstall_operator_intent_contract_present=1
macos_reset_uninstall_effect_authorization_contract_present=1
macos_reset_uninstall_evidence_bundle_contract_present=1
macos_reset_uninstall_live_implementation_plan_contract_present=1
macos_reset_uninstall_live_execution_preflight_contract_present=1
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_passed=0
live_execution_preflight_blocking=1
live_execution_preflight_deletion_enabled=0
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0
live_runner_interface_current_decision=deny
live_runner_interface_dispatch_enabled=0
live_runner_interface_runner_handoff_enabled=0
live_implementation_plan_contract_state=defined-no-effect
live_reset_uninstall_implementation_present=0
evidence_bundle_contract_state=defined-no-effect
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_complete=0
effect_authorization_contract_state=closed-no-effect
reset_uninstall_effect_authorized=0
```

```
reset_uninstall_live_run_allowed=0
operator_reset_uninstall_intent_evidence_present=0
reset_receipt_evidence_present=0
reset_uninstall_receipt_evidence_present=0
macos_reset_uninstall_implemented=0
reset_uninstall_implementation_present=0
```

Managed Targets

The future dry-run must bind reset/uninstall evidence to these user-local targets:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
```

Only targets with Latticra managed markers may be removed by a future implementation:

```
managed_marker_required=1
unmanaged_target_preservation_required=1
receipt_outside_removed_prefix_required=1
absence_report_required=1
```

Removal Order

The required reset/uninstall dry-run phases are:

```
reset_phase_1=validate_user_local_targets
reset_phase_2=inspect_managed_markers
reset_phase_3=preserve_unmanaged_targets
reset_phase_4=remove_managed_wrappers
reset_phase_5=remove_managed_app_bundle
reset_phase_6=remove_managed_application_support_prefix
reset_phase_7=write_reset_or_uninstall_receipt_outside_removed_prefix
reset_phase_8=emit_verification_absence_report
```

In this contract, removal phases remain disabled:

```
reset_phase_4_status=disabled
reset_phase_5_status=disabled
reset_phase_6_status=disabled
reset_phase_7_status=disabled
reset_phase_8_status=not-run
```

Preservation Rules

The future reset/uninstall lane must preserve:

```
preserve_user_logs=1
preserve_user_caches=1
preserve_shell_profiles=1
preserve_keychain_items=1
preserve_launchagents=1
preserve_login_items=1
preserve_homebrew_files=1
preserve_applications_root=1
preserve_library_root=1
preserve_system_root=1
preserve_usr_local=1
preserve_opt_homebrew=1
```

Authority Boundary

This contract preserves:

```
managed_wrapper_removal_performed=0
managed_app_bundle_removal_performed=0
managed_application_support_removal_performed=0
reset_receipt_write_performed=0
absence_report_run_performed=0
absence_report_written=0
file_delete_performed=0
directory_delete_performed=0
application_support_write_performed=0
receipt_write_performed=0
app_bundle_write_performed=0
cli_wrapper_write_performed=0
shell_profile_mutation_performed=0
host_mutation_performed=0
```

```
network_performed=0
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
runtime_authority_granted=0
production_installer_ready=0
```

Validation

The follow-on macOS reset/uninstall live-target classifier reads the current user-local target set and reports absent, managed, unmanaged-preserve, or unsafe-path states without deleting files.

The macOS reset/uninstall dry-run planner consumes that classifier output and reports planned managed-target actions without deleting files.

This contract is guarded by:

```
sh scripts/test-macos-reset-uninstall-dry-run-contract.sh
```

Expected output:

```
macos_reset_uninstall_dry_run_contract: ok
```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_RESET_UNINSTALL_DRY_RUN_PLANNER.md

Source title: macOS Reset/Uninstall Dry-Run Planner

Lines: 192 | Words: 434 | SHA-256: 7186fe0b0a5dca26cf2677ef01717a01911c0c8b1c07b4057eaef05c6964983c

macOS Reset/Uninstall Dry-Run Planner

Status: no-effect macOS reset/uninstall dry-run planner Date: 2026-05-25 CDT Scope: dry-run reset/uninstall transcript planner built from the live-target classifier.

Purpose

This planner consumes the macOS reset/uninstall live-target classifier and turns its target states into a reset/uninstall dry-run transcript.

It is report-only. It does not delete files, remove directories, write receipts, mutate host state, run absence verification, open the network, or claim reset/uninstall implementation.

The macOS reset/uninstall absence-report contract now defines the post-removal evidence shape that this planner hands off to.

The macOS reset/uninstall absence-report contract now defines the future evidence shape for the planner's absence-report phase.

Command

```
sh scripts/macos-reset-uninstall-dry-run-planner.sh
```

The command writes only a deterministic report to stdout.

Inputs

The planner consumes:

```
scripts/macos-reset-uninstall-live-target-classifier.sh
macos_reset_uninstall_live_target_classifier_present=1
target_states_recorded=1
```

The same guarded user-local targets are accepted as optional arguments:

```
--app-support-prefix
--app-bundle
--cli-wrapper
--reset-receipts-dir
```

Unsafe target paths are reported and blocked before any dry-run action is planned.

Decisions

The planner can report:

```
reset_uninstall_dry_run_planner_decision=ready-no-targets-observed-no-effect
reset_uninstall_dry_run_planner_decision=planned-managed-target-removal-no-effect
reset_uninstall_dry_run_planner_decision=blocked-unmanaged-targets-preserve-no-effect
reset_uninstall_dry_run_planner_decision=blocked-unsafe-path-no-effect
```

Managed targets become would-remove- dry-run actions only when no unmanaged target blocks the plan. Unmanaged targets are preserved and block managed removal planning.

Example Fields

```

endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
runtime_authority_granted=0
production_installer_ready=0
```

Validation

This planner is guarded by:

```
sh scripts/test-macos-reset-uninstall-dry-run-planner.sh
```

Expected output:

```
macos_reset_uninstall_dry_run_planner: ok
```

Non-Claims

This planner is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

macOS Reset/Uninstall Evidence-Bundle Contract

Status: no-effect macOS reset/uninstall evidence-bundle contract Date: 2026-05-25 CDT Scope: contract for grouping required macOS reset/uninstall implementation-gate, operator-intent, planner, classifier, receipt, and absence evidence before any live execution.

Purpose

This contract defines the future reset/uninstall evidence bundle for macOS. It keeps live managed-target removal and receipt writing disabled until the implementation gate, operator intent, dry-run planner, live-target classifier, reset/uninstall receipt, and absence-report evidence are all present.

It is contract-only. It does not authorize effects, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-evidence-bundle-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current evidence-bundle posture is:

```
macos_reset_uninstall_evidence_bundle_contract_present=1

reset_uninstall_evidence_bundle_required=1
reset_uninstall_evidence_bundle_complete=0
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_valid=0
evidence_bundle_valid=0
reset_uninstall_evidence_bundle_evidence_present=0
reset_uninstall_evidence_bundle_write_enabled=0
reset_uninstall_live_run_allowed=0
reset_uninstall_deletion_enabled=0
managed_target_removal_allowed=0
managed_target_deletion_enabled=0
reset_uninstall_receipt_write_enabled=0
```

Required Bundle Inputs

The future bundle must join the currently separate reset/uninstall contracts:

```
macos_reset_uninstall_implementation_gate_contract_present=1
implementation_gate_contract_state=closed-no-effect
implementation_gate_open=0
implementation_gate_decision=blocked-missing-reset-uninstall-evidence
macos_reset_uninstall_operator_intent_contract_present=1
operator_intent_contract_state=defined-no-effect
operator_reset_uninstall_intent_evidence_required=1
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
operator_intent_evidence_written=0
macos_reset_uninstall_effect_authorization_contract_present=1
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
macos_reset_uninstall_dry_run_planner_present=1
reset_uninstall_dry_run_planner_transcript_present=1
reset_uninstall_dry_run_evidence_present=0
macos_reset_uninstall_live_target_classifier_present=1
live_target_classifier_evidence_present=0
macos_reset_uninstall_receipt_schema_contract_present=1
reset_uninstall_receipt_evidence_present=0
```

```
reset_receipt_evidence_present=0
receipt_schema_evidence_present=0
macos_reset_uninstall_absence_report_contract_present=1
absence_report_evidence_present=0
macos_reset_uninstall_dry_run_contract_present=1
macos_verification_transcript_contract_present=1
macos_commit_gate_contract_present=1
macos_reset_uninstall_implemented=0
reset_uninstall_implementation_present=0
```

Target Scope

Future bundle evidence must stay bound to user-local managed macOS targets and receipt locations:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipt_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/reset-uninstall-receipt.json
absence_report_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/absence-report.txt
```

Bundle Requirements

The future bundle requires:

```
evidence_bundle_schema_version=macos-reset-uninstall-evidence-bundle/1
evidence_bundle_required_component_count=6
evidence_bundle_contract_component_count=6
evidence_bundle_complete_component_count=0
evidence_bundle_requires_implementation_gate_open=1
evidence_bundle_requires_operator_intent_evidence=1
evidence_bundle_requires_dry_run_planner_transcript=1
evidence_bundle_requires_live_target_classifier_report=1
evidence_bundle_requires_reset_uninstall_receipt_evidence=1
evidence_bundle_requires_absence_report_evidence=1
evidence_bundle_requires_effect_authorization_closed_until_complete=1
evidence_bundle_requires_receipt_outside_removed_prefix=1
evidence_bundle_requires_no_unmanaged_targets=1
evidence_bundle_requires_no_unsafe_paths=1
evidence_bundle_requires_no_network=1
evidence_bundle_requires_no_root=1
evidence_bundle_condition_implementation_gate_open=required
evidence_bundle_condition_operator_intent_evidence_present=required
evidence_bundle_condition_dry_run_planner_transcript_present=required
evidence_bundle_condition_live_target_classifier_report_present=required
evidence_bundle_condition_reset_uninstall_receipt_evidence_present=required
evidence_bundle_condition_absence_report_evidence_present=required
evidence_bundle_condition_no_unmanaged_targets=required
evidence_bundle_condition_no_network=required
evidence_bundle_condition_no_root=required
```

The current result state remains incomplete:

```
evidence_bundle_result_implementation_gate_open=not_met
evidence_bundle_result_operator_intent_evidence=not_met
evidence_bundle_result_dry_run_planner_transcript=contract-only
evidence_bundle_result_live_target_classifier_report=contract-only
evidence_bundle_result_reset_uninstall_receipt_evidence=not_met
evidence_bundle_result_absence_report_evidence=not_met
evidence_bundle_result_effect_authorization=closed
evidence_bundle_result_no_unmanaged_targets=not_evaluated_contract_only
evidence_bundle_result_no_network=met
evidence_bundle_result_no_root=met
```

Phases

The future evidence-bundle phases are:

```
evidence_bundle_phase_1=collect_implementation_gate_decision
evidence_bundle_phase_2=collect_operator_intent_evidence
evidence_bundle_phase_3=collect_planner_and_classifier_evidence
evidence_bundle_phase_4=collect_receipt_and_absence_evidence
evidence_bundle_phase_5=validate_complete_bundle
evidence_bundle_phase_6=handoff_to_effect_authorization
evidence_bundle_phase_1_status=contract-only
evidence_bundle_phase_2_status=blocked-missing-operator-intent
```

```
evidence_bundle_phase_3_status=contract-only
evidence_bundle_phase_4_status=blocked-missing-live-receipt-and-absence-evidence
evidence_bundle_phase_5_status=disabled
evidence_bundle_phase_6_status=disabled
```

Authority Boundary

This contract preserves:

```
managed_marker_required=1
unmanaged_target_preservation_required=1
receipt_outside_removed_prefix_required=1
absence_report_required=1
managed_wrapper_removal_performed=0
managed_app_bundle_removal_performed=0
managed_application_support_removal_performed=0
reset_receipt_write_performed=0
absence_report_run_performed=0
absence_report_written=0
file_delete_performed=0
directory_delete_performed=0
application_support_write_performed=0
receipt_write_performed=0
app_bundle_write_performed=0
cli_wrapper_write_performed=0
shell_profile_mutation_performed=0
host_mutation_performed=0
network_performed=0
root_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
runtime_authority_granted=0
production_installer_ready=0
```

Validation

This contract is guarded by:

```
sh scripts/test-macos-reset-uninstall-evidence-bundle-contract.sh
```

Expected output:

```
macos_reset_uninstall_evidence_bundle_contract: ok
```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, live approval evidence, operator approval evidence, effect approval evidence, complete evidence-bundle evidence, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Current completed lane:

```
Add a macOS reset/uninstall live-implementation plan contract that maps future effect-authorized
 execution phases while deletion remains disabled.
```

Source title: macOS Reset/Uninstall Implementation-Gate Contract

Lines: 224 | Words: 453 | SHA-256: 471a224bcf2e9d7379642d0d897a6e8f6dcad97d71cb0be844ddd7e92b774aab

macOS Reset/Uninstall Implementation-Gate Contract

Status: no-effect macOS reset/uninstall implementation-gate contract Date: 2026-05-25 CDT Scope: contract for keeping future reset/uninstall live activity closed until all required macOS evidence exists.

Purpose

This contract defines the gate that a future macOS reset/uninstall implementation must pass before live managed-target removal or receipt writing can be considered.

It is contract-only. It does not delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-implementation-gate-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current implementation-gate posture is:

```
macos_reset_uninstall_implementation_gate_contract_present=1
macos_reset_uninstall_operator_intent_contract_present=1
macos_reset_uninstall_effect_authorization_contract_present=1
macos_reset_uninstall_evidence_bundle_contract_present=1
macos_reset_uninstall_live_implementation_plan_contract_present=1
macos_reset_uninstall_live_execution_preflight_contract_present=1
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_passed=0
live_execution_preflight_blocking=1
live_execution_preflight_deletion_enabled=0
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0
live_runner_interface_current_decision=deny
live_runner_interface_dispatch_enabled=0
live_runner_interface_runner_handoff_enabled=0
live_implementation_plan_contract_state=defined-no-effect
live_reset_uninstall_implementation_present=0
evidence_bundle_contract_state=defined-no-effect
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_complete=0
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
operator_intent_contract_state=defined-no-effect
operator_intent_evidence_written=0
implementation_gate_contract_state=closed-no-effect
implementation_gate_state=closed-no-effect
implementation_gate_decision=blocked-missing-reset-uninstall-evidence
implementation_gate_required=1
implementation_gate_open=0
reset_uninstall_live_run_allowed=0
reset_uninstall_deletion_enabled=0
managed_target_removal_allowed=0
managed_target_deletion_enabled=0
reset_uninstall_receipt_write_enabled=0
```

Required Evidence

The gate stays closed until the reset/uninstall chain has all required evidence:

```
macos_reset_uninstall_receipt_schema_contract_present=1
macos_reset_uninstall_absence_report_contract_present=1
macos_reset_uninstall_dry_run_planner_present=1
reset_uninstall_dry_run_planner_transcript_present=1
macos_reset_uninstall_live_target_classifier_present=1
macos_reset_uninstall_dry_run_contract_present=1
macos_verification_transcript_contract_present=1
macos_commit_gate_contract_present=1
reset_uninstall_dry_run_evidence_present=0
reset_uninstall_receipt_evidence_present=0
reset_receipt_evidence_present=0
receipt_schema_evidence_present=0
absence_report_evidence_present=0
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
```

Target Scope

The future gate must bind evidence to the known user-local macOS targets:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipt_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/reset-uninstall-receipt.json
absence_report_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/absence-report.txt
```

Gate Requirements

The future gate requires:

```
managed_target_classification_required=1
live_target_classifier_evidence_required=1
dry_run_planner_transcript_required=1
receipt_schema_required=1
reset_uninstall_receipt_evidence_required=1

absence_report_evidence_required=1
operator_explicit_reset_uninstall_intent_required=1
operator_intent_must_name_operation=1
operator_intent_must_name_target_scope=1
operator_intent_must_acknowledge_managed_targets_only=1
operator_intent_must_acknowledge_no_unmanaged_removal=1
operator_intent_must_acknowledge_receipt_path=1
```

The gate conditions are:

```
gate_condition_receipt_schema_contract_present=required
gate_condition_absence_report_contract_present=required
gate_condition_dry_run_planner_transcript_present=required
gate_condition_live_target_classifier_present=required
gate_condition_operator_intent_evidence_present=required
gate_condition_no_unmanaged_targets=required
gate_condition_no_unsafe_paths=required
gate_condition_receipt_outside_removed_prefix=required
gate_condition_no_network=required
gate_condition_no_root=required
```

Phases

The future implementation-gate phases are:

```
implementation_gate_phase_1=consume_live_target_classifier
implementation_gate_phase_2=consume_dry_run_planner_transcript
implementation_gate_phase_3=validate_receipt_schema_and_absence_contract
implementation_gate_phase_4=validate_operator_intent
implementation_gate_phase_5=authorize_future_reset_uninstall_implementation
implementation_gate_phase_6=run_live_reset_uninstall
implementation_gate_phase_1_status=contract-only
implementation_gate_phase_2_status=contract-only
implementation_gate_phase_3_status=contract-only
implementation_gate_phase_4_status=contract-only
implementation_gate_phase_5_status=disabled
```

```
implementation_gate_phase_6_status=disabled
```

Authority Boundary

This contract preserves:

```
reset_uninstall_implementation_present=0
macos_reset_uninstall_implemented=0

Source title: macOS Reset/Uninstall Live-Denial Transcript Contract

Lines: 268 | Words: 539 | SHA-256: fbd1b2388b9068d212e37e7b04b307640457d84a9ff66c596b9b87d7a34c7b1c

macOS Reset/Uninstall Live-Denial Transcript Contract

Status: no-effect macOS reset/uninstall live-denial transcript contract Date: 2026-05-26 CDT Scope: contract for recording the failed macOS reset/uninstall live-execution preflight decision without deleting files or writing receipts.

Purpose

This contract defines the transcript emitted after the live-execution preflight remains blocked. It records why live reset/uninstall execution is denied, while preserving the current no-effect boundary.

It is contract-only. It does not authorize effects, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-denial-transcript-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current live-denial transcript posture is:

```
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_contract_decision=denied-by-preflight-block
live_denial_transcript_required=1
live_denial_transcript_present=1
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0
live_runner_interface_current_decision=deny
live_runner_interface_dispatch_enabled=0
live_runner_interface_runner_handoff_enabled=0
live_denial_transcript_receipt_write_enabled=0
live_denial_transcript_absence_report_write_enabled=0
live_denial_transcript_preflight_present=1
live_denial_transcript_preflight_passed=0
live_denial_transcript_denial_recorded=1
live_denial_transcript_denial_reason=missing-complete-evidence-bundle-and-effect-authorization
live_denial_transcript_denial_source=macos-reset-uninstall-live-execution-preflight-contract
live_denial_transcript_effect=none
live_denial_transcript_effect_authorization_required=1
live_denial_transcript_effect_authorized=0
reset_uninstall_live_run_allowed=0
reset_uninstall_deletion_enabled=0
managed_target_removal_allowed=0
managed_target_deletion_enabled=0
reset_uninstall_receipt_write_enabled=0
absence_report_write_enabled=0
```

Preflight Input

The transcript records the failed preflight decision:

```
macos_reset_uninstall_live_execution_preflight_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_contract_decision=blocked-missing-complete-evidence-bundle-and-effect-a
uthorization
live_execution_preflight_required=1
live_execution_preflight_present=1
live_execution_preflight_passed=0
live_execution_preflight_blocking=1
live_execution_preflight_evidence_present=0
live_execution_preflight_record_write_enabled=0
live_execution_preflight_denial_recorded=1
live_execution_preflight_denial_reason=missing-complete-evidence-bundle-and-effect-authorization
```

The underlying gates remain closed:

```
macos_reset_uninstall_live_implementation_plan_contract_present=1
live_implementation_plan_contract_state=defined-no-effect
live_implementation_plan_execution_enabled=0
live_implementation_plan_deletion_enabled=0
live_implementation_plan_preflight_present=1
live_implementation_plan_preflight_passed=0
macos_reset_uninstall_evidence_bundle_contract_present=1
evidence_bundle_contract_state=defined-no-effect
reset_uninstall_evidence_bundle_complete=0
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_valid=0
reset_uninstall_evidence_bundle_evidence_present=0
macos_reset_uninstall_effect_authorization_contract_present=1
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
macos_reset_uninstall_implementation_gate_contract_present=1
implementation_gate_contract_state=closed-no-effect
implementation_gate_open=0
macos_reset_uninstall_operator_intent_contract_present=1
operator_intent_contract_state=defined-no-effect
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
```

Target Scope

The transcript remains limited to user-local managed macOS targets and future receipt locations:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipt_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/reset-uninstall-receipt.json
absence_report_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/absence-report.txt
```

Transcript Requirements

The transcript requires:

```
live_denial_transcript_schema_version=macos-reset-uninstall-live-denial-transcript/1
live_denial_transcript_required_input_count=7
live_denial_transcript_observed_input_count=7
live_denial_transcript_requires_live_execution_preflight=1

```

Validation

This contract is guarded by:

```
sh scripts/test-macos-reset-uninstall-live-denial-transcript-contract.sh
```

Expected output:

```
macos_reset_uninstall_live_denial_transcript_contract: ok
```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, live approval evidence, operator approval evidence, effect approval evidence, complete evidence-bundle evidence, live execution evidence, live reset execution, live uninstall execution, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall live-denial transcript contract that records the failed preflight
decision without deleting files.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Follow-on no-op prototype lane:

```
Add a macOS reset/uninstall live-runner no-op prototype contract that exercises the denied
interface path without deleting files.
```

docs/MACOS_RESET_UNINSTALL_LIVE_EXECUTION_PREFLIGHT_CONTRACT.md

Source title: macOS Reset/Uninstall Live-Execution Preflight Contract

macOS Reset/Uninstall Live-Execution Preflight Contract

Status: no-effect macOS reset/uninstall live-execution preflight contract Date: 2026-05-26 CDT Scope: contract for proving future live macOS reset/uninstall execution remains blocked until every evidence and authorization gate is satisfied.

Purpose

This contract defines the preflight boundary immediately before any future live reset/uninstall executor. It consumes the live-implementation plan, evidence-bundle contract, effect-authorization contract, implementation gate, operator intent, planner, classifier, receipt schema, and absence-report contract.

It is contract-only. It does not authorize effects, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-execution-preflight-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current live-execution preflight posture is:

```
macos_reset_uninstall_live_execution_preflight_contract_present=1

```

Required Inputs

The preflight remains blocked by the current no-effect evidence chain:

```
macos_reset_uninstall_live_implementation_plan_contract_present=1
live_implementation_plan_contract_state=defined-no-effect
live_implementation_plan_execution_enabled=0
live_implementation_plan_deletion_enabled=0
live_implementation_plan_preflight_present=1
live_implementation_plan_preflight_passed=0
macos_reset_uninstall_evidence_bundle_contract_present=1
evidence_bundle_contract_state=defined-no-effect
reset_uninstall_evidence_bundle_complete=0
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_valid=0
reset_uninstall_evidence_bundle_evidence_present=0
macos_reset_uninstall_effect_authorization_contract_present=1
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
macos_reset_uninstall_implementation_gate_contract_present=1
implementation_gate_contract_state=closed-no-effect
implementation_gate_open=0
macos_reset_uninstall_operator_intent_contract_present=1
operator_intent_contract_state=defined-no-effect
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
macos_reset_uninstall_dry_run_planner_present=1
reset_uninstall_dry_run_planner_transcript_present=1
macos_reset_uninstall_live_target_classifier_present=1
macos_reset_uninstall_receipt_schema_contract_present=1
macos_reset_uninstall_absence_report_contract_present=1
macos_reset_uninstall_dry_run_contract_present=1
macos_verification_transcript_contract_present=1
macos_commit_gate_contract_present=1
```

Target Scope

The preflight remains limited to user-local managed macOS targets and receipt locations:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipt_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/reset-uninstall-receipt.json
absence_report_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/absence-report.txt
```

Preflight Requirements

The future preflight requires:

```
live_execution_preflight_schema_version=macos-reset-uninstall-live-execution-preflight/1
live_execution_preflight_required_component_count=9
live_execution_preflight_passed_component_count=0
live_execution_preflight_requires_live_implementation_plan=1
live_execution_preflight_requires_complete_evidence_bundle=1
live_execution_preflight_requires_effect_authorization=1
live_execution_preflight_requires_implementation_gate_open=1
live_execution_preflight_requires_operator_intent_evidence=1
live_execution_preflight_requires_dry_run_planner_transcript=1
live_execution_preflight_requires_live_target_classifier_report=1
```

```
live_execution_preflight_requires_receipt_schema=1
live_execution_preflight_requires_absence_report_contract=1
live_execution_preflight_requires_no_unmanaged_targets=1
live_execution_preflight_requires_no_unsafe_paths=1
live_execution_preflight_requires_no_network=1
live_execution_preflight_requires_no_root=1
live_execution_preflight_condition_live_implementation_plan=required
live_execution_preflight_condition_complete_evidence_bundle=required
live_execution_preflight_condition_effect_authorization=required
live_execution_preflight_condition_implementation_gate_open=required
live_execution_preflight_condition_operator_intent_evidence_present=required
live_execution_preflight_condition_no_unmanaged_targets=required
live_execution_preflight_condition_no_network=required
live_execution_preflight_condition_no_root=required
```

The current result state remains closed:

```
live_execution_preflight_result_live_implementation_plan=planned-no-effect
live_execution_preflight_result_complete_evidence_bundle=not_met
live_execution_preflight_result_effect_authorization=not_met

```

Validation

This contract is guarded by:

```
sh scripts/test-macos-reset-uninstall-live-execution-preflight-contract.sh
```

Expected output:

```
macos_reset_uninstall_live_execution_preflight_contract: ok
```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, live approval evidence, operator approval evidence, effect approval evidence, complete evidence-bundle evidence, live execution evidence, live reset execution, live uninstall execution, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall live-execution preflight contract that proves the live
implementation plan still cannot delete until all evidence gates are satisfied.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Follow-on no-op prototype lane:

```
Add a macOS reset/uninstall live-runner no-op prototype contract that exercises the denied
interface path without deleting files.
```

docs/MACOS_RESET_UNINSTALL_LIVE_IMPLEMENTATION_PLAN_CONTRACT.md

Source title: macOS Reset/Uninstall Live-Implementation Plan Contract

Lines: 251 | Words: 530 | SHA-256: c7241ed4172e9ed436b086252bda8e313487753b40639ba4287adf2aa7632b6d

macOS Reset/Uninstall Live-Implementation Plan Contract

Status: no-effect macOS reset/uninstall live-implementation plan contract Date: 2026-05-25 CDT Scope: contract for mapping future effect-authorized macOS reset/uninstall phases while deletion remains disabled.

Purpose

This contract defines the future live reset/uninstall implementation plan for macOS. It maps the order in which a future effect-authorized implementation would load evidence, resolve managed targets, preserve unmanaged targets, write receipts, write absence reports, and emit verification evidence.

It is contract-only. It does not authorize effects, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-implementation-plan-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current live-implementation plan posture is:

```
macos_reset_uninstall_live_implementation_plan_contract_present=1
macos_reset_uninstall_live_execution_preflight_contract_present=1
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_passed=0

live_execution_preflight_deletion_enabled=0
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0
live_runner_interface_current_decision=deny
live_runner_interface_dispatch_enabled=0
live_runner_interface_runner_handoff_enabled=0
live_implementation_plan_contract_state=defined-no-effect
live_implementation_plan_contract_decision=blocked-deletion-disabled-and-evidence-incomplete
live_implementation_plan_required=1
live_implementation_plan_complete=0
live_implementation_plan_execution_enabled=0
live_implementation_plan_deletion_enabled=0
live_implementation_plan_receipt_write_enabled=0
live_implementation_plan_absence_write_enabled=0
live_implementation_plan_preflight_required=1
live_implementation_plan_preflight_present=1
reset_uninstall_live_run_allowed=0
reset_uninstall_deletion_enabled=0
managed_target_removal_allowed=0
managed_target_deletion_enabled=0
reset_uninstall_receipt_write_enabled=0
```

Required Gates

The future plan remains blocked until the existing reset/uninstall evidence chain is complete:

```
macos_reset_uninstall_evidence_bundle_contract_present=1
evidence_bundle_contract_state=defined-no-effect
reset_uninstall_evidence_bundle_required=1
reset_uninstall_evidence_bundle_complete=0
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_valid=0
reset_uninstall_evidence_bundle_evidence_present=0
macos_reset_uninstall_effect_authorization_contract_present=1
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
macos_reset_uninstall_implementation_gate_contract_present=1
implementation_gate_contract_state=closed-no-effect
implementation_gate_open=0
macos_reset_uninstall_operator_intent_contract_present=1
operator_intent_contract_state=defined-no-effect
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
macos_reset_uninstall_dry_run_planner_present=1
reset_uninstall_dry_run_planner_transcript_present=1
macos_reset_uninstall_live_target_classifier_present=1
macos_reset_uninstall_receipt_schema_contract_present=1
macos_reset_uninstall_absence_report_contract_present=1
macos_reset_uninstall_dry_run_contract_present=1
macos_verification_transcript_contract_present=1
```

```
macos_commit_gate_contract_present=1
```

Target Scope

The future implementation plan is limited to user-local managed targets:

```
live_implementation_plan_target_scope=user-local-managed-only
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel

```

docs/MACOS_RESET_UNINSTALL_LIVE_RUNNER_ACCEPTANCE_DENIAL_DISPOSITION_CLOSEOUT_AUDIT_CONTRACT.md

Source title: macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Contract

Lines: 214 | Words: 415 | SHA-256: 2acdbf61720ceca14d643366a3959052333838cc321205eb61c52073cfa217a4

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial disposition closeout audit contract Date: 2026-05-26 CDT Scope: audit contract for the no-effect disposition closeout without enabling dispatch or deletion.

Purpose

This contract audits the macOS reset/uninstall live-runner acceptance-denial disposition closeout. It confirms that the reviewed no-effect disposition remains closed, the acceptance gate remains closed, and no runner dispatch or deletion authority is opened.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, perform a live reset/uninstall, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-closeout-audit-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

```

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Review Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review contract Date: 2026-05-26 CDT Scope: review contract for the no-effect disposition closeout audit without enabling dispatch or deletion.

Purpose

This contract reviews the macOS reset/uninstall live-runner acceptance-denial disposition closeout audit. It confirms that the no-effect closeout audit remains review-only, the acceptance gate remains closed, and no runner dispatch or deletion authority is opened.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, perform a live reset/uninstall, open the next disposition, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-closeout-audit-review
-contract.sh
```

The command writes only a deterministic report to stdout.

Source title: macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Review Disposition Contract

Lines: 203 | Words: 419 | SHA-256: 434e5cd688557738db01b3b83719228f5694ee31490951b590d42c468f913a67

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Review Disposition Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition contract Date: 2026-05-26 CDT Scope: disposition contract for the reviewed no-effect closeout audit without enabling dispatch or deletion.

Purpose

This contract records the reviewed macOS reset/uninstall live-runner acceptance-denial disposition closeout audit as a no-effect disposition. It confirms that the closeout audit review is present, the acceptance gate remains closed, and the disposition remains evidence-only.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, apply a disposition, open the future review, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-closeout-audit-review
-disposition-contract.sh
```

The command writes only a deterministic report to stdout.

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Audit Review Disposition Review Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition review contract Date: 2026-05-26 CDT Scope: review contract for the no-effect closeout audit review disposition without enabling dispatch or deletion.

Purpose

This contract reviews the recorded macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review disposition. It confirms that the prior disposition is present, remains no-effect, and is reviewed only as stdout evidence.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, apply a disposition, open the future closeout, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-closeout-audit-review
-disposition-review-contract.sh
```

The command writes only a deterministic report to stdout.

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Closeout Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial disposition closeout contract Date: 2026-05-26 CDT Scope: closeout contract for the reviewed no-effect disposition without enabling dispatch or deletion.

Purpose

This contract closes the reviewed macOS reset/uninstall live-runner acceptance-denial disposition. It confirms that the disposition remains no-effect, the acceptance gate remains closed, and no runner dispatch or deletion authority is opened.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, release the runner, open audit effects, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-closeout-contract.sh
```

The command writes only a deterministic report to stdout.

Source title: macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Contract

Lines: 233 | Words: 426 | SHA-256: 0800bcf2c0c6c941acfd7dedbb9c89b84f931e60d8ae1a820708285fbb1d7d64

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial disposition contract Date: 2026-05-26 CDT Scope: disposition contract for the reviewed closed-gate denial without enabling dispatch or deletion.

Purpose

This contract records the reviewed macOS reset/uninstall live-runner acceptance-denial as a no-effect disposition. It confirms that the acceptance gate remained closed, the denial review is present, and the disposition remains evidence-only.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, apply a disposition, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-contract.sh
```

The command writes only a deterministic report to stdout.

Lines: 238 | Words: 430 | SHA-256: 898abbb39db953ce6f6f54ffb50c6d2eb61e7fe50a419e2eb827ab8fbd16fff2

macOS Reset/Uninstall Live-Runner Acceptance-Denial Disposition Review Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial disposition review contract Date: 2026-05-26 CDT Scope: review contract for the recorded no-effect disposition without enabling dispatch or deletion.

Purpose

This contract reviews the macOS reset/uninstall live-runner acceptance-denial disposition. It confirms that the disposition remains no-effect, the acceptance gate remains closed, and no runner dispatch or deletion authority is opened.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, close out the disposition, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-disposition-review-contract.sh
```

The command writes only a deterministic report to stdout.

macOS Reset/Uninstall Live-Runner Acceptance-Denial Review Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial review contract Date: 2026-05-26 CDT Scope: review contract for the closed acceptance-gate transcript without enabling dispatch or deletion.

Purpose

This contract reviews the macOS reset/uninstall live-runner acceptance-denial transcript. It confirms that the acceptance gate remained closed, the denial reason is present, and the review remains evidence-only.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, grant runtime authority, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-review-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, live reset execution, live uninstall execution, runner dispatch evidence, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Endpoint Security evidence, System Extension evidence, privileged helper evidence, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial review contract that reviews the
closed gate transcript without enabling dispatch or deletion.
```

Next Recommended Lane

The next lane should add a disposition contract so the reviewed closed-gate denial has a recorded no-effect disposition before any future dispatch work is reconsidered.

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

macOS Reset/Uninstall Live-Runner Acceptance-Denial Transcript Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-denial transcript contract Date: 2026-05-26 CDT Scope: transcript contract for recording the closed acceptance gate without runner dispatch.

Purpose

This contract records the macOS reset/uninstall live-runner acceptance denial after the acceptance gate remains closed. It preserves the gate decision as a stdout-only transcript and keeps dispatch, deletion, receipts, absence reports, host mutation, network access, root authority, runtime authority, and implementation claims disabled.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-denial-transcript-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

macOS Reset/Uninstall Live-Runner Acceptance-Gate Contract

Status: no-effect macOS reset/uninstall live-runner acceptance-gate contract Date: 2026-05-26 CDT Scope: contract for deciding whether the live runner may dispatch after a denied-dispatch review.

Purpose

This contract evaluates the macOS reset/uninstall live-runner acceptance gate. It records that the denied-dispatch review is present, then keeps the gate closed because passed preflight, complete evidence, explicit effect authorization, operator intent, and implementation evidence are not all present.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-acceptance-gate-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

```
macos_reset_uninstall_live_runner_acceptance_gate_contract_present=1

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, live reset execution, live uninstall execution, runner dispatch evidence, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Endpoint Security evidence, System Extension evidence, privileged helper evidence, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-gate contract that keeps the live runner
closed until passed preflight, evidence, authorization, operator intent, and implementation are
all present.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Source title: macOS Reset/Uninstall Live-Runner Denied-Dispatch Review Contract

Lines: 217 | Words: 410 | SHA-256: 2f78bf208f25a9b3bf2eed6ed981fc2193049dfa73e65d57e800bb0dbdc508c1

macOS Reset/Uninstall Live-Runner Denied-Dispatch Review Contract

Status: no-effect macOS reset/uninstall live-runner denied-dispatch review contract Date: 2026-05-26 CDT Scope: contract for reviewing the denied-dispatch transcript without enabling dispatch or deletion.

Purpose

This contract reviews the macOS reset/uninstall live-runner denied-dispatch transcript. The review records that the denial evidence is present, that the denial reason is still the failed preflight and denied interface path, and that dispatch remains blocked.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-denied-dispatch-review-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

macOS Reset/Uninstall Live-Runner Denied-Dispatch Transcript Contract

Status: no-effect macOS reset/uninstall live-runner denied-dispatch transcript contract Date: 2026-05-26 CDT Scope: contract for recording the no-op live-runner dispatch denial without enabling deletion.

Purpose

This contract records the denied-dispatch result from the macOS reset/uninstall live-runner no-op prototype. The predecessor path reaches only the denied interface branch because the live-execution preflight is still blocked.

It is contract-only. It does not authorize effects, dispatch a runner, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-denied-dispatch-transcript-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

production_installer_ready=0
```

Validation

```
sh scripts/test-macos-reset-uninstall-live-runner-denied-dispatch-transcript-contract.sh
```

Expected output:

```
macos_reset_uninstall_live_runner_denied_dispatch_transcript_contract: ok
```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, live reset execution, live uninstall execution, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Endpoint Security evidence, System Extension evidence, privileged helper evidence, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall live-runner denied-dispatch transcript contract that records the
no-op runner denial without enabling deletion.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Source title: macOS Reset/Uninstall Live-Runner Interface Contract

Lines: 287 | Words: 554 | SHA-256: 301c26698537f280ce8ada9c0acc678f48183ef5bdd4093aca89429cbdac099d

macOS Reset/Uninstall Live-Runner Interface Contract

Status: no-effect macOS reset/uninstall live-runner interface contract Date: 2026-05-26 CDT Scope: contract for the future live reset/uninstall runner entrypoint while accepting only a passed preflight.

Purpose

This contract defines the future macOS reset/uninstall live-runner interface. The interface accepts only a passed live-execution preflight and keeps the denial path active while the current preflight remains blocked.

It is contract-only. It does not invoke a runner, authorize effects, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-interface-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current live-runner interface posture is:

```
macos_reset_uninstall_live_runner_interface_contract_present=1
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_contract_decision=denied-current-preflight-not-passed
live_runner_interface_required=1
live_runner_interface_present=1
live_runner_interface_entrypoint_defined=1
live_runner_interface_entrypoint_name=latticra-macos-reset-uninstall-live-runner
live_runner_interface_accepts_only_passed_preflight=1
live_runner_interface_accepts_passed_preflight_only=1
live_runner_interface_preflight_present=1
live_runner_interface_preflight_passed=0
live_runner_interface_denial_transcript_present=1
live_runner_interface_denial_transcript_recorded=1
live_runner_interface_invocation_enabled=0
live_runner_interface_handoff_enabled=0
live_runner_interface_runner_enabled=0
live_runner_interface_deletion_enabled=0
```

```
live_runner_interface_receipt_write_enabled=0
live_runner_interface_absence_write_enabled=0
live_runner_interface_absence_report_write_enabled=0
live_runner_interface_denial_path_active=1
live_runner_interface_accept_path_active=0
live_runner_interface_effect=none
live_runner_interface_effect_authorization_required=1
live_runner_interface_effect_authorized=0
reset_uninstall_live_run_allowed=0
reset_uninstall_deletion_enabled=0
managed_target_removal_allowed=0
managed_target_deletion_enabled=0
reset_uninstall_receipt_write_enabled=0
absence_report_write_enabled=0
```

Predecessor Inputs

The interface records the live-denial transcript and failed preflight it depends on:

```
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_contract_decision=denied-by-preflight-block
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0
live_runner_interface_current_decision=deny
live_runner_interface_dispatch_enabled=0
live_runner_interface_runner_handoff_enabled=0
live_denial_transcript_preflight_passed=0
live_denial_transcript_denial_reason=missing-complete-evidence-bundle-and-effect-authorization
macos_reset_uninstall_live_execution_preflight_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_contract_decision=blocked-missing-complete-evidence-bundle-and-effect-a
uthorization
live_execution_preflight_required=1
live_execution_preflight_present=1
live_execution_preflight_passed=0
live_execution_preflight_blocking=1
live_execution_preflight_evidence_present=0
live_execution_preflight_record_write_enabled=0
live_execution_preflight_denial_recorded=1
live_execution_preflight_denial_reason=missing-complete-evidence-bundle-and-effect-authorization
```

The underlying gates remain closed:

```
macos_reset_uninstall_live_implementation_plan_contract_present=1
live_implementation_plan_contract_state=defined-no-effect
live_implementation_plan_execution_enabled=0
live_implementation_plan_deletion_enabled=0
live_implementation_plan_preflight_present=1
live_implementation_plan_preflight_passed=0
macos_reset_uninstall_evidence_bundle_contract_present=1
evidence_bundle_contract_state=defined-no-effect
reset_uninstall_evidence_bundle_complete=0
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_valid=0
reset_uninstall_evidence_bundle_evidence_present=0
macos_reset_uninstall_effect_authorization_contract_present=1
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
macos_reset_uninstall_implementation_gate_contract_present=1
implementation_gate_contract_state=closed-no-effect
implementation_gate_open=0
macos_reset_uninstall_operator_intent_contract_present=1
operator_intent_contract_state=defined-no-effect
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
```

Target Scope

The interface remains limited to user-local managed macOS targets and future receipt locations:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
```

```
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipt_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/reset-uninstall-receipt.json
absence_report_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/absence-report.txt
```

Interface Requirements

The interface requires:

```
live_runner_interface_schema_version=macos-reset-uninstall-live-runner-interface/1
live_runner_interface_required_input_count=8
live_runner_interface_observed_input_count=8
live_runner_interface_requires_passed_preflight=1

macOS Reset/Uninstall Live-Runner No-Op Prototype Contract

Status: no-effect macOS reset/uninstall live-runner no-op prototype contract Date: 2026-05-26 CDT Scope: contract for exercising the denied live-runner interface path without deleting files.

Purpose

This contract defines a no-op prototype for the future macOS reset/uninstall live runner. It exercises only the denied interface path because the live-execution preflight is still blocked.

It is contract-only. It does not authorize effects, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-runner-noop-prototype-contract.sh
```

The command writes only a deterministic report to stdout.

docs/MACOS_RESET_UNINSTALL_LIVE_TARGET_CLASSIFIER.md

Source title: macOS Reset/Uninstall Live-Target Classifier

Lines: 222 | Words: 468 | SHA-256: 3ee2ed6805b20797f7a1eebcbb03b5a3fb35fd7c03abdd36ab359c83ef9c6f7a

macOS Reset/Uninstall Live-Target Classifier

Status: no-effect macOS reset/uninstall live-target classifier Date: 2026-05-25 CDT Scope: read-only classifier for current macOS user-local reset/uninstall targets.

Purpose

This classifier reports what exists today at the macOS reset/uninstall targets for the macOS reset/uninstall dry-run planner.

It is read-only. It does not delete files, remove directories, write receipts, mutate host state, run absence verification, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-live-target-classifier.sh
```

The command writes only a deterministic report to stdout.

Target States

The classifier records these target states:

```
absent
managed
unmanaged-preserve
not-classified-unsafe-path
```

It uses the same managed marker shape as the macOS app-bundle writer dry-run:

```
LATTICRA_INSTALLER_MANAGED=1
LATTICRA_MACOS_USER_LOCAL_APP_BUNDLE=1
```

Directory targets are managed only when the marker exists at one of these locations:

```
Contents/Resources/latticra/MANAGED_BY_LATTICRA
MANAGED_BY_LATTICRA
```

File targets are managed only when the file itself contains both marker lines.

Classified Targets

The live classifier is bound to the current user-local macOS targets:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipts_dir_preservation=preserve-outside-removed-prefix
```

Decisions

The classifier can report:

```
reset_uninstall_live_classifier_decision=ready-no-targets-observed-no-effect
```

```
reset_uninstall_live_classifier_decision=ready-managed-targets-observed-no-effect
reset_uninstall_live_classifier_decision=blocked-unmanaged-targets-preserve
reset_uninstall_live_classifier_decision=blocked-unsafe-path
```

An unmanaged target is never overwritten or removed. It is classified as unmanaged-preserve and blocks future reset/uninstall progress until an operator resolves it outside this no-effect lane.

Example Fields

```

production_installer_ready=0
```

Validation

This classifier is guarded by:

```
sh scripts/test-macos-reset-uninstall-live-target-classifier.sh
```

Expected output:

```
macos_reset_uninstall_live_target_classifier: ok
```

Non-Claims

This classifier is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```

docs/MACOS_RESET_UNINSTALL_OPERATOR_INTENT_CONTRACT.md

Source title: macOS Reset/Uninstall Operator-Intent Contract

Lines: 261 | Words: 508 | SHA-256: 1310251ce00a7712d026a87d4afee083c5e378285d564743f1f3d7488642c411

macOS Reset/Uninstall Operator-Intent Contract

Status: no-effect macOS reset/uninstall operator-intent contract Date: 2026-05-25 CDT Scope: contract for future explicit operator approval evidence before any live macOS reset/uninstall activity.

Purpose

This contract defines the explicit operator-intent evidence that a future macOS reset/uninstall implementation must collect before any live managed-target removal or reset/uninstall receipt writing can be considered.

It is contract-only. It does not prompt for approval, infer approval, delete files, remove directories, write receipts, write absence reports, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-operator-intent-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current operator-intent posture is:

```
macos_reset_uninstall_operator_intent_contract_present=1
macos_reset_uninstall_effect_authorization_contract_present=1
macos_reset_uninstall_evidence_bundle_contract_present=1
macos_reset_uninstall_live_implementation_plan_contract_present=1
macos_reset_uninstall_live_execution_preflight_contract_present=1
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_passed=0
live_execution_preflight_blocking=1
live_execution_preflight_deletion_enabled=0
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0

managed_target_deletion_enabled=0
reset_uninstall_receipt_write_enabled=0
```

Required Evidence Chain

Future operator-intent evidence must bind to the closed implementation gate and the reset/uninstall evidence contracts:

```
macos_reset_uninstall_implementation_gate_contract_present=1
macos_reset_uninstall_operator_intent_contract_present=1
macos_reset_uninstall_effect_authorization_contract_present=1
macos_reset_uninstall_evidence_bundle_contract_present=1
macos_reset_uninstall_live_implementation_plan_contract_present=1
macos_reset_uninstall_live_execution_preflight_contract_present=1
macos_reset_uninstall_live_denial_transcript_contract_present=1
macos_reset_uninstall_live_runner_interface_contract_present=1
live_execution_preflight_contract_state=closed-no-effect
live_execution_preflight_passed=0
live_execution_preflight_blocking=1
live_execution_preflight_deletion_enabled=0
live_denial_transcript_contract_state=recorded-no-effect
live_denial_transcript_recorded=1
live_denial_transcript_stdout_only=1
live_denial_transcript_file_write_enabled=0
live_runner_interface_contract_state=defined-no-effect
live_runner_interface_current_preflight_passed=0
live_runner_interface_current_decision=deny
live_runner_interface_dispatch_enabled=0
live_runner_interface_runner_handoff_enabled=0
live_implementation_plan_contract_state=defined-no-effect
live_reset_uninstall_implementation_present=0
evidence_bundle_contract_state=defined-no-effect
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_complete=0
effect_authorization_contract_state=closed-no-effect
reset_uninstall_effect_authorized=0
implementation_gate_contract_state=closed-no-effect
implementation_gate_decision=blocked-missing-reset-uninstall-evidence
macos_reset_uninstall_receipt_schema_contract_present=1
macos_reset_uninstall_absence_report_contract_present=1
macos_reset_uninstall_dry_run_planner_present=1
reset_uninstall_dry_run_planner_transcript_present=1
macos_reset_uninstall_live_target_classifier_present=1
macos_reset_uninstall_dry_run_contract_present=1
macos_verification_transcript_contract_present=1
macos_commit_gate_contract_present=1
reset_uninstall_dry_run_evidence_present=0
reset_uninstall_receipt_evidence_present=0
reset_receipt_evidence_present=0
receipt_schema_evidence_present=0
absence_report_evidence_present=0
```

Target Scope

The future approval evidence must name these user-local macOS targets and receipt locations:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipt_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/reset-uninstall-receipt.json
absence_report_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/absence-report.txt
```

Intent Requirements

The future approval evidence must be explicit, current, and scoped:

```
operator_intent_evidence_format=text-transcript
operator_intent_schema_version=macos-reset-uninstall-operator-intent/1
operator_intent_digest_algorithm=sha256
operator_intent_must_be_explicit=1
operator_intent_must_be_current_session=1
operator_intent_must_not_be_inferred=1
operator_intent_must_not_be_defaulted=1
operator_intent_must_not_be_from_previous_session=1
operator_intent_must_name_operation=1
operator_intent_operation_values=reset,uninstall
operator_intent_must_name_target_scope=1
```

```
operator_intent_target_scope=user-local-managed-targets-only
operator_intent_must_acknowledge_managed_targets_only=1
operator_intent_must_acknowledge_no_unmanaged_removal=1
operator_intent_must_acknowledge_receipt_path=1
operator_intent_must_acknowledge_absence_report_path=1
operator_intent_must_acknowledge_no_network=1
operator_intent_must_acknowledge_no_root=1
operator_intent_must_acknowledge_live_classifier_digest=1
operator_intent_must_acknowledge_dry_run_planner_digest=1
operator_intent_field_dry_run_planner_transcript_digest_required=1
operator_intent_field_live_classifier_digest_required=1
operator_intent_field_receipt_schema_digest_required=1
operator_intent_field_absence_report_contract_digest_required=1
operator_intent_field_confirmation_text_required=1
operator_intent_scope_must_match_live_classifier=1
operator_intent_scope_must_match_dry_run_planner=1
operator_intent_confirmation_phrase_required=1
operator_intent_confirmation_phrase_future=reset-or-uninstall-latticra-user-local-managed-target
s
operator_intent_transcript_required=1
```

Phases

The future operator-intent phases are:

```
operator_intent_phase_1=present_live_target_classifier_summary
operator_intent_phase_2=present_dry_run_planner_summary
operator_intent_phase_3=present_receipt_and_absence_report_paths
operator_intent_phase_4=request_explicit_operator_intent
operator_intent_phase_5=record_operator_intent_evidence
operator_intent_phase_6=allow_future_implementation_gate_open
operator_intent_phase_1_status=contract-only
operator_intent_phase_2_status=contract-only
operator_intent_phase_3_status=contract-only
operator_intent_phase_4_status=contract-only
operator_intent_phase_5_status=disabled
operator_intent_phase_6_status=disabled
```

Authority Boundary

This contract preserves:

```
reset_uninstall_implementation_present=0
macos_reset_uninstall_implemented=0
managed_marker_required=1
unmanaged_target_preservation_required=1
receipt_outside_removed_prefix_required=1
absence_report_required=1
managed_wrapper_removal_performed=0
managed_app_bundle_removal_performed=0
managed_application_support_removal_performed=0

system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
runtime_authority_granted=0
production_installer_ready=0
```

Validation

This contract is guarded by:

```
sh scripts/test-macos-reset-uninstall-operator-intent-contract.sh
```

Expected output:

```
macos_reset_uninstall_operator_intent_contract: ok
```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, live approval evidence, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

Source title: macOS Reset/Uninstall Receipt-Schema Contract

Lines: 208 | Words: 428 | SHA-256: 040beb81952180bdb4216884594687d0eb0bb6340a6f7fe4f0d59e0851ec4cb9

macOS Reset/Uninstall Receipt-Schema Contract

Status: no-effect macOS reset/uninstall receipt-schema contract Date: 2026-05-25 CDT Scope: contract for future reset/uninstall receipts stored outside the removed prefix.

Purpose

This contract defines the receipt schema that a future macOS reset/uninstall implementation must use when recording reset or uninstall evidence.

It is contract-only. It does not write receipts, delete files, remove directories, inspect post-removal state, mutate host state, open the network, or claim reset/uninstall implementation.

Command

```
sh scripts/macos-reset-uninstall-receipt-schema-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current receipt-schema posture is:

```
macos_reset_uninstall_receipt_schema_contract_present=1
macos_reset_uninstall_implementation_gate_contract_present=1
macos_reset_uninstall_operator_intent_contract_present=1
macos_reset_uninstall_effect_authorization_contract_present=1

evidence_bundle_contract_state=defined-no-effect
evidence_bundle_complete=0
reset_uninstall_evidence_bundle_complete=0
effect_authorization_contract_state=closed-no-effect
effect_authorization_open=0
reset_uninstall_effect_authorized=0
operator_intent_contract_state=defined-no-effect
operator_intent_evidence_written=0
reset_uninstall_live_run_allowed=0
reset_uninstall_deletion_enabled=0
operator_reset_uninstall_intent_evidence_present=0
operator_explicit_reset_uninstall_intent_observed=0
receipt_schema_contract_state=defined-no-effect
receipt_schema_contract_decision=contract-defined-receipt-not-written
receipt_schema_required=1
reset_uninstall_receipt_evidence_present=0
reset_receipt_evidence_present=0
receipt_schema_evidence_present=0
reset_receipt_write_performed=0
receipt_write_performed=0
receipt_written=0
```

Required Inputs

A future reset/uninstall receipt must bind to the existing no-effect macOS reset/uninstall chain:

```
macos_reset_uninstall_absence_report_contract_present=1
macos_reset_uninstall_dry_run_planner_present=1
reset_uninstall_dry_run_planner_transcript_present=1
macos_reset_uninstall_live_target_classifier_present=1
macos_reset_uninstall_dry_run_contract_present=1
macos_verification_transcript_contract_present=1
absence_report_evidence_present=0
reset_uninstall_dry_run_evidence_present=0
```

Receipt Location

The future receipt must live outside the removed application-support prefix:

```
app_support_prefix_target=$HOME/Library/Application Support/Latticra
app_bundle_target=$HOME/Applications/Latticra Panel.app
cli_wrapper_target=$HOME/.local/bin/latticra-panel
reset_receipts_dir_target=$HOME/Library/Application Support/Latticra Reset Receipts
reset_receipt_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/reset-uninstall-receipt.json
absence_report_path_future=$HOME/Library/Application Support/Latticra Reset
Receipts/absence-report.txt
receipt_must_be_outside_removed_prefix=1
removed_prefix_must_not_contain_receipt=1
```

Schema Fields

The future receipt format is:

```
receipt_format=json
receipt_schema_version=macos-reset-uninstall-receipt/1
receipt_digest_algorithm=sha256
receipt_operation_values=reset,uninstall
```

The future receipt must include:

```
receipt_field_schema_version_required=1
receipt_field_operation_required=1
receipt_field_host_identity_required=1
receipt_field_architecture_required=1
receipt_field_started_at_required=1
receipt_field_completed_at_required=1
receipt_field_planner_transcript_digest_required=1
receipt_field_live_classifier_digest_required=1
```

```
receipt_field_absence_report_path_required=1
receipt_field_target_actions_required=1
receipt_field_removed_managed_targets_required=1
receipt_field_preserved_unmanaged_targets_required=1
receipt_field_authority_denials_required=1
receipt_field_no_network_required=1
receipt_field_no_root_required=1
```

Phases

The future receipt-schema phases are:

```
receipt_schema_phase_1=consume_dry_run_planner_transcript
receipt_schema_phase_2=consume_absence_report_contract
receipt_schema_phase_3=validate_outside_removed_prefix_path
receipt_schema_phase_4=record_target_action_summary
receipt_schema_phase_5=record_authority_denials
receipt_schema_phase_6=write_reset_uninstall_receipt
receipt_schema_phase_6_status=disabled
```

Authority Boundary

This contract preserves:

```
managed_wrapper_removal_performed=0
managed_app_bundle_removal_performed=0
managed_application_support_removal_performed=0
reset_receipt_write_performed=0
absence_report_run_performed=0
absence_report_written=0

keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
runtime_authority_granted=0
production_installer_ready=0
```

Validation

This contract is guarded by:

```
sh scripts/test-macos-reset-uninstall-receipt-schema-contract.sh
```

Expected output:

```
macos_reset_uninstall_receipt_schema_contract: ok
```

Non-Claims

This contract is not macOS reset evidence, macOS uninstall evidence, macOS install evidence, macOS app bundle evidence, receipt evidence, absence verification evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, Apple platform approval, or runtime authority.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_USER_LOCAL_APP_BUNDLE_CONTRACT.md

Source title: macOS User-Local App Bundle Contract

Lines: 269 | Words: 753 | SHA-256: 3145fcb7fa102c4dc6c9a26622e76cea89c1443087e98e7b8cafa79ba7c7170a

macOS User-Local App Bundle Contract

Status: macOS user-local app bundle contract Date: 2026-05-25 CDT Scope: exact app bundle, managed marker, reset/uninstall, and verification transcript requirements before any macOS app bundle writer exists.

Purpose

This contract defines the minimum shape a future macOS user-local Latticra Panel app bundle writer must satisfy.

It follows the macOS dry-run plan adapter and remains contract-only. It does not create an app bundle, write files, install wrappers, mutate shell profiles, use launchd, access Keychain, request TCC permissions, use Endpoint Security, use System Extensions, use Network Extensions, open the network, or grant runtime authority.

Required User-Local Roots

The only supported first writer roots are:

```
application_support_prefix=$HOME/Library/Application Support/Latticra
app_bundle=$HOME/Applications/Latticra Panel.app
cli_bin=$HOME/.local/bin
logs_dir=$HOME/Library/Logs/Latticra
caches_dir=$HOME/Library/Caches/Latticra
reset_receipts_dir=$HOME/Library/Application Support/Latticra Reset Receipts
```

The writer must refuse:

```
/Applications
/Library
/System
/usr/local
/opt/homebrew
LaunchDaemons
system LaunchAgents
kernel extension paths
system extension paths
network extension paths
privileged helper paths
```

Exact App Bundle Files

A future writer may create only this managed app bundle shape:

```
$HOME/Applications/Latticra Panel.app/
  Contents/
    Info.plist
    MacOS/
      latticra-panel
    Resources/
      latticra-panel.icns
      latticra/
        MANAGED_BY_LATTICRA
        bundle-manifest.txt
```

Required bundle file meanings:

```
| File | Requirement |
| --- | --- |
| `Contents/Info.plist` | Property-list metadata for the local app bundle only. |
```

```
| `Contents/MacOS/latticra-panel` | Future copied Panel executable; must be executable. |
| `Contents/Resources/latticra-panel.icns` | Future icon asset; may be generated or converted in
 a separate lane. |
| `Contents/Resources/latticra/MANAGED_BY_LATTICRA` | Managed marker proving the bundle is
removable by Latticra. |
| `Contents/Resources/latticra/bundle-manifest.txt` | Deterministic bundle file list and
measurements. |
```

Info.plist Requirements

The future Info.plist must include:

```
CFBundleName=Latticra Panel
CFBundleDisplayName=Latticra Panel
CFBundleIdentifier=systems.latticra.panel
CFBundleExecutable=latticra-panel
CFBundlePackageType=APPL
CFBundleShortVersionString=&lt;panel-version&gt;
CFBundleVersion=&lt;build-or-date-version&gt;
LSMinimumSystemVersion=&lt;supported-version&gt;
NSHighResolutionCapable=true
```

The first writer must not request privacy-sensitive usage strings unless a separate TCC contract exists. It must not include LaunchAgent, login item, background item, privileged helper, network extension, system extension, or Endpoint Security activation behavior.

Application Support Files

A future writer may create only this managed Application Support shape:

```
$HOME/Library/Application Support/Latticra/
  MANAGED_BY_LATTICRA
  etc/
    latticra/
      installer-config.toml
      macos-plan.txt
  lib/
    latticra/
      payload-manifest.txt
  receipts/
    latest-receipt.txt
    macos-app-bundle-install-receipt-&lt;timestamp&gt;.txt
    manifest-&lt;timestamp&gt;.sha256
```

The Application Support marker must include:

```
LATTICRA_INSTALLER_MANAGED=1
LATTICRA_MACOS_USER_LOCAL_APP_BUNDLE=1
root_authority=0
network_authority=0
runtime_enforcement_authority=0
```

CLI Wrapper Contract

Future wrapper files may be created only under:

```
$HOME/.local/bin/latticra
$HOME/.local/bin/lat
$HOME/.local/bin/latticra-seal
$HOME/.local/bin/latticra-nadia
$HOME/.local/bin/latticra-panel
```

Each wrapper must include:

```
# LATTICRA_INSTALLER_MANAGED=1
# LATTICRA_MACOS_USER_LOCAL_APP_BUNDLE=1
```

The first writer must not mutate .zshrc, .zprofile, .bashrc, .bash_profile, fish config, shell profile files, PATH settings, Homebrew prefixes, /usr/local, or /opt/homebrew.

Receipt Requirements

The future install receipt must record:

```
receipt_kind=macos-user-local-app-bundle-install
application_support_prefix=&lt;path&gt;
```

```
app_bundle=&lt;path&gt;
cli_bin=&lt;path&gt;
bundle_manifest=&lt;path&gt;
payload_manifest=&lt;path&gt;
root_authority=0
network_authority=0
runtime_enforcement_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

Receipts for reset or uninstall must be written outside any prefix being removed:

```
reset_receipts_dir=$HOME/Library/Application Support/Latticra Reset Receipts
```

Reset And Uninstall Contract

Reset/uninstall may remove only managed artifacts:

```
$HOME/Applications/Latticra Panel.app
$HOME/Library/Application Support/Latticra
$HOME/.local/bin/latticra
$HOME/.local/bin/lat
$HOME/.local/bin/latticra-seal
$HOME/.local/bin/latticra-nadia
$HOME/.local/bin/latticra-panel
```

Removal is allowed only when the target contains a managed marker:

```
LATTICRA_INSTALLER_MANAGED=1
LATTICRA_MACOS_USER_LOCAL_APP_BUNDLE=1
```

If a marker is missing, the remover must preserve the target and report:

```
preserved_unmanaged_target=1
```

Reset/uninstall must not remove user logs, user caches, shell profiles, Keychain items, LaunchAgents, Login Items, application support outside the Latticra prefix, Homebrew files, /Applications, /Library, /System, /usr/local, or /opt/homebrew.

Verification Transcript

Before claiming macOS user-local app bundle install evidence, a transcript must record:

```
ok: app bundle -&gt; $HOME/Applications/Latticra Panel.app
ok: Info.plist -&gt; $HOME/Applications/Latticra Panel.app/Contents/Info.plist
ok: app executable -&gt; $HOME/Applications/Latticra Panel.app/Contents/MacOS/latticra-panel
ok: app resources -&gt; $HOME/Applications/Latticra Panel.app/Contents/Resources
ok: app managed marker -&gt; $HOME/Applications/Latticra
Panel.app/Contents/Resources/latticra/MANAGED_BY_LATTICRA
ok: application support prefix -&gt; $HOME/Library/Application Support/Latticra
ok: application support marker -&gt; $HOME/Library/Application Support/Latticra/
MANAGED_BY_LATTICRA
ok: receipts -&gt; $HOME/Library/Application Support/Latticra/receipts
ok: latticra-panel wrapper -&gt; $HOME/.local/bin/latticra-panel
ok: reset dry-run preserves unmanaged targets
ok: unsafe path blocked
```

The transcript must also record:

```
app_bundle_created=1
host_mutation_scope=user-local-managed
root_authority=0
network_authority=0
launchagent_authority=0
keychain_authority=0
tcc_bypass_authority=0
endpoint_security_authority=0
system_extension_authority=0
network_extension_authority=0
privileged_helper_authority=0
production_installer_ready=0
```

This transcript requirement does not mean such evidence exists today.

Current Contract Status

```
macos_user_local_app_bundle_contract_present=1
macos_app_bundle_writer_present=0
macos_app_bundle_created=0
macos_install_verified=0
macos_reset_uninstall_implemented=0
macos_verification_transcript_present=0
host_mutation_performed=0
network_performed=0
```

Validation

This contract is guarded by:

```
sh scripts/test-macos-user-local-app-bundle-contract.sh
```

Expected output:

```
macos_user_local_app_bundle_contract: ok
```

Non-Claims

This contract is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

Next Recommended Lane

```
Add a no-effect macOS app bundle writer dry-run prototype that emits the planned phase report,
validates unsafe paths, and keeps commit_user_local_managed_artifacts=0.
```

docs/MACOS_USER_LOCAL_APP_BUNDLE_IMPLEMENTATION_PLAN.md

Source title: macOS User-Local App Bundle Implementation Plan

Lines: 254 | Words: 741 | SHA-256: da77c8847ae801bcf8462cd38af38e44b07f1235ca97ceba15cfff25fb98b4bb

macOS User-Local App Bundle Implementation Plan

Status: no-effect macOS user-local app bundle implementation plan Date: 2026-05-25 CDT Scope: writer phases, failure behavior, reset/uninstall sequencing, verification commands, and guard tests before any app bundle writer exists.

Purpose

This plan defines how a future macOS user-local Latticra Panel app bundle writer should be implemented.

It follows the macOS user-local app bundle contract and remains no-effect planning. It does not create an app bundle, write Application Support files, install wrappers, mutate shell profiles, build the Panel, use launchd, access Keychain, request TCC permissions, use Endpoint Security, use System Extensions, use Network Extensions, open the network, or grant runtime authority.

Required Inputs

A future writer must require these inputs before any write path is enabled:

```
macos_build_platform_probe_present=1
macos_dry_run_plan_adapter_present=1
macos_user_local_app_bundle_contract_present=1
path_guard_status=allowed-user-local-dry-run
dry_run_allowed=1
application_support_prefix=$HOME/Library/Application Support/Latticra
app_bundle=$HOME/Applications/Latticra Panel.app
cli_bin=$HOME/.local/bin
```

The writer must fail closed if any input is missing or if a path expands outside the user-local allowlist.

Writer Phase Plan

The future writer must use explicit phases:

```
phase_1=validate_macos_host_and_toolchain_probe
phase_2=validate_user_local_paths_and_contract
phase_3=inspect_existing_targets_for_managed_markers
phase_4=stage_app_bundle_manifest_and_infoplist
phase_5=stage_panel_executable_and_icon_inputs
phase_6=stage_application_support_layout
phase_7=stage_cli_wrappers
phase_8=commit_user_local_managed_artifacts
phase_9=write_receipts_and_measurements
phase_10=run_verification_transcript
```

The first implementation slice should support report-only phase rendering before enabling commit behavior:

```
phase_report_only=1
commit_user_local_managed_artifacts=0
```

Phase Requirements

Phase 1 must record:

```
macos_host_detected=&lt;0-or-1&gt;
host_arch=&lt;architecture&gt;
clang_probe_recorded=&lt;0-or-1&gt;
rust_probe_recorded=1
panel_build_ready=&lt;0-or-1&gt;
c_test_build_ready=&lt;0-or-1&gt;
```

Phase 2 must re-run path guards and refuse:

```
/Applications
/Library
/System
/usr/local
/opt/homebrew
LaunchDaemons
system LaunchAgents
kernel extension paths
system extension paths
network extension paths
privileged helper paths
```

Phase 3 must preserve any existing target that lacks both markers:

```
LATTICRA_INSTALLER_MANAGED=1
LATTICRA_MACOS_USER_LOCAL_APP_BUNDLE=1
```

Phase 4 must render an Info.plist plan with:

```
CFBundleIdentifier=systems.latticra.panel
CFBundleExecutable=latticra-panel
CFBundlePackageType=APPL
NSHighResolutionCapable=true
```

Phase 5 must require a local Panel executable candidate and icon candidate before real writes. The macOS dry-run writer candidate integration proves this phase can become ready in dry-run only when the local candidate asset probe and writer dry-run agree. It must not download, build, sign, notarize, or generate network-dependent assets.

The macOS commit gate contract keeps Phase 8 closed until a future managed-write implementation, reset/uninstall implementation, and verification transcript evidence exist. The macOS verification transcript contract now defines the required evidence shape, but no verification transcript evidence exists yet.

Phase 6 must stage:

```
MANAGED_BY_LATTICRA
etc/latticra/installer-config.toml
etc/latticra/macos-plan.txt
```

```
lib/latticra/payload-manifest.txt
receipts/
```

Phase 7 must stage wrappers only under:

```
$HOME/.local/bin
```

Phase 8 may commit only after all staged files have passed validation and only if every existing target is either absent or managed by Latticra.

Phase 9 must write receipts after successful managed writes and must record all authority-denial fields.

Phase 10 must run the verification transcript and fail if any required transcript line is missing.

Failure Behavior

The future writer must fail closed:

```
unsafe_path_detected -&gt; block_before_write
unmanaged_existing_app_bundle -&gt; preserve_and_block
unmanaged_existing_wrapper -&gt; preserve_and_block
missing_panel_executable -&gt; block_before_write
missing_icon_asset -&gt; block_before_write
missing_contract_marker -&gt; block_before_write
receipt_write_failure -&gt; report_failure_without_claiming_install_verified
verification_failure -&gt; report_failure_without_claiming_install_verified
```

Failure must not trigger:

```
sudo
network_download
homebrew_install
shell_profile_mutation
launchagent_install
keychain_write
tcc_prompt
endpoint_security_activation
system_extension_activation
privileged_helper_install
```

Reset And Uninstall Sequencing

Future reset/uninstall must use these phases:

```
reset_phase_1=validate_user_local_targets
reset_phase_2=inspect_managed_markers
reset_phase_3=preserve_unmanaged_targets
reset_phase_4=remove_managed_wrappers
reset_phase_5=remove_managed_app_bundle
reset_phase_6=remove_managed_application_support_prefix
reset_phase_7=write_reset_or_uninstall_receipt_outside_removed_prefix
reset_phase_8=emit_verification_absence_report
```

Reset/uninstall must preserve:

```
user_logs
user_caches
shell_profiles
Keychain_items
LaunchAgents
Login_Items
Homebrew_files
/Applications
/Library
/System
/usr/local
/opt/homebrew
```

Verification Commands

The implementation plan is guarded by:

```
sh scripts/test-macos-user-local-app-bundle-implementation-plan.sh
```

When a future writer exists, the minimum verification set should include:

```
sh scripts/macos-build-platform-probe.sh
sh scripts/macos-dry-run-plan-adapter.sh
sh scripts/test-macos-user-local-app-bundle-contract.sh
sh scripts/test-macos-user-local-app-bundle-implementation-plan.sh
```

Future writer-specific tests must cover:

```
default dry-run phase rendering
unsafe path blocked before write
unmanaged app bundle preserved
unmanaged CLI wrapper preserved
missing executable blocks before write
missing icon blocks before write
receipt fields complete
verification transcript complete
reset dry-run preserves unmanaged targets
uninstall receipt outside removed prefix
```

Current Plan Status

```
macos_user_local_app_bundle_implementation_plan_present=1
macos_app_bundle_writer_present=0
macos_app_bundle_writer_dry_run_present=1
macos_local_candidate_asset_probe_present=1
macos_dry_run_writer_candidate_integration_present=1
macos_commit_gate_contract_present=1
macos_verification_transcript_contract_present=1
macos_app_bundle_created=0
macos_install_verified=0
macos_reset_uninstall_implemented=0
macos_verification_transcript_present=0
application_support_write_performed=0
app_bundle_write_performed=0
cli_wrapper_write_performed=0
host_mutation_performed=0
network_performed=0
```

Non-Claims

This plan is not macOS installation, macOS app bundle evidence, signed app evidence, notarization evidence, launchd evidence, Keychain evidence, Secure Enclave evidence, sandbox evidence, TCC approval evidence, Endpoint Security evidence, System Extension evidence, Network Extension evidence, privileged helper evidence, malware prevention, ransomware prevention, production readiness, or Apple platform approval.

Previous Recommended Lane

```
Add a macOS reset/uninstall evidence-bundle contract that groups implementation-gate,
operator-intent, receipt, absence, planner, and classifier evidence before any live execution.
```

Next Recommended Lane

```
Add a macOS reset/uninstall live-runner acceptance-denial disposition closeout audit review
disposition closeout contract that closes the reviewed no-effect closeout audit review
disposition without opening dispatch or deletion.
```

docs/MACOS_VERIFICATION_TRANSCRIPT_CONTRACT.md

Source title: macOS Verification Transcript Contract

Lines: 229 | Words: 456 | SHA-256: 3042e53ba1b1f22d0748ea49308f3e1c4b578893e15a8a0e4e8c5255388cb77a

macOS Verification Transcript Contract

Status: no-effect macOS verification transcript contract Date: 2026-05-25 CDT Scope: contract for exact post-write evidence before a future user-local macOS app bundle install can be called verified.

Purpose

This contract defines the verification transcript that a future macOS user-local app bundle writer must produce after managed writes.

It is contract-only. It does not create an app bundle, write a transcript, verify an install, run a reset or uninstall, mutate host state, request platform authority, or claim macOS installation.

The macOS commit gate may recognize this contract as present, and the macOS reset/uninstall dry-run contract now defines the required reset evidence shape. The gate remains closed until managed writes, reset/uninstall evidence, and real transcript evidence exist.

Command

```
sh scripts/macos-verification-transcript-contract.sh
```

The command writes only a deterministic report to stdout.

Current Decision

The current transcript posture is:

```
macos_verification_transcript_contract_present=1
verification_transcript_contract_state=defined-no-effect
verification_transcript_contract_decision=contract-defined-evidence-not-present
verification_transcript_evidence_present=0
macos_install_verified=0
commit_user_local_managed_artifacts=0
```

Expected Targets

The future transcript must bind evidence to the exact user-local targets:

```
app_support_prefix_expected=$HOME/Library/Application Support/Latticra
app_bundle_expected=$HOME/Applications/Latticra Panel.app
cli_wrapper_expected=$HOME/.local/bin/latticra-panel
receipts_dir_expected=$HOME/Library/Application Support/Latticra/receipts
bundle_identifier_expected=systems.latticra.panel
bundle_executable_expected=latticra-panel
```

Required Transcript Lines

A future verification transcript must include all of:

```
transcript_line_host_identity_required=1
transcript_line_architecture_required=1
transcript_line_app_bundle_path_required=1
transcript_line_info_plist_identifier_required=1
transcript_line_panel_executable_digest_required=1
transcript_line_icon_asset_digest_required=1
transcript_line_application_support_marker_required=1
transcript_line_cli_wrapper_marker_required=1

transcript_line_authority_denials_required=1
transcript_line_candidate_flow_required=1
transcript_line_commit_gate_required=1
transcript_line_reset_uninstall_dry_run_required=1
```

Required Evidence

Before any future status may say macos_install_verified=1, evidence must show all of:

```
host_os_macos_recorded_required=1
architecture_recorded_required=1
managed_app_bundle_present_required=1
info_plist_present_required=1
info_plist_bundle_identifier_required=1
app_executable_present_required=1
app_executable_executable_required=1
app_executable_digest_required=1
icon_asset_present_required=1
icon_asset_digest_required=1
application_support_marker_required=1
cli_wrapper_present_required=1
cli_wrapper_marker_required=1
receipts_present_required=1
receipt_completeness_required=1
authority_denial_fields_required=1
```

```
candidate_integration_ready_required=1
commit_gate_closed_until_evidence_required=1

docs/VISUAL_THEOREM_ENGINES.md

Source title: Latticra Visual Theorem Engines

Lines: 70 | Words: 272 | SHA-256: c9b0b6614bb19d9a6642fe121c429e107deef440eee9e6cb37f6cb8b9e46dce4

Latticra Visual Theorem Engines

Latticra includes C-based visual theorem engines that render symbolic substrate models as MP4 video demonstrations.

These engines are not ordinary animations. They are visual field demonstrations of the Latticra idea: lattice nodes, matrix substrate behavior, recursive numeric order, modular expansion, abstraction containment, axiom fracture, particle-field unification, quantum deceleration, and regenesis from a null-state.

Engines

latt-field-engines/substrate-engine/

The figure-free Latticra Substrate Engine.

This version removes the human-like center figure and focuses entirely on the field itself. It renders the Latticra substrate as a moving 2D mathematical plane containing:

- Primordial substrate closure
- Matrix substrate structure
- Sigkokilla Modul expansion
- Abstraction-field containment
- Axiomatic fracture
- Particle unification
- Quantum deceleration
- Cosmic regenesis

latt-field-engines/visual-theorem-engine/

The original cinematic theorem engine.

This version includes a central operator figure and demonstrates the earlier theorem-card aesthetic as a moving symbolic system.

Build

From the repository root:

```
scripts/render-visual-theorem-engines.sh build
```

Render the substrate engine

```
scripts/render-visual-theorem-engines.sh substrate 96
```

Output:

```
build/visual-engines/latticra-substrate-engine.mp4
```

Render the theorem engine

```
scripts/render-visual-theorem-engines.sh theorem 60
```

Output:

```
build/visual-engines/latticra-theorem-engine.mp4
```

Render both

```
scripts/render-visual-theorem-engines.sh all 96
```

Requirements

- gcc
- ffmpeg
- standard C math library, linked with -lm

On Fedora:

sudo dnf install gcc ffmpeg

Theory summary

The visual theorem engines posit Latticra as a symbolic computation substrate where field structures can be represented as lattices, split into substructures, projected onto a 2D abstraction plane, decelerated toward coherence, unified into particle-field classes, and regenerated from a null-state through deterministic operators.

The project is best understood as a mathematical art-engine and speculative computation model: part visual proof sketch, part symbolic systems theory, and part Latticra identity piece.

LICENSE

Source title: License

Lines: 80 | Words: 242 | SHA-256: 22e37d29767cb1493cf186b495a216b50a975a09bdc7bb0f3344575dcc2e956e

Latticra Licensing ==================

Latticra uses a transition-aware hybrid open licensing model.

Summary -------

```
Core/runtime/security substrate: AGPL-3.0-or-later
SDKs, examples, packaging helpers, installer glue, and integration helpers: Apache-2.0
Documentation, handbooks, architecture notes, and policy notes: CC-BY-4.0
Latticra/Bryforge names, logos, marks, and identity: TRADEMARK_POLICY.md
```

Core runtime, security-substrate, tool-boundary, runtime-gating, verification, and evidence-bound software work is licensed, or intended for new work to be licensed, under:

AGPL-3.0-or-later

SDKs, examples, packaging helpers, installer glue, integration helpers, and other adoption-facing software are licensed under:

Apache-2.0

Documentation, handbooks, architecture notes, policy notes, and public reader-facing project material are licensed under:

CC-BY-4.0

The Latticra and Bryforge names, logos, marks, slogans, and distinctive identity are not open-licensed by default. They are governed separately by:

TRADEMARK_POLICY.md

Transition Rule ---------------

Existing repository code remains Apache-2.0 unless a file-level SPDX identifier, path-level notice, or later reviewed migration explicitly marks it otherwise.

New core software work should use:

SPDX-License-Identifier: AGPL-3.0-or-later

New adoption-facing helper code should use:

SPDX-License-Identifier: Apache-2.0

Documentation should use:

SPDX-License-Identifier: CC-BY-4.0

Canonical Texts ---------------

Local copies of referenced license texts are stored in:

LICENSES/AGPL-3.0-or-later.txt LICENSES/Apache-2.0.txt LICENSES/CC-BY-4.0.txt

File-level SPDX identifiers and path-level notices control when they are more specific than this overview.

No Trademark Grant ------------------

Software and documentation licenses do not grant trademark, branding, endorsement, sponsorship, or official-project identity rights.

Non-Legal-Advice Boundary -------------------------

This file records the project licensing posture and is not legal advice. Formal relicensing, commercial distribution, patent strategy, trademark registration, or release review should receive qualified legal review.

LICENSES/AGPL-3.0-or-later.txt

Source title: Agpl 3.0 Or Later

GNU AFFERO GENERAL PUBLIC LICENSE Version 3, 19 November 2007

Preamble

The GNU Affero General Public License is a free, copyleft license for software and other kinds of works, specifically designed to ensure cooperation with the community in the case of network server software.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, our General Public Licenses are intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

Developers that use our General Public Licenses protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License which gives you legal permission to copy, distribute and/or modify the software.

A secondary benefit of defending all users' freedom is that improvements made in alternate versions of the program, if they receive widespread use, become available for other developers to incorporate. Many developers of free software are heartened and encouraged by the resulting cooperation. However, in the case of software used on network servers, this result may fail to come about. The GNU General Public License permits making a modified version and letting the public access it on a server without ever releasing its source code to the public.

The GNU Affero General Public License is designed specifically to ensure that, in such cases, the modified source code becomes available to the community. It requires the operator of a network server to provide the source code of the modified version running there to the users of that server. Therefore, public use of a modified version, on a publicly accessible server, gives the public access to the source code of the modified version.

An older license, called the Affero General Public License and published by Affero, was designed to accomplish similar goals. This is a different license, not a version of the Affero GPL, but Affero has released a new version of the Affero GPL which permits relicensing under this license.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU Affero General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section

7. This requirement modifies the requirement in section 4 to

"keep intact all notices".

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Remote Network Interaction; Use with the GNU General Public License.

Notwithstanding any other provision of this License, if you modify the Program, your modified version must prominently offer all users interacting with it remotely through a computer network (if your version supports such interaction) an opportunity to receive the Corresponding Source of your version by providing access to the Corresponding Source from a network server at no charge, through some standard or customary means of facilitating copying of software. This Corresponding Source shall include the Corresponding Source for any work covered by version 3 of the GNU General Public License that is incorporated pursuant to the following paragraph.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the work with which it is combined will remain governed by version 3 of the GNU General Public License.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU Affero General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU Affero General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU Affero General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU Affero General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.> Copyright (C) <year> <name of author>

This program is free software: you can redistribute it and/or modify it under the terms of the GNU Affero General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Affero General Public License for more details.

You should have received a copy of the GNU Affero General Public License along with this program. If not, see <https://www.gnu.org/licenses/>.

Also add information on how to contact you by electronic and paper mail.

If your software can interact with users remotely through a computer network, you should also make sure that it provides a way for users to get its source. For example, if your program is a web application, its interface could display a "Source" link that leads users to an archive of the code. There are many ways you could offer source, and different solutions will be better for different programs; see section 13 for the specific requirements.

You should also get your employer (if you work as a programmer) or school, if any, to sign a "copyright disclaimer" for the program, if necessary. For more information on this, and how to apply and follow the GNU AGPL, see <https://www.gnu.org/licenses/>.

Apache License Version 2.0, January 2004 http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the

Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or

agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,

whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing

the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Creative Commons Corporation ("Creative Commons") is not a law firm and does not provide legal services or legal advice. Distribution of Creative Commons public licenses does not create a lawyer-client or other relationship. Creative Commons makes its licenses and related information available on an "as-is" basis. Creative Commons gives no warranties regarding its licenses, any material licensed under their terms and conditions, or any related information. Creative Commons disclaims all liability for damages resulting from their use to the fullest extent possible.

Using Creative Commons Public Licenses

Creative Commons public licenses provide a standard set of terms and conditions that creators and other rights holders may use to share original works of authorship and other material subject to copyright and certain other rights specified in the public license below. The following considerations are for informational purposes only, are not exhaustive, and do not form part of our licenses.

Considerations for licensors: Our public licenses are intended for use by those authorized to give the public permission to use material in ways otherwise restricted by copyright and certain other rights. Our licenses are irrevocable. Licensors should read and understand the terms and conditions of the license they choose before applying it. Licensors should also secure all rights necessary before applying our licenses so that the public can reuse the material as expected. Licensors should clearly mark any material not subject to the license. This includes other CC- licensed material, or material used under an exception or limitation to copyright. More considerations for licensors: wiki.creativecommons.org/Considerations_for_licensors

Considerations for the public: By using one of our public licenses, a licensor grants the public permission to use the licensed material under specified terms and conditions. If the licensor's permission is not necessary for any reason--for example, because of any applicable exception or limitation to copyright--then that use is not regulated by the license. Our licenses grant only permissions under copyright and certain other rights that a licensor has authority to grant. Use of the licensed material may still be restricted for other reasons, including because others have copyright or other rights in the material. A licensor may make special requests, such as asking that all changes be marked or described. Although not required by our licenses, you are encouraged to respect those requests where reasonable. More considerations for the public: wiki.creativecommons.org/Considerations_for_licensees

Creative Commons Attribution 4.0 International Public License

By exercising the Licensed Rights (defined below), You accept and agree to be bound by the terms and conditions of this Creative Commons Attribution 4.0 International Public License ("Public License"). To the extent this Public License may be interpreted as a contract, You are granted the Licensed Rights in consideration of Your acceptance of these terms and conditions, and the Licensor grants You such rights in consideration of benefits the Licensor receives from making the Licensed Material available under these terms and conditions.

Section 1 -- Definitions.

a. Adapted Material means material subject to Copyright and Similar Rights that is derived from or based upon the Licensed Material and in which the Licensed Material is translated, altered, arranged, transformed, or otherwise modified in a manner requiring permission under the Copyright and Similar Rights held by the Licensor. For purposes of this Public License, where the Licensed Material is a musical work, performance, or sound recording, Adapted Material is always produced where the Licensed Material is synched in timed relation with a moving image.

b. Adapter's License means the license You apply to Your Copyright and Similar Rights in Your contributions to Adapted Material in accordance with the terms and conditions of this Public License.

c. Copyright and Similar Rights means copyright and/or similar rights closely related to copyright including, without limitation, performance, broadcast, sound recording, and Sui Generis Database Rights, without regard to how the rights are labeled or categorized. For purposes of this Public License, the rights specified in Section 2(b)(1)-(2) are not Copyright and Similar Rights.

d. Effective Technological Measures means those measures that, in the absence of proper authority, may not be circumvented under laws fulfilling obligations under Article 11 of the WIPO Copyright Treaty adopted on December 20, 1996, and/or similar international agreements.

e. Exceptions and Limitations means fair use, fair dealing, and/or any other exception or limitation to Copyright and Similar Rights that applies to Your use of the Licensed Material.

f. Licensed Material means the artistic or literary work, database, or other material to which the Licensor applied this Public License.

g. Licensed Rights means the rights granted to You subject to the terms and conditions of this Public License, which are limited to all Copyright and Similar Rights that apply to Your use of the Licensed Material and that the Licensor has authority to license.

h. Licensor means the individual(s) or entity(ies) granting rights under this Public License.

i. Share means to provide material to the public by any means or process that requires permission under the Licensed Rights, such as reproduction, public display, public performance, distribution, dissemination, communication, or importation, and to make material available to the public including in ways that members of the public may access the material from a place and at a time individually chosen by them.

j. Sui Generis Database Rights means rights other than copyright resulting from Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, as amended and/or succeeded, as well as other essentially equivalent rights anywhere in the world.

k. You means the individual or entity exercising the Licensed Rights under this Public License. Your has a corresponding meaning.

Section 2 -- Scope.

a. License grant.

1. Subject to the terms and conditions of this Public License,

the Licensor hereby grants You a worldwide, royalty-free, non-sublicensable, non-exclusive, irrevocable license to exercise the Licensed Rights in the Licensed Material to:

a. reproduce and Share the Licensed Material, in whole or in part; and

b. produce, reproduce, and Share Adapted Material.

2. Exceptions and Limitations. For the avoidance of doubt, where

Exceptions and Limitations apply to Your use, this Public License does not apply, and You do not need to comply with its terms and conditions.

3. Term. The term of this Public License is specified in Section

6(a).

4. Media and formats; technical modifications allowed. The

Licensor authorizes You to exercise the Licensed Rights in all media and formats whether now known or hereafter created, and to make technical modifications necessary to do so. The Licensor waives and/or agrees not to assert any right or authority to forbid You from making technical modifications necessary to exercise the Licensed Rights, including technical modifications necessary to circumvent Effective Technological Measures. For purposes of this Public License, simply making modifications authorized by this Section 2(a) (4) never produces Adapted Material.

5. Downstream recipients.

a. Offer from the Licensor -- Licensed Material. Every recipient of the Licensed Material automatically receives an offer from the Licensor to exercise the Licensed Rights under the terms and conditions of this Public License.

b. No downstream restrictions. You may not offer or impose any additional or different terms or conditions on, or apply any Effective Technological Measures to, the Licensed Material if doing so restricts exercise of the Licensed Rights by any recipient of the Licensed Material.

6. No endorsement. Nothing in this Public License constitutes or

may be construed as permission to assert or imply that You are, or that Your use of the Licensed Material is, connected with, or sponsored, endorsed, or granted official status by, the Licensor or others designated to receive attribution as provided in Section 3(a)(1)(A)(i).

b. Other rights.

1. Moral rights, such as the right of integrity, are not

licensed under this Public License, nor are publicity, privacy, and/or other similar personality rights; however, to the extent possible, the Licensor waives and/or agrees not to assert any such rights held by the Licensor to the limited extent necessary to allow You to exercise the Licensed Rights, but not otherwise.

2. Patent and trademark rights are not licensed under this

Public License.

3. To the extent possible, the Licensor waives any right to

collect royalties from You for the exercise of the Licensed Rights, whether directly or through a collecting society under any voluntary or waivable statutory or compulsory licensing scheme. In all other cases the Licensor expressly reserves any right to collect such royalties.

Section 3 -- License Conditions.

Your exercise of the Licensed Rights is expressly made subject to the following conditions.

a. Attribution.

1. If You Share the Licensed Material (including in modified

form), You must:

a. retain the following if it is supplied by the Licensor with the Licensed Material:

i. identification of the creator(s) of the Licensed Material and any others designated to receive attribution, in any reasonable manner requested by the Licensor (including by pseudonym if designated);

ii. a copyright notice;

iii. a notice that refers to this Public License;

iv. a notice that refers to the disclaimer of warranties;

v. a URI or hyperlink to the Licensed Material to the extent reasonably practicable;

b. indicate if You modified the Licensed Material and retain an indication of any previous modifications; and

c. indicate the Licensed Material is licensed under this Public License, and include the text of, or the URI or hyperlink to, this Public License.

2. You may satisfy the conditions in Section 3(a)(1) in any

reasonable manner based on the medium, means, and context in which You Share the Licensed Material. For example, it may be reasonable to satisfy the conditions by providing a URI or hyperlink to a resource that includes the required information.

3. If requested by the Licensor, You must remove any of the

information required by Section 3(a)(1)(A) to the extent reasonably practicable.

4. If You Share Adapted Material You produce, the Adapter's

License You apply must not prevent recipients of the Adapted Material from complying with this Public License.

Section 4 -- Sui Generis Database Rights.

Where the Licensed Rights include Sui Generis Database Rights that apply to Your use of the Licensed Material:

a. for the avoidance of doubt, Section 2(a)(1) grants You the right to extract, reuse, reproduce, and Share all or a substantial portion of the contents of the database;

b. if You include all or a substantial portion of the database contents in a database in which You have Sui Generis Database Rights, then the database in which You have Sui Generis Database Rights (but not its individual contents) is Adapted Material; and

c. You must comply with the conditions in Section 3(a) if You Share all or a substantial portion of the contents of the database.

For the avoidance of doubt, this Section 4 supplements and does not replace Your obligations under this Public License where the Licensed Rights include other Copyright and Similar Rights.

Section 5 -- Disclaimer of Warranties and Limitation of Liability.

a. UNLESS OTHERWISE SEPARATELY UNDERTAKEN BY THE LICENSOR, TO THE EXTENT POSSIBLE, THE LICENSOR OFFERS THE LICENSED MATERIAL AS-IS AND AS-AVAILABLE, AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE LICENSED MATERIAL, WHETHER EXPRESS, IMPLIED, STATUTORY, OR OTHER. THIS INCLUDES, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NON-INFRINGEMENT, ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE OR ABSENCE OF ERRORS, WHETHER OR NOT KNOWN OR DISCOVERABLE. WHERE DISCLAIMERS OF WARRANTIES ARE NOT ALLOWED IN FULL OR IN PART, THIS DISCLAIMER MAY NOT APPLY TO YOU.

b. TO THE EXTENT POSSIBLE, IN NO EVENT WILL THE LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY (INCLUDING, WITHOUT LIMITATION, NEGLIGENCE) OR OTHERWISE FOR ANY DIRECT, SPECIAL, INDIRECT, INCIDENTAL, CONSEQUENTIAL, PUNITIVE, EXEMPLARY, OR OTHER LOSSES, COSTS, EXPENSES, OR DAMAGES ARISING OUT OF THIS PUBLIC LICENSE OR USE OF THE LICENSED MATERIAL, EVEN IF THE LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH LOSSES, COSTS, EXPENSES, OR DAMAGES. WHERE A LIMITATION OF LIABILITY IS NOT ALLOWED IN FULL OR IN PART, THIS LIMITATION MAY NOT APPLY TO YOU.

c. The disclaimer of warranties and limitation of liability provided above shall be interpreted in a manner that, to the extent possible, most closely approximates an absolute disclaimer and waiver of all liability.

Section 6 -- Term and Termination.

a. This Public License applies for the term of the Copyright and Similar Rights licensed here. However, if You fail to comply with this Public License, then Your rights under this Public License terminate automatically.

b. Where Your right to use the Licensed Material has terminated under Section 6(a), it reinstates:

1. automatically as of the date the violation is cured, provided

it is cured within 30 days of Your discovery of the violation; or

2. upon express reinstatement by the Licensor.

For the avoidance of doubt, this Section 6(b) does not affect any right the Licensor may have to seek remedies for Your violations of this Public License.

c. For the avoidance of doubt, the Licensor may also offer the Licensed Material under separate terms or conditions or stop distributing the Licensed Material at any time; however, doing so will not terminate this Public License.

d. Sections 1, 5, 6, 7, and 8 survive termination of this Public License.

Section 7 -- Other Terms and Conditions.

a. The Licensor shall not be bound by any additional or different terms or conditions communicated by You unless expressly agreed.

b. Any arrangements, understandings, or agreements regarding the Licensed Material not stated herein are separate from and independent of the terms and conditions of this Public License.

Section 8 -- Interpretation.

a. For the avoidance of doubt, this Public License does not, and shall not be interpreted to, reduce, limit, restrict, or impose conditions on any use of the Licensed Material that could lawfully be made without permission under this Public License.

b. To the extent possible, if any provision of this Public License is deemed unenforceable, it shall be automatically reformed to the minimum extent necessary to make it enforceable. If the provision cannot be reformed, it shall be severed from this Public License without affecting the enforceability of the remaining terms and conditions.

c. No term or condition of this Public License will be waived and no failure to comply consented to unless expressly agreed to by the Licensor.

d. Nothing in this Public License constitutes or may be interpreted as a limitation upon, or waiver of, any privileges and immunities that apply to the Licensor or You, including from the legal processes of any jurisdiction or authority.

LICENSES/README.md

Source title: Latticra License References

Lines: 73 | Words: 159 | SHA-256: f772b72a9cdf2158310b737bf8273fd48df388457a4f3a302d74e10c1e36e850

Latticra License References

Status: active license reference index

Purpose

This directory records license identifiers, local license texts, and policy references used by Latticra.

The root LICENSE file records the project hybrid licensing overview.

The detailed policy records are:

```
docs/OPEN_ECOSYSTEM_POLICY.md
docs/LICENSE_POLICY.md
docs/DOCUMENTATION_LICENSE.md
CONTRIBUTING.md
TRADEMARK_POLICY.md
```

Current identifiers

Current identifiers:

```
AGPL-3.0-or-later
Apache-2.0
CC-BY-4.0
```

Local license texts

Local copies of referenced license texts are stored at:

```
LICENSES/AGPL-3.0-or-later.txt
LICENSES/Apache-2.0.txt
LICENSES/CC-BY-4.0.txt
```

SPDX usage

New source files should include an SPDX license identifier.

Preferred new core software source identifier:

```
SPDX-License-Identifier: AGPL-3.0-or-later
```

Preferred new adoption-facing helper source identifier:

```
SPDX-License-Identifier: Apache-2.0
```

Preferred new documentation identifier:

```
SPDX-License-Identifier: CC-BY-4.0
```

Existing files should not be silently re-tagged. Path-by-path migration should happen through reviewed PRs.

Trademark boundary

Software and documentation licenses do not grant rights to use Latticra or Bryforge names, logos, marks, slogans, or identity in a confusing way.

See:
